The volume of traffic using Wide Lane is extremely high. The council has installed two central islands and speed bumps adjacent to the entrance/exit of the Topcliffe estate to provide some means for the pedestrians to cross this 'river of death', I was going to say 'safely', however that is not the case since no definite break in traffic is provided. Presumably traffic lights are too expensive?

When driving, trying to exit the Topcliffe estate and enter the traffic flow can be quite a time consuming exercise, especially turning right during peak traffic times.

This again is the current situation not post development!

Wide Lane meets Dewsbury Lane, again an inordinately busy dual carriageway. Since the opening of the White Rose Centre the volume of traffic along this highway has increased massively and at peak times along with weekend shopping traffic this road cannot cope with extra traffic volumes and additional housing development will again exacerbate this situation.

Infrastructure

Medical services in the Morley area are already overstretched. Dental practices have no vacancies for additional patients. I know of people who have to attend practices at the other side of Leeds because of the local situation.

Doctors surgeries are close to the same situation with waiting times for an appointment spiralling.

Public transport (which for the area under consideration means bus service) is suffering along with all other road users from the increased volume of traffic and the condition of the road surfaces in this and the surrounding areas.

Roads are literally crumbling under the massive volume of traffic and there seems no coordinated scheme in place to effect repairs.

If the LDF is put in place by Leeds City Council, Morley will be as large as Harrogate but whereas Harrogate has its own hospital and full time fire service, Morley has neither.

Schools

It has already been stated in the local media that Morley secondary schools will be at 'full capacity' by 2016 and that does not take into account any new housing development in the area. Newlands Primary School is being rebuilt and expanded but again, the additional 250 places will only accommodate children already in the system.

Parking

The official estimate that every house will have 0.6 cars is farcical, most cars on modern estates have 2 to 3 cars and parking these additional cars is becoming a severe problem resulting in congested streets within the estates.

The Topcliffe estate off wide lane is a perfect example of this problem and householders there have been warned by the fire service that in the event of a fire lives could be at risk because of cars parked on both sides of the streets limiting access for the fire engines.

Surely the planners must know that the horse goes 'in front of the cart' and realise that the infrastructure of the area should be put in place to give a workable system before additional population expansion to avoid catastrophic overcrowding and misplacements which will only serve to worsen our already cramped living standards.

Housing

Wide Lane/Dewsbury Road, Morley

Name: Persimmon Homes

Representor No: PRS05691

Representation ID: REP06938 Question Ref: H7

We consider that site ref: 3069 should be identified as "Green Sites".

Representation ID: REP07054 Question Ref: H7

Site 3069

Firstly, we consider that the name used by the Council in its assessment is misleading. The White Rose Pub is located to the north of Wide Lane and is not, incidentally, considered as a potential future housing site. As such, we respectfully request that site ref: 3069 is renamed to "Owlers Farm Extension".

We do not agree with the red site classification. The site forms a logical extension to the Owlers Farm sites providing much needed housing capacity in a comprehensive and joined-up manner which will have minimal impact on existing residential area. While we agree with the assessment that development of this site in isolation could represent an isolated development, the fact that it is controlled by Persimmon (who also have controlling interests in adjoining sites), means that a comprehensive approach to delivery of this site is wholly achievable.

The site assessment shows that it is in an accessible location. It therefore appears that the site is classified as red due to its extant Green Belt allocation.

We do not consider this to be a robust reason for the "red site" classification of the site as the emerging Core Strategy sets out a commitment to review Green Belt Boundaries in order to accommodate the proposed level of housing growth.

Green Belt Assessment

Check the unrestricted sprawl of large built up areas

We do not agree that development of the site would represent isolated development. It is entirely logical and appropriate that site 3069 be brought forward in conjunction with sites 1279 and 1285. Site 3069 is well contained with established boundaries set by permanent physical infrastructure. This provides for definition, defensible and logical boundaries.

To assist in safeguarding the countryside from encroachment

Persimmon Homes objects that the grade of the site is 1, 2 or 3a agricultural land value. We therefore request that the Council provides further information on how it has reached this conclusion. See our comments above as to how the site is well contained.

Coalescence / Conclusion

We agree that development of the site will not lead to coalescence of settlements and that the site does not perform an important role in safeguarding the countryside from encroachment.

The Green Belt assessment is incorrect in that it does not represent isolated development. The site does not fulfil Green Belt purposes and development of it will not result in the coalescence of settlements. The site is well contained and bordered by well established physical boundaries. In terms of accessibility, the site is well served by public transport and is located within a reasonable walking distance of bus stops on Wide Lane.

We would recommend that the Council:

- ☐ Clarifies how it has assessed the distance to the rail station and bus stop.
- ☐ States that the site is available, suitable and achievable.
- ☐ States that the development of this site conforms with the Core Strategy and is a major settlement greenfield extension.
- ☐ Provides further information on the agricultural land classification assumption..
- ☐ Provides further information on what information it has used to rank the site.

See rep for full details

Representation ID: REP07054 Question Ref: H11

Sites 1279 and 3069 are available immediately for development. We consider that development can be achieved on the sites in the short term i.e. within 5 years and leading into the medium to longer term.

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Red Sites within the Core Public Transport Network

Table 5 below contains sites that are classified as 'Sites not considered suitable for allocation for housing' that fall within 400m of the current core bus network. From a public transport perspective, these sites (in principle) would be acceptable for housing development. For the larger sites, site specific mitigation would be required but it is unlikely that substantial bus service provision would be required at these sites (based on the current public transport network).

Representation ID: REP01655 Question Ref: H1

With numerous disused brownfield sites within the "outer south west" area it seems unbelievable that consideration is being given to the development of greenfield sites. The reason given by Leeds City Council that the brownfield sites are not to be developed is that remedial works would be too expensive. Should this be the case, it would suggest that these sites are heavily contaminated and pose a potential risk to human health and controlled waters. On this basis I would enquire why these sites are not being investigated as potential "Part 2A" sites. I feel it would make more sense developing the brownfield sites prior to targetting greenfield sites, as the risk and treatment of ground contamination is simply being ignored and delayed. Brownfield sites identified include but not limited to 2117, 2096, 2096A, 2096B, 2096C, 3075

Representation ID: REP01655 Question Ref: H3

Several brownfield sites as detailed earlier (namely 2096, 2096A - C, 3075' 3120, 1018A & B, 2127)

3075 Scrapyard, Thorpe Lane, Middleton – Whilst supposed to be Green Belt this site is currently in use as a scrap yard. Enforcement action is being sought by a Middleton Councillor. The site as it stands extends too far to the South and is not well enough connected to existing settlements. Access onto Thorpe Lane would also need to be well thought out given the bend in the road here.

Name: Neil Dawson

Representor No: PRS05884

Representation ID: REP06563 Question Ref: H7

Site 3075 Thorpe Lane, Middleton

This site is allocated as red but I suggest further consultation with local councillors and the local community to determine if the current allocation should change. It is classed as a Green Belt site but it is a scrapyard and has the look and feel of a Brownfield site.

Name: Michael Long

Representor No: PRS06750

Representation ID: REP07983 Question Ref: H7

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Red Sites within the Core Public Transport Network

Table 5 below contains sites that are classified as 'Sites not considered suitable for allocation for housing' that fall within 400m of the current core bus network. From a public transport perspective, these sites (in principle) would be acceptable for housing development. For the larger sites, site specific mitigation would be required but it is unlikely that substantial bus service provision would be required at these sites (based on the current public transport network).

