

# What happens to my green bin waste?

Mixed paper, cardboard, cans, aerosols, plastic types 1, 2, 4. Bins are collected from the kerbside either monthly or fortnightly.

Bins are emptied into the vehicle at the kerbside. The materials are taken to a be processed at the MRF (Materials Recovery Facility) in Beeston.

Separated materials (e.g. aluminium cans, steel cans, newspapers/magazines, plastic bottles) at the kerbside.

At the MRF (Material recovery Facility – MRF) a variety of mechanical and manual sorting methods are used to separate the various materials. This also removes any contaminant (unwanted items) from the mixed material.

Once the materials are sorted they are then sold on the UK, European and global materials market.