[see table in full representation submitted which lists sites]

Representation ID: REP04606 Question Ref: H7

It seems a great deal of money and time has been spent on producing long documents for future development without giving any thought to how the infrastructure is going to cope which is already struggling.
I refer to these following residential sites and possible housing sites.
SITE REF. ADDRESS CAPACITY:
137A Britannia Road 33
137B Britannia Road 87
141 Tingley Common 36
1018A Topcliffe lane 231
3077A Rein Road 246
3077B Rein Road 124
1281B Bruntcliffe Road 234
1064B Bruntcliffe Road 11
3467 Bruntcliffe Road 16
The last three sites have had conditions placed on them by a government inspector that was hard fought for and we strongly feel that those should be included in the LDF.
Development of all of these sites which are close to the A650 would put a vast unexceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock,the problems we have on the A650 are well documentated. Schools are filling up at an alarming rate,health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. ,Morley has no need for anymore industrial estates, warehouses,offices etc.VVhile there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communties. Brownfield sites such asTingley Mills,land at the bottom of High Street,Bridge Street, Fountain Street and the many brownfield sites in Leeds,just to name a few should be developed first. It appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

- 3077B Rein Road 124
- 1281B Bruntcliffe Road 234
- 1064B Bruntcliffe Road 11
- 3467 Bruntcliffe Road 16

The last three sites have had conditions placed on them by a government inspector that was hard fought for and we strongly feel that,those should be included in the LDF.

Development of all of these sites which are close to the A650 would put a vast unexceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock,the problems we have on the A650 are well documentated. Schools are filling up at an alarming rate,health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. ,Morley has no need for anymore industrial estates, warehouses,offices etc.While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communties. Brownfield sites such asTingley Mills,land at the bottom of High Street, Bridge Street, Fountain Street and the many brownfield sites in Leeds,just to name a few should be developed first. It appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

Schools are filling up at an alarming rate,health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. ,Morley has no need for anymore industrial estates, warehouses,offices etc.While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communties. Brownfield sites such asTingley Mills,land at the bottom of High Street,Bridge Street, Fountain Street and the many brownfield sites in Leeds,just to name a few should be developed first. It appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

Representation ID: REP04504 Question Ref: H7

It seems a great deal of money and time has been spent on producing long documents for future development without giving any thought to how the infrastructure is going to cope which is already struggling.

I refer to these following residential sites and possible housing sites.

SITE REF. ADDRESS CAPACITY:

137A Britannia Road 33

137B Britannia Road 87

141 Tingley Common 36

1018A Topcliffe lane 231

3077A Rein Road 246

3077B Rein Road 124

1281B Bruntcliffe Road 234

1064B Bruntcliffe Road 11

3467 Bruntcliffe Road 16

The last three sites have had conditions placed on them by a government inspector that was hard fought for and we strongly feel that those should be included in the LDF.

Development of all of these sites which are close to the A650 would put a vast unexceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock,the problems we have on the A650 are well documentated. Schools are filling up at an alarming rate,health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. ,Morley has no need for anymore industrial estates, warehouses,offices etc.While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communties. 141 Tingley Common 36

1018A Topcliffe lane 231

3077A Rein Road 246

3077B Rein Road 124

1281B Bruntcliffe Road 234

1064B Bruntcliffe Road 11

3467 Bruntcliffe Road 16

The last three sites have had conditions placed on them by a government inspector that was hard fought for and we strongly feel that those should be included in the LDF.

Development of all of these sites which are close to the A650 would put a vast unexceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock,the problems we have on the A650 are well documentated. Schools are filling up at an alarming rate,health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. ,Morley has no need for anymore industrial estates, warehouses,offices etc.VVhile there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communties. Brownfield sites such asTingley Mills,land at the bottom of High Street,Bridge Street, Fountain Street and the many brownfield sites in Leeds,just to name a few should be developed first. It appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

The last three sites have had conditions placed on them by a government inspector that was hard fought for and we strongly feel that those should be included in the LDF.

Development of all of these sites which are close to the A650 would put a vast unexceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock,the problems we have on the A650 are well documentated. Schools are filling up at an alarming rate,health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. ,Morley has no need for anymore industrial estates, warehouses,offices etc.While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communties. Brownfield sites such asTingley Mills,land at the bottom of High Street, Bridge Street, Fountain Street and the many brownfield sites in Leeds,just to name a few should be developed first. It appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Red Sites within the Core Public Transport Network

Table 5 below contains sites that are classified as 'Sites not considered suitable for allocation for housing' that fall within 400m of the current core bus network. From a public transport perspective, these sites (in principle) would be acceptable for housing development. For the larger sites, site specific mitigation would be required but it is unlikely that substantial bus service provision would be required at these sites (based on the current public transport network).

Representation ID: REP04521 Question Ref: H7

It seems a great deal of money and time has been spent on producing long documents for future development without giving any thought to how the infrastructure is going to cope which is already struggling.

I refer to these following residential sites and possible housing sites.

SITE REF. ADDRESS CAPACITY:

137A Britannia Road 33

137B Britannia Road 87

141 Tingley Common 36

1018A Topcliffe lane 231

3077A Rein Road 246

3077B Rein Road 124

1281B Bruntcliffe Road 234

1064B Bruntcliffe Road 11

3467 Bruntcliffe Road 16

The last three sites have had conditions placed on them by a government inspector that was hard fought for and we strongly feel that those should be included in the LDF.

Development of all of these sites which are close to the A650 would put a vast unexceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock,the problems we have on the A650 are well documentated. Schools are filling up at an alarming rate,health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. ,Morley has no need for anymore industrial estates, warehouses,offices etc.While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communties. Brownfield sites such asTingley Mills,land at the bottom of High Street,Bridge Street, Fountain Street and the many brownfield sites in Leeds,just to name a few should be developed first. It appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

3077A Rein Road 246

3077B Rein Road 124

1281B Bruntcliffe Road 234

1064B Bruntcliffe Road 11

3467 Bruntcliffe Road 16

The last three sites have had conditions placed on them by a government inspector that was hard fought for and we strongly feel that those should be included in the LDF.

Development of all of these sites which are close to the A650 would put a vast unexceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock,the problems we have on the A650 are well documentated. Schools are filling up at an alarming rate,health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. ,Morley has no need for anymore industrial estates, warehouses,offices etc.While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communties. Brownfield sites such asTingley Mills,land at the bottom of High Street,Bridge Street, Fountain Street and the many brownfield sites in Leeds,just to name a few should be developed first. It appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

Development of all of these sites which are close to the A650 would put a vast unexceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock,the problems we have on the A650 are well documentated. Schools are filling up at an alarming rate,health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. ,Morley has no need for anymore industrial estates, warehouses,offices etc.VVhile there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communties. Brownfield sites such asTingley Mills,land at the bottom of High Street,Bridge Street, Fountain Street and the many brownfield sites in Leeds,just to name a few should be developed first. It appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

Representation ID: REP04557 Question Ref: H7

It seems a great deal of money and time has been spent on producing long documents for future development without giving any thought to how the infrastructure is going to cope which is already struggling.

I refer to these following residential sites and possible housing sites.

SITE REF. ADDRESS CAPACITY:

137A Britannia Road 33

137B Britannia Road 87

141 Tingley Common 36

1018A Topcliffe lane 231

3077A Rein Road 246

3077B Rein Road 124

1281B Bruntcliffe Road 234

1064B Bruntcliffe Road 11

3467 Bruntcliffe Road 16

The last three sites have had conditions placed on them by a government inspector that was hard fought for and we strongly feel that those should be included in the LDF.

Development of all of these sites which are close to the A650 would put a vast unexceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock,the problems we have on the A650 are well documentated. Schools are filling up at an alarming rate,health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. ,Morley has no need for anymore industrial estates, warehouses,offices etc.VVhile there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communties. Representation ID: REP04613 Question Ref: H7

It seems a great deal of money and time has been spent on producing long documents for future development without giving any thought to how the infrastructure is going to cope which is already struggling.

I refer to these following residential sites and possible housing sites.

SITE REF. ADDRESS CAPACITY:

137A Britannia Road 33

137B Britannia Road 87

141 Tingley Common 36

1018A Topcliffe lane 231

3077A Rein Road 246

3077B Rein Road 124

1281B Bruntcliffe Road 234

1064B Bruntcliffe Road 11

3467 Bruntcliffe Road 16

The last three sites have had conditions placed on them by a government inspector that was hard fought for and we strongly feel that those should be included in the LDF.

Development of all of these sites which are close to the A650 would put a vast unexceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock,the problems we have on the A650 are well documentated. Schools are filling up at an alarming rate,health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. ,Morley has no need for anymore industrial estates, warehouses,offices etc.VVhile there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communties. Brownfield sites such asTingley Mills,land at the bottom of High Street,Bridge Street, Fountain Street and the many brownfield sites in Leeds,just to name a few should be developed first. It appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

The last three sites have had conditions placed on them by a government inspector that was hard fought for and we strongly feel that those should be included in the LDF.

Development of all of these sites which are close to the A650 would put a vast unexceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock,the problems we have on the A650 are well documentated. Schools are filling up at an alarming rate,health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. ,Morley has no need for anymore industrial estates, warehouses,offices etc.VVhile there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communties. Brownfield sites such asTingley Mills,land at the bottom of High Street,Bridge Street, Fountain Street and the many brownfield sites in Leeds,just to name a few should be developed first. It appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Red Sites within the Core Public Transport Network

Table 5 below contains sites that are classified as 'Sites not considered suitable for allocation for housing' that fall within 400m of the current core bus network. From a public transport perspective, these sites (in principle) would be acceptable for housing development. For the larger sites, site specific mitigation would be required but it is unlikely that substantial bus service provision would be required at these sites (based on the current public transport network).

This site appears likely to be accessed of West Lea Drive at the south (presumably that is why the site boundary departs from field boundaries at this point) and also via the farm yard adjacent to no 8A Skye Road. The majority of the traffic will thus use Skye Road, which is already congested in the morning peak at the Dewsbury road traffic lights. Presumably this is why Highways are now doing a traffic count.

3078A

We object to the rating of site reference 3078A as Amber (sites which have potential but issues or not as favoured as green sites). We believe this site should be allocated as Green (sites which have the greatest potential to be allocated for housing) in the Site Allocations Plan.

[See full representation for plans, maps etc which includes promotional document]

The site comprises of predominantly greenfield land on the south western edge of the village of Tingley. To the north eastern corner of the site is a small agricultural holding making it a partly brownfield site. The site is sloping with dense tree coverage on the western side and in that respect has a sense of enclosure. The site is bounded to the north by St Marys Close, east by Skye Road and to the south by open land. The surrounding land uses are residential to the north and east and agricultural to the south. It is currently designated as Green Belt and as an Urban Fringe Priority Area in the Leeds UDPR 2006.

The site is on the edge of the village of Tingley. In terms of local services, the site is approximately 200m away from a One Stop Local (which includes a Post Office), 250m from another small shop and 1.2km away from a Newsagents, Mini-Mart and Takeaway. Further shops and services can be found in Morley, approximately 3km away. Amenities include a Morrisons supermarket, banks, shops, cafes and pubs. Local community facilities include a library, town hall and leisure centre with a gym and swimming pool.

The site has good access to public transport, education and health facilities. There are a number of bus stops are located within 400m from the site on Syke Road and Dewsbury Road. The following services can be accessed.

- 202 / 203 – Leeds Bus Station to Huddersfield Bus Station via White Rose Centre and Dewsbury (every 15 minutes)
- 425 – Wakefield Bus Station to Bradford Interchange (every hour)
- 205 – Pudsey Bus Station to Dewsbury Bus Station (every hour)
- 153 – Morley and Castleford (every 2 hours)

The nearest railway station to the site is 3.1km away in Morley, where there are regular services to Leeds, Huddersfield and Manchester Victoria.

The nearest primary school is Westerton Primary School, 450m away from the site followed by Hill Top Primary School, 1.7km away. The nearest secondary school is Woodkirk Academy, 800m from the site.

With regard to health facilities, the closest doctors surgery is Leigh View Medical Practice located in Tingley 1.9km away from the site. This surgery also has an on-site pharmacy.

Other doctors surgeries are located in Middleton and Morley. The closest dentists is Issacs, Robson and Associates which is located 2.5km away on the A650. Further dentists can be found in Middleton and Morley.

[Representation sets out Core Strategy policies].

The allocation of this site for housing development is consistent with the adopted National Planning Policy Framework. [Representation sets out NPPF policy]. The development of the site is consistent with these objectives.

The National Planning Policy Framework states at paragraph 80 that the Green Belt serves five purposes. The table below assesses this site in relation to these purposes:

To check the unrestricted sprawl of large built-up areas - This site is well connected to the built up area and has three boundaries with the existing built

up area. Development of this site would not result in ribbon development of isolated development. Development of this site would round off the western edge of Tingley.

To prevent neighbouring towns merging into one another - Development of this site would not lead to neighbouring towns merging into one another as the site is bounded to the north and east by residential development and to the east by Dewsbury Road.

To assist in safeguarding the countryside from encroachment - The site does not perform an important role in safeguarding the countryside from encroachment.

To preserve the setting and special character of historic towns - The site is not within or adjacent to a conservation area, listed building or other historical feature. Development of this site would have no effect on the setting and special character or historic features.

To assist in urban regeneration, by encouraging the recycling of derelict and other urban land - Spatial Policy 1 of the Core Strategy advises that an appropriate balance of greenfield and brownfield land will be necessary to deliver the spatial development strategy. There are a few derelict and brownfield sites within the Outer South West housing market area; therefore the development of greenfield sites will be necessary in order to meet the housing requirement in the draft Core Strategy.

Core Strategy Spatial Policy 6 The Housing Requirement and Allocation of Housing Land

sets out that the allocation of housing land is based on criteria such as sustainable locations which meet the standards of public transport accessibility, the least impact on green belt purposes and avoiding areas of flood risk. The development of this site accords with this draft policy.

LCC have identified the reasons this site was rated as Amber in their site review. They stated that the site meets Core Strategy standards with the exception of health and local services. In regard to health services, the LCC accessibility standard states that sites should be within a 20 min walk. The closest doctors surgery is Leigh View Medical Practice located in Tingley and is beyond the desired limit, the 153 bus runs from outside the site on Syke Road to a stop on Westerton Road, approximately 300m from the surgery. The LCC accessibility standard for local services states that sites should be within a 15

Site Comments - Outer South West

Site reference: 3078A

Housing

Hey Beck Lane, Wakefield

Name: Barratt & David Wilson Homes Yorkshire West

Representor No: PRS05643

minute walk. We have found two local convenience stores, approximately 250m away from the site and consider the LCC scoring to be inaccurate.

Conclusions

The site does not contribute to the purposes of Green Belt. It is well related to the existing settlement and would round off the edge of Tingley. This site offers a logical and sustainable extension to the current urban form and removal from Green Belt. It is a mixed greenfield/brownfield site. The site is close to a Strategic Location for Jobs Growth as identifies in the draft Core Strategy, which is approximately 1.2km away at Junction 28 of the M62. This strategic area for jobs growth needs to be matched with new housing in easily accessible locations. The Syke Road site can already access Junction 28 of the M62 easily via regular bus services, therefore this site provides an ideal location for housing growth. The Outer South West has a housing requirement of 7,200 dwellings, a significant proportion, therefore this site could contribute to this growth. To meet this housing requirement the Site Allocations Plan Issues and Options Document identifies 1,398 dwellings from outstanding planning permissions and UDP housing allocations, and 4,214 dwellings from sites assessed as 'green'. Combined this totals 5,612 and is insufficient to meet the draft housing requirement, therefore a number of sites assessed as 'amber' will be necessary to allocate to meet the identified need for this market area. Deliverable sites such as Dewsbury Road/Syke Road, Tingley should therefore be allocated.

There are no significant environmental or physical constraints which would preclude development on this site. There would be a number of benefits including:

- Delivery of new family housing including open market homes and affordable housing
- Direct and indirect construction jobs
- Section 106 monies in respect of transport, education and public open space
- Increased expenditure in the local economy
- New Homes Bonus
- Provision of new public open space

The site is deliverable when considered against the definition of deliverable in the Framework (footnote 11 of paragraph 47). The site is available now given the agreement in place between the landowners and a national housebuilder. The site is in a sustainable location, suitable for the delivery of housing as detailed in this response. There are no insurmountable physical problems of limitations and as such the site is considered to be suitable for housing. It is considered that this is an achievable site, which has a realistic prospect of being delivered within 5 years; there are no known viability issues restricting the site from coming forward.

Name: Neil Dawson

Suggested sites from Amber to Red;

309
1067B
1069
1143F
1220A
1274
1275A
1279
1332
2105
2155
3000
3064
3078A
4004

These sites are almost all located within the existing Green Belt and expansion into the Green Belt would lead to increased urban sprawl between the various townships in the Outer South West, and lead to coalescence between communities

Development of the Green Belt sites would also reduce the open green area and provide encroachment into the countryside around Morley and other smaller townships.

In addition there is insufficient road capacity and little scope for expansion for other necessary services. There would be a requirement for new or upgrading of existing roads which would therefore favour development on sites that are already located within the Morley or the Leeds Urban areas rather than eroding the Green Belt further.

Site 3078A is close to potential development in Kirklees and could lead to the complete erosion of the Green Belt and open green space between Leeds and Kirklees.

Any further development at sites 1275A and 1279 would reduce the Green Belt between the existing residential boundary and the A653 Dewsbury Road to a narrow strip which would put pressure in future years to extend residential use further east.

See rep for full details.

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Amber Sites outside the Core Public Transport Network

Table 2 below contains sites that are classified as 'Sites which have potential but issues or not as favoured as green sites' but fall outside 400m of the current core bus network. Consideration needs to be given to if this site would be able to meet the LDF public transport accessibility requirements should housing be brought forward. We are be minded to recommend that these site were not prioritised for housing until other more accessible site have been considered. Sites which fall marginally outside the 400m catchments and have high bus frequencies or are small low capacity sites are less of concern but are flagged up nonetheless.

Red Sites within the Core Public Transport Network

Table 5 below contains sites that are classified as 'Sites not considered suitable for allocation for housing' that fall within 400m of the current core bus network. From a public transport perspective, these sites (in principle) would be acceptable for housing development. For the larger sites, site specific mitigation would be required but it is unlikely that substantial bus service provision would be required at these sites (based on the current public transport network).

Representor No: PRS06750

Representation ID: REP07983 Question Ref: H1

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Green and Amber Sites within the Core Public Transport Network

Table 4 below contains sites that are classified as 'Sites which have potential to be allocated for housing' and 'Sites which have potential but issues or not as favoured as green sites' that fall within 400m of the current core bus network.

The sites in this list are supported for housing growth.

Site specific mitigation would be required but it is unlikely that substantial bus service provision would be required at these sites (based on the current public transport network)

From a public transport perspective, we would encourage the prioritisation of these sites based on the proximity to the core public transport network and the bus service frequency levels.

Housing

Land at off Gascoigne Road

Name: Adrian Sail

Representor No: PRS04944

Representation ID: REP01165 Question Ref: H3

SHLAA ref 3311- Gascoigne Road, Thorpe, WakefieldThe site adjoins the eastern boundary of Thorpe and could form a potential extension with Gascoigne Road forming a natural boundary for the settlement. The location of the site between the two sections of Thorpe would link it together to form a more complete urban form in view of its situation adjoining the road bridge across the M62. The settlement of Thorpe has good community services considering its size which include a primary school, a convenience store, pharmacy, hair salon and sports pitches. There is also a bus service running along Gascoigne Road towards the Leeds and Wakefield every hour. Pedestrian and cycle links are also in place between the southern section of Thorpe and the northern section via a foot bridge across the M62 motorway. Road access is adequate with a road linking Thorpe across the M62 and further roads running south linking it with the larger settlements of West and East Ardsley. The development of this site would add to the current infrastructure reducing the settlements reliance on the surrounding villages and facility a more sustainable community. The site currently lies within the Green Belt, however a number of similar Green Belt sites in the locality are categorised as "sites which have greatest potential to be allocated for housing". It is not clear why these sites are preferred to 3311. The site is low value agricultural land and has poor visual amenity caused by its position in the wedge of land between two intersecting motorways and a major railway line. Furthermore the visual value of the land is insignificant in its context as the site lies in a basin which obscures views into the site from the north and south. The site is suitable for development now or for the future expansion of Thorpe which could be put in place by its removal from the Green Belt in this current review of development plans.

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Red Sites outside the Core Public Transport Network

Table 3 below contains sites that are classified as 'Sites not considered suitable for allocation for housing' and fall outside 400m of the current core bus network. Consideration needs to be given to if this site would be able to meet the LDF public transport accessibility requirements should housing be brought forward. We agree that these sites would not be suitable for housing development.

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Green and Amber Sites within the Core Public Transport Network

Table 4 below contains sites that are classified as 'Sites which have potential to be allocated for housing' and 'Sites which have potential but issues or not as favoured as green sites' that fall within 400m of the current core bus network.

The sites in this list are supported for housing growth.

Site specific mitigation would be required but it is unlikely that substantial bus service provision would be required at these sites (based on the current public transport network)

From a public transport perspective, we would encourage the prioritisation of these sites based on the proximity to the core public transport network and the bus service frequency levels.

Sites 1258 and 3365

117 houses on two greenfield sites creating a continuous built up area along Westerton Road. Again a degradation of the living environment for present residents. Traffic problems would be made worse as Westerton Road narrows considerably near these sites before the traffic lights onto A650.

Name: Michael Stilwell

Representor No: PRS01133

Representation ID: REP03207 Question Ref: H1

3365

Lack of amenities – the amenities in the area cannot support the existing population of West Ardsley, never mind accepting an influx of possibly 5000 more.

- Virtually all the shops have closed over the years, there are now only 3 grocery shops in the area. Anyone living at the southern end of Haigh Moor Road has over 1 mile to travel to the nearest shop.
- The schools are overcrowded, Westerton Road has had more external classrooms added, so it cannot be extended. Hill Top School is nearly full now from the existing population growth, again it is extremely limited in expansion possibilities.
- Bus services are pathetic, services to Leeds, Dewsbury and Wakefield are hourly at best. Batley is only accessible from Wakefield – Batley Road. There are areas where buses have been removed completely. This week another service has been stopped.
- There are not any play areas for children, your own survey records this failing.
- There is only one medical centre with 8 doctors giving cover to some existing 15000 patients. To get an appointment with a specific GP can take 3 weeks, the centre has recently been extended to its limits so there is nowhere to go. Also there is only one pharmacist.

Traffic

All the roads in the area are in a bad state of repair, I have lived here for 28 years and Haigh Moor Road has never been resurfaced despite 3 new housing estates accessing it. In June 1992 the planning inspector denied a planning application (91/23/00350) for an annex for an invalid because although neither he nor his brother drove. The reason for this was "I am concerned that were an additional dwelling to be provided there would be no guarantee that it would not lead to additional traffic generation at some future time, perhaps through changed circumstances, with consequent adverse impact on highway safety." Yet here we are with a further 70 houses at Foxfields and Jude's Pond and a proposed 179 on these new sites, probably adding in excess of 500 vehicles to Haigh Moor Road.

There has been a water leak on HMR which despite being reported to Yorkshire Water is still flowing after 3 months and has now become 2 leaks. The western end of Westerton Road is in a dangerous state with potholes and speed restriction bumps. LCC appears to be unable to keep up with the maintenance of its roads in South Leeds.

LCC's attitude to this area seems to be that Ardsley is an outpost on the borders with Wakefield and Kirklees and beyond the borough or Morley, so we can be conveniently ignored. Ardsley is quite definitely being asked to provide the lion's share of new housing without any benefit, it has poor services and has become a dormitory area of Leeds.

1336 /1258 / 1032 / 3365 / 1143B / 1143D I am making my response by letter; the online boxes rejected my comments because they exceed 3,000 digits.

3373A Haigh Wood, West Ardsley, 3373C Haigh Wood, West Ardsley,
1336 Westerton Road, West Ardsley, 3456A Ardsley Reservoir,
1258 Westerton Road, Tingley, 3365 Westerton Road, Tingley,
1032 Bradford Road, 1143B & 1143D Thorpe Lane, Tingley.

Objections.
The Core Strategy seeks to be "fair". The word is used in paragraph 1.2 and again in 1.14. Yet the proposed green housing sites when taken together would definitely not be fair to West Ardsley and Tingley. No justification has been given as to why there is such a concentration here, nor any evidence of local need. Indeed, paragraph 4.6.14 states that "The SHMA 2011 was not able to identify any geographically specific need for new housing based on population growth." The 13 green housing sites in Ardsley and Tingley seem to have been assessed individually rather than their cumulative impact. This impact is potentially very much greater when considered alongside Kirklees Council's proposals for the Chidswell area, and comes on top of the huge impact on West Ardsley of major housing development in the 1990s - the estates now accessed by Lowry Road and Constable Road. The newly proposed sites taken together would consolidate semi-rural groups of settlements into a predominantly urban residential area. Most of the open frontages to Bradford Road and Westerton Road would be built on, removing open aspects and distant views and tending towards the creation of amorphous sprawl of development across the area along the length of the A650.

3365 – As this is green belt land it should be protected. It is currently used for growing crops, so if built on valuable food production would be lost.

Representation ID: REP04315 Question Ref: H2

3365 – As this is a green belt site it shouldn't be built on. It is currently used for growing crops. There are already two new developments been built on Westerton Road and a further 83 houses will create a lot of traffic onto Westerton Road and surrounding roads which are already very busy.

1079, 1072, 1077, 1143B, 1143D, 1171B, 1200A, 1258, 1284a, 1285, 1344, 2098a, 3365, 3456A.2098C, 2105, 2155, 3000, 3056.3064, 3078A, 4004, and 4029. As previously stated the amber sites that are greenbelt land should not be considered for development. Site 1032 is designated as a protected area of search this land has been retained along the edge of the existing settlement pending more suitable sites being found in the longer term this site should only be developed as a last resort.

Representation ID: REP01024 Question Ref: H2

1079, 1072, 1077, 1143B, 1143D, 1171B, 1200A, 1258, 1284a, 1285, 1344, 2098a, 3365, 3456A. All these sites are green belt sites , green belt land is there to stop urban sprawl and the destruction of the countryside that still remains in this area. If sites 1143B, 1143D, 1143F,2155, 1274, 1032, and 2128 are built on East Ardsley West Ardsley and Tingley will just become one built up area hemmed in by the M62. Not all of these are greenbelt sites but if the development is allowed the basic principal of having greenbelt in this area will be completely wrecked!

Representation ID: REP00848 Question Ref: General comment

Site 3373C Objections1. Local character and identityDevelopment of this site would be contrary to the following sections of the Council's policy SP1 in the Core Strategy:1. SP1 (i) states: "Smaller Settlements will contribute to development needs, with the scale of growth having regard to the settlement's size, function and sustainability." Site 3373A, with its estimated capacity of 130 dwellings, does not have regard to the size, function and sustainability of West Ardsley.SP1 (iii) states: "For development to respect and enhance the local character and identity of places and neighbourhoods". The local character and identity of West Ardsley would be seriously threatened by 3373a, 3373C and 1336, and would make its component areas of Upper Green, Haigh Moor and Hill Top barely distinguishable from each other.My view accords with three decision letters from the Planning Inspectorate which were used in the Council's own evidence to the Unitary Development Plan public inquiry in 1995. In paragraph 39 of his report on the Morley Local Plan, the inspector considered that the planned development at Haigh Wood (site WA2H) would have a "very serious impact upon the character and environment of West Ardsley". He concluded in paragraph 10: "In the past, development in the Morley area would appear to have been sporadic and opportunist, placing the identity of the smaller settlements at risk and tending towards the creation of amorphous sprawl of development across the area along the length of the A650 Bradford to Wakefield road. In my view, the further diffusion of the existing loosely-knit settlement pattern should, as far as possible, be resisted."Considering appeals in 1986 on 81/23/00212 and 81/23/00213 (broadly the same area as LDF sites 3373A/B/C and 1336) the inspector said "It would virtually eliminate the open centre and consolidate the semi-rural group of settlements into a predominantly urban residential area". This was endorsed in the Secretary of State's decision letter.In 1994, a third inspector dismissed an appeal to develop land at Arthington Close near the edge of Haigh Wood because it would "unacceptably erode the fringe of this rural area and would lead to pressure for further encroachment of residential development, most particularly in the fields to the west..."Although some years have passed since these decisions, the character and environment of the area are still semi-rural and just as delicate. When cogent arguments have been repeatedly made against development of the 3373 areas by the Secretary of State, by three planning inspectors and by Leeds Council itself (in evidence to the UDP inquiry), there can be no justification for sites 3373A, 3373C and 1336 being pursued for residential development in the LDF. They should instead be reclassified as "red" and withdrawn from consideration for development when producing the next stage of the plan.2. Damage to Haigh Wood and Baghill beck valleyDevelopment of this site would be contrary to the Council's policy P12 in the Core Strategy:"The character, quality and biodiversity of Leeds' townscapes and landscapes, including their historical and cultural significance, will be conserved and enhanced to protect their distinctiveness through stewardship and the planning process." The secluded Haigh Wood valley comprises the central portion of site 3373A, including part of the wood covered by a Tree Preservation Order. Residential development would prejudice the objectives underlining this policy as set out in paragraphs 5.3.46 to 5.3.48 of the Core Strategy including: "The Council seeks to protect and enhance the varied landscapes of Leeds and the assets they contain, from valued local trees, the countryside to nationally designated landscape, fauna and flora". This view was endorsed by three planning inspectors and again in the Council's evidence, given by Mr G B Andrews, at the UDP inquiry. In his paragraph 4.3.6, Mr Andrews stated: I refer to the conclusions reached by the inspectors at the two subsequent appeal cases in 1985 and 1994. In each case it is acknowledged that the Haigh Wood area is of value as an area of attractive open farmland with a rural character and provides an important amenity in the local area". Even the Council's own assessment for the LDF states that the site is: "Not supported (RED). This site includes Haigh Wood and Baghill Beck Local Nature Area which fall under UK Biological Action Plan priority habitats - a mixture of woodland, scrub and grassland habitats alongside Baghill Beck. There are a number of wide hedgerow/woodland belts throughout the site that provide a valuable habitat. Water vole has been recorded on the Hey Beck. The Baghill Beck flows into this water course and could support this species. Bats to consider."3. FairnessThe Core Strategy seeks to be "fair". The word is used in paragraph 1.2 and again in 1.14. Yet the proposed green housing sites when taken together would definitely not be fair to West Ardsley and Tingley. No justification has been given as to why there is such a concentration here, nor any evidence of local need. Indeed, paragraph 4.6.14 states that "The SHMA 2011 was not able to identify any geographically specific need for new housing based on population growth." The sites seem to have been assessed individually rather than their cumulative impact. This impact is potentially very much greater when considered alongside Kirklees Council's proposals for the Chidswell area. 4. Highway access The Upper Green culs-de-sac and Hill Top Lane cul-de-sacs are not suitable to serve more houses. They would become much less safe for children to play in and the already severe dangers at school times would be exacerbated.5. SchoolsPrimary and secondary schools already full and difficult to expand further.6. Agricultural landGood quality agricultural land would be lost.7. ViabilityExtra costs from: a. parts of 3373A and 3373C have serious levels problems and look undevelopable; b. bell pits known to exist in the area from former mining; c. elimination of Japanese Knotweed.The site on Westerton Road from Regency Gardens to Westerton Wood if developed will see 117 new homes - this land is currently classed as green belt (site 3365 = 83 homes and site 1258 = 34 homes) development here will represent a major incursion into the Green belt and will create further pressure on Ardsley reservoir as a local beauty spot. Development of sites 3365 and 1258 will result in the loss of valuable agricultural land, there are a number of wide hedgerow and woodland belts throughout the site that provide a valuable habitat for wildlife in particular bats. Development of the sites on Westerton Road will result in the amorphous sprawl of development across the area along the whole length of the Westerton Road.Site 1330B is an extension of the building that is currently ongoing adjacent to Jude's pond - and is for a further 32 houses ! This site has major highways access issues and has less than the recommended visibility splay for highways safety - further development of this site will exasperate current problems regarding drainage on the land - Haigh Moor Road residents already have to deal with flooding of the pavements and highways in the vicinity of Jude's pond. 464 houses in such a small vicinity is unsustainable, there are currently just over 300 pupils at Hill Top Primary School with no room for any expansion, the school is full and the same is true of Westerton which as you know was a small village school 20 years ago but is now one of the biggest primary schools in the Leeds district and all because of the amount of building that has taken place over recent years.Leeds City Council have in their allocation plan confirmed that Ardsley and Robin Hood have a deficiency in parks and gardens (the only area in Leeds South West to be deficient) - our children already have very little designated play areas, they have also confirmed that we are deficient in outdoor sports areas and facilities for children to play. We have however got a surplus of natural green space which is currently under threat of housing - if this natural greenspace is to be used for any purpose, surely it should be used to reduce the deficit and improve our community. Further reduction of amenity greenspace in an area which is seeing more and more housing development is unfair and unsustainable.Our GP surgeries are at breaking point with current waiting times for appointments being in excess of two weeks, the surgery at Leigh View was recently extended and it's difficult to envisage how this could be extended further to serve the population boom that will ensue if all these sites are developed.Further erosion of the demarcation between West Ardsley & Tingley - soon the two settlements will merge into one and West Ardsley as a separate community will be subsumed into its near neighbour, the two areas will be barely distinguishable from each other which is contrary to the Councils policy SP1 which clearly states smaller Settlements will contribute to development needs, with the scale of growth having regard to the settlement's size, function and sustainability. If these plans were approved it will no doubt result in urban sprawl with no identifiable boundaries.Our fields provide a public amenity for dog-walkers, cyclists, ramblers and local residents alike and it would virtually eliminate the open centre and consolidate the semi-rural group of settlements into a predominantly urban residential area". This view was endorsed by the Secretary of State in their past decision letter.Our road network was not built to support the existing volume of traffic , we do not have the infrastructure to support development of this scale, our public transport links are very poor with only one bus an hour into Leeds, the only viable means of transportation is by car which will have a cumulative impact on the A650 and A653 which are already congested.

Sites 1258 + 3365. The close proximity to Westerton woods which is protected and the reservoir plus the damage to wildlife in the area. There are already a large number of new builds in the area ie Common Lane, Thorp and East Ardsley many of which remain unsold. Pressures on schools and medical facilities, an increase in what is already heavy traffic area. Schools in the area are already over subscribed with no plans for expansion. New developments would not enhance or improve any part of the area only place more stress on existing infrastructure.

sites 3365,1258 & 3373c Sites 3365 & 1258 are on green belt land & will also spoil Ardsley reservoir which is a local beauty spot used by many local people myself included as I walk round it almost every day. It is also used by lots of other people for leisure activities such as walking clubs. It will also result in a loss of agricultural land & valuable hedgerows. Site 3373c Has insufficient highways infrastructure for yet another 144 houses & would mean that Tingley & West Ardsley could no longer remain as separate villages & the communities would lose one of its last valuable open sites for outdoor enjoyment.

Representor No: PRS04212

Representation ID: REP00768 Question Ref: H14

Perhaps some of the smaller sites could be used for his purpose, e.g 1258, 3365. This type of housing would perhaps not lead to a dramatic increase in traffic as some other schemes would, but again consideration would need to be given to provision of care services in the area, as elderly people may place more demands on these.

Representation ID: REP05689 Question Ref: H1

Please note my objections to the proposed developments below.
The proposal for site 3373A (This is the site that runs from the top of Baghill around the back of Arthington Close and Upper Green and will finish on Westerton Road opposite Lonsdale Rise) is to build 130 houses. Lee gap Fair is held twice a year in these fields, the fair is the oldest horse fair in England dating back to 1136 and forms part of the history and heritage of the area.
The 3373C site which will run from the top of Hilltop Lane and carve up all the fields from there to Nook Green on Haigh Moor Road is for 144 houses. It can be argued that the highways infrastructure for Site 3373B is inadequate, there are Highways concerns re poor accessibility for the number of houses proposed and then there is the issue of Highways safety with the junction of Hilltop Lane being within 100 metres of the primary school. All the issues on the attached letter are also relevant for site 3773C.
The site on Westerton Road from Regency Gardens to Westerton Wood if developed will see 117 new homes - this land is currently classed as green belt (site 3365 = 83 homes and site 1258 = 34 homes) development here will represent a major incursion into the Green belt and will create further pressure on Ardsley reservoir as a local beauty spot.
Development of sites 3365 and 1258 will result in the loss of valuable agricultural land, there are a number of wide hedgerow and woodland belts throughout the site that provide a valuable habitat for wildlife in particular bats.
Development of the sites on Westerton Road will result in the amorphous sprawl of development across the area along the whole length of the Westerton Road.
Site 1330B is an extension of the building that is currently ongoing adjacent to Jude's pond - and is for a further 32 houses ! This site has major highways access issues and has less than the recommended visibility splay for highways safety - further development of this site will exasperate current problems regarding drainage on the land - Haigh Moor Road residents already have to deal with flooding of the pavements and highways in the vicinity of Jude's pond.
Please note that all these sites are in addition to any planning applications that have already been approved.
464 houses in such a small vicinity is unsustainable, there are currently just over 300 pupils at Hill Top Primary School with no room for any expansion, the school is full and the same is true of Westerton which as you know was a small village school 20 years ago but is now one of the biggest primary schools in the Leeds district and all because of the amount of building that has taken place over recent years.

Hi,

I would like to object against the planning proposals for the following sites on Map 33 (off Westerton Road)

1336

3373B

3373A

1330B

33732

3365

3373C

3456A

3456B

1258

I suggest that these should all be changed to RED due to the following reasons:

Too much traffic already so roads will be extremely busy right outside my front door. I have young children and will be scared for their safety.

Services such as Doctors surgery's, dentists, local hospitals, schools, supermarkets already too busy so won't be able to cope

Less water will be absorbed into the ground resulting in more flooding in our gardens.

This is currently already happening in several houses on Westerton Road including mine.

There are bats, foxes, owls, frogs, newts and many birds living in the area especially on sites 1336, 3373A, 3373B, 3373C. Should these not be protected?

House prices for homeowners in the area already will decrease.

We moved to the area because of the greenery and our view will be spoilt.

The sewerage system in place on Westerton Road recently failed causing waste from the sewers to overflow into nearby houses. This was due to the recent housing developments that have recently been built nearby so the sewerage system was unable to cope. This could very likely happen again.

Representation ID: REP05702 Question Ref: General comment

Firstly I would like to express my disappointment and embarrassment towards the councils plans for the proposed plans listed below. I understand the reason behind the lack of communication with the residents in the area may be beneficial to the local council and certain government groups. It obviously cuts down on man hours and paperwork.

I would like to object against the planning proposals for the following sites on Map 33 (off Westerton Road)

1336

3373B

3373A

1330B

33732

3365

3373C

3456A

3456B

1258

The infrastructure in this area will struggle to cope with the demands of the services required.

The area is attracting wildlife not seen in built up areas. It seems a shame to disregard the wildlife issue I'm sure if a full environmental survey of the area was to be carried out this would scupper the planning permission. But again that would be an extra cost to the council which would have an impact at year end when the books are balanced.

Representation ID: REP05759 Question Ref: H1

I wish to object to 3373A, 3373B & 3373C.

[x]

I wish to object on the following grounds:

. The Haigh Wood site reference is 3373, and it is split into 3 parts:

. 3373A is land between Westerton Road & Haigh Wood. This has been assessed as suitable for residential development, with a capacity of 130 houses.

. 3373B is Haigh Wood itself. This has been assessed as unsuitable for residential development because of the topography of the site and access

. 3373C is the fields between Haigh Wood & Woollin Crescent, linking right round to Nook Farm.

The proposal for site 3373A (This is the site that runs from the top of Baghill around the back of Arthington Close and Upper Green and will finish on Westerton Road opposite Lonsdale Rise) is to build 130 houses. Lee gap Fair is held twice a year in these fields, the fair is the oldest horse fair in England dating back to 1136 and forms part of the history and heritage of the area.

The 3373C site which will run from the top of Hilltop Lane and carve up all the fields from there to Nook Green on Haigh Moor Road is for 144 houses. It can be argued that the highways infrastructure for Site 3373B is inadequate, there are Highways concerns re poor accessibility for the number of houses proposed and then there is the issue of Highways safety with the junction of Hilltop Lane being within 100 metres of the primary school. All the issues on the attached letter are also relevant for site 3373C.

The site on Westerton Road from Regency Gardens to Westerton Wood if developed will see 117 new homes - this land is currently classed as green belt (site 3365 = 83 homes and site 1258 = 34 homes) development here will represent a major incursion into the Green belt and will create further pressure on Ardsley reservoir as a local beauty spot. Development of sites 3365 and 1258 will result in the loss of valuable agricultural land, there are a number of wide hedgerow and woodland belts throughout the site that provide a valuable habitat for wildlife in particular bats. Development of the sites on Westerton Road will result in the amorphous sprawl of development across the area along the whole length of the Westerton Road. Site 1330B is an extension of the building that is currently ongoing adjacent to Jude's pond - and is for a further 32 houses ! This site has major highways access issues and has less than the recommended visibility splay for highways safety - further development of this site will exasperate current problems regarding drainage on the land - Haigh Moor Road residents already have to deal with flooding of the pavements and highways in the vicinity of Jude's pond.

Please note that all these sites are in addition to any planning applications that have already been approved.

464 houses in such a small vicinity is unsustainable, there are currently just over 300 pupils at Hill Top Primary School with no room for any expansion, the school is full and the same is true of Westerton which as you know was a small village school 20 years ago but is now one of the biggest primary schools in the Leeds district and all because of the amount of building that has taken place over recent years.

Leeds City Council have in their allocation plan confirmed that Ardsley and Robin Hood have a deficiency in parks and gardens (the only area in Leeds South West to be deficient) - our children already have very little designated play areas, they have also confirmed that we are deficient in outdoor sports areas and facilities for children to play. We have however got a surplus of natural green space which is currently under threat of housing - if this natural greenspace is to be used for any purpose, surely it should be used to reduce the deficit and improve our community. Further reduction of amenity greenspace in an area which is seeing more and more housing development is unfair and unsustainable.

Our GP surgeries are at breaking point with current waiting times for appointments being in excess of two weeks, the surgery at Leigh View was recently extended and it's difficult to envisage how this could be extended further to serve the population boom that will ensue if all these sites are developed.

Further erosion of the demarcation between West Ardsley & Tingley - soon the two settlements will merge into one and West Ardsley as a separate community will be subsumed into its near neighbour, the two areas will be barely distinguishable from each other which is contrary to the Councils policy SP1 which clearly states smaller Settlements will contribute to development needs, with the scale of growth having regard to the settlement's size, function and sustainability. If these plans were approved it will no doubt

result in urban sprawl with no identifiable boundaries.
Our fields provide a public amenity for dog-walkers, cyclists, ramblers and local residents alike and It would virtually eliminate the open centre and consolidate the semi-rural group of settlements into a predominantly urban residential area". This view was endorsed by the Secretary of State in their past decision letter.
Our road network was not built to support the existing volume of traffic , we do not have the infrastructure to support development of this scale, our public transport links are very poor with only one bus an hour into Leeds, the only viable means of transportation is by car which will have a cumulative impact on the A650 and A653 which are already congested
I trust that this is in order.
Regards
[x]

Representation ID: REP07126 Question Ref: H1

3365 Westerton Road, Tingley – this site is too large and sprawling. A smaller scale proposal might have been supportable here. The site proposed eats too far in to the Green Belt and would alongside the adjoining site be unsustainable in this location because of pressure on existing amenities (schools and GPs especially.)

Name: Redrow Homes

Representor No: PRS05770

Representation ID: REP06451 Question Ref: H1

Site 3365

We support the rating of site reference 3365, Westerton Road, Tingley as Green (sites which have the greatest potential to be allocated for housing). We believe that this site should be allocated for housing in the Site Allocations Plan.

See attached promotional brochure.

See also representation submitted for full details.

Name: The Sir Robert Ogden Partnership Ltd

Representor No: PRS05834

Representation ID: REP06542 Question Ref: H1

Site 2127

There are four sites, two to the north of West Ardsley and two to the south which are identified as green sites (refs: 1143B, 1143D, 1258 and 3365). These sites currently lie within the Green Belt. The Council have identified these sites as having the greatest potential to be allocated for housing and are therefore colour coded green.

We do not agree that these sites are the most suitable for housing, when the Tingley Station site, which does not lie within the Green Belt has been identified as an amber site. The Tingley Station site has far greater potential to be allocated for housing and deliver a large quantum of dwellings for the Outer South West area without the need for the loss of Green Belt land in this area.

Housing

Westerton Road, Tingley, Leeds

Name: Neil Dawson

Representor No: PRS05884

Representation ID: REP06563 Question Ref: H1

Suggested sites from Green to Red;

1029
1072
1143B
1143D
1200A
1258
1344
3365
3373A
3373C
3456A

All of the above sites are in the current Green Belt with the exception of the 3373A and 3373C which are open land.

The other sites are all located within the existing Green Belt and any development would lead to increased urban sprawl between the various townships in the Outer South West, and lead to coalescence between communities.

Development of the Green Belt sites would also reduce the open green area between settlements and create encroachment into the countryside around Morley.

In addition there is insufficient road capacity in the area particularly the very busy single carriageway A650 from East Ardsley to Tingley. Even if there is no development of the above sites there is in the allocation plan over 1,200 additional new houses close to the A650 which will put additional strain on this busy road.

The Haigh Moor sites are part of a natural valley which is popular for recreational activities. The whole site is considered best treated as one, therefore if the largest part 3373B is not to be used for housing then the other parts of the site should be treated in a similar manner. This should be retained as open green space.

Site 1072 is in the Green Belt and although there are properties adjacent it is located near to the A653 and shares similar characteristics to site 3078B which is not considered suitable for development. A development at this site would set a precedent for incursion into the Green Belt between Leeds and Kirklees.

See rep for full details.

Representation ID: REP07983 Question Ref: H1

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Green Sites outside the Core Public Transport Network

Table 1 below contains sites that are classified as 'Sites which have potential to be allocated for housing' but fall outside 400m of the current core bus network. Consideration needs to be given to if these sites would be able to meet the LDF public transport accessibility requirements should housing be brought forward. Significant developer contributions will be required at these sites to improve the public transport to meet the council LDF accessibility policies; particularly in the larger sites should these be brought forward for development. These include SHLAA ref: 2062, 1032, 1046, 1017 & 1055.

Sites which fall marginally outside the 400m catchments and have high bus frequencies or are small sites low capacity are less of concern but are flagged up nonetheless.

The table also includes accessibility assessments results to access other services and facilities within acceptable journey times on public transport.

[see table in full representation submitted which lists sites]

Representor No: PRS01133

Representation ID: REP03207 Question Ref: H7

3372

Lack of amenities – the amenities in the area cannot support the existing population of West Ardsley, never mind accepting an influx of possibly 5000 more.

- Virtually all the shops have closed over the years, there are now only 3 grocery shops in the area. Anyone living at the southern end of Haigh Moor Road has over 1 mile to travel to the nearest shop.

- The schools are overcrowded, Westerton Road has had more external classrooms added, so it cannot be extended. Hill Top School is nearly full now from the existing population growth, again it is extremely limited in expansion possibilities.

- Bus services are pathetic, services to Leeds, Dewsbury and Wakefield are hourly at best. Batley is only accessible from Wakefield –Batley Road. There are areas where buses have been removed completely. This week another service has been stopped.

- There are not any play areas for children, your own survey records this failing.

- There is only one medical centre with 8 doctors giving cover to some existing 15000 patients. To get an appointment with a specific GP can take 3 weeks, the centre has recently been extended to its limits so there is nowhere to go. Also there is only one pharmacist.

Traffic

All the roads in the area are in a bad state of repair, I have lived here for 28 years and Haigh Moor Road has never been resurfaced despite 3 new housing estates accessing it. In June 1992 the planning inspector denied a planning application (91/23/00350) for an annex for an invalid because although neither he nor his brother drove. The reason for this was "I am concerned that were an additional dwelling to be provided there would be no guarantee that it would not lead to additional traffic generation at some future time, perhaps through changed circumstances, with consequent adverse impact on highway safety." Yet here we are with a further 70 houses at Foxfields and Jude's Pond and a proposed 179 on these new sites, probably adding in excess of 500 vehicles to Haigh Moor Road.

There has been a water leak on HMR which despite being reported to Yorkshire Water is still flowing after 3 months and has now become 2 leaks. The western end of Westerton Road is in a dangerous state with potholes and speed restriction bumps. LCC appears to be unable to keep up with the maintenance of its roads in South Leeds.

LCC's attitude to this area seems to be that Ardsley is an outpost on the borders with Wakefield and Kirklees and beyond the borough or Morley, so we can be conveniently ignored. Ardsley is quite definitely being asked to provide the lion's share of new housing without any benefit, it has poor services and has become a dormitory area of Leeds.

Sites 3372 (Assumed as 3373 stated) & 3373 B - Red Agree with coding (Assumed)

I believe the areas in question are the only green areas left in the area for children to play, people to walk thier dogs etc. Tingley is already overcrowded with schools so much so that local children are having to travel to schools further away. this is the last of the green belt area left in tingley/ardsley. We already have too much traffic for such a built up area.

3373a

[and assume 1336]

I wish to strongly object to proposed green belt sites adjacent and behind my house being released as suitable for building. The proposed sites are shown on Map 33 - 3373a. My house was only built 3 years ago and was bought specifically for the semi rural aspect views and the fact it is safe for children in a cul-de-sac with no thru traffic. I am extremely appalled and concerned that this proposal has been addressed without informing us at all. This will result in us having to move home that we have invested every penny in and worked so hard for and a loss in value of at least £50-75k. And will now make it very difficult to sell. I am absolutely disgusted and will do everything in my power to stop this happening. I will also be attending the town hall meeting and will be involving all local MPs.

Representation ID: REP02119 Question Ref: H1

3373A - Green to red. Existing agricultural land - there is a food shortage. Bats are residing adjacent and kestrels. Access from Upper Green Drive is unsuitable. Too narrow and will be a danger to small children who play in their current cul de sac. Not a through road.

Representation ID: REP02128 Question Ref: H1

3373A - Green to red.

Damage to surrounding protected wildlife - bats, kestrels and bluebells. Also known landfill and quarry in area, potential methane. Health hazard. Lack of infrastructure, schools full, doctors full, road parking already bad and too congested.

Representation ID: REP02645 Question Ref: H1

1336 +3373/3A (Assumes she means 3373A) Westerton Road/Haigh Woods. Red

This is greenbelt that is adjacent and back of my house directly. My house was built and brought only 2 years ago for the view and cul-de-sac position for my child we paid an additional £60K for this privacy. This site will ruin my property and our lives and cause safety issue with through traffic end of Upper Green Drive and rear.

Sites 3373/3A (assume she means 3373A) is a landfill area!

Syke Road Post Office to the right derelict houses and land needs development.

Representation ID: REP05704 Question Ref: H1

I would most definitely like to make a Comment.

I wish to strongly object to proposed green belt sites adjacent and behind my house being released as suitable for building.

My address is [x]

The proposed sites are shown on Map 33 - 3373a

My house was only built 3 years ago and was bought specifically for the semi rural aspect views and the fact it is safe for children in a cul-de-sac with no thru traffic.

I am extremely appalled and concerned that this proposal has been addressed without informing us at all. Character of the area will change.

Name: Ann Williams

Representor No: PRS00407

Representation ID: REP02350 Question Ref: H1

3373A & 3373C Haigh Wood, West Ardsley - Green to Red
Damage to Haigh Wood and surrounding area - old historic site. Any more development would severely impact on this area in a detrimental way. This area needs protection not development due to flora and fauna of this area. Many bird species, bats, etc. A great number of people use this area for recreation and access to Haigh Moor Road and Batley Road. Access is required for Lee Fair, dating back to 1136 AD. (Surely no one can envisage the end of this oldest horse fair in the country).
The roads surrounding these sites are already clogged and there is a real danger of accidents to pedestrians due to the ongoing increase of traffic. My own address is almost inaccessible during term-time at Westerton School. Surrounding schools are already full and there is concern whether children reaching school age can even be accommodated in existing schools in the near future.
The whole community system would fail as Doctor's Surgeries, Dental Practices, etc are already turning people away because of the over population in this area.
We have a terrible public transport connection service and buses already have great trouble in negotiating Westerton and Skye roads at certain times of the day.
The suggested sites are well known undulating areas and this could prove difficult and costly to develop. There is also the mining and water wells to be considered.
Would the water supply be able to cope? The reservoir at Haigh Moor Road supplies this area.
If the trees (some of which are covered by a preservation order) are destroyed the area would lose all of its unique character and this would also impact on pollution levels.

3373A & 3373C Haigh Moor, Haigh Wood West Ardsley - Green to Red
We are already full!! Both public and private vehicles are clogging up on Westerton and Syke roads. Far more viable sites off Bradford Road or Thorpe Road.
Any further development would greatly and detrimentally impact on this historic and characterful area. Regards must be made to accommodate the oldest horse fair in the country (Lee Gap). The areas above provide well needed recreational space for walkers and cyclists and also access to Haigh Moor Road and Batley Road. Pollution would increase greatly if some of the natural habitat was disturbed as this is part of a site which is covered by a preservation order. There are numerous species of birds, plants, bats, and other creatures all native to this site.
Any development would impact on the scenery and views of residents in this area.
Our schools are at capacity already and any more vehicles in the area would give serious problems to the transport links and access to existing residential homes. We have limited shops in our area and not enough Doctor's surgeries or Dentists as it is! Where would all future children and adults go to school, doctors, dentists, etc.?
The site is very well documented as a mining area and consideration should be made to the water table in this area as there are wells and springs. Access would create major problems as the existing roads in our area were not designed for the existing amount of vehicles already trying to get from A to B.
I also have concerns regarding the pollution both from the lack of trees and the increase in traffic.
We have very poor public transport connections and a rise in buses would be totally unacceptable due to access at certain times.

3373A / 1336 -
Green to Red

Congestion

It now seems the norm that each house equates to two vehicles so the proposal of 205 houses means 410 additional cars.

We already experience severe traffic congestion at peak school times. From my observation the vast majority of parents bring their children to school in a car despite the fact that they live in the immediate locality.

The problems that this congestion brings, are dangerous and illegal parking with complete disregard to the safety of pedestrians and other road users. Cars are parked on corners at road junctions, on the pavement where passing with a pram is often impossible and parking already stretches down both Upper Green Way and Avenue. When challenged the drivers often become abusive. The police are aware of this situation and do appear to monitor it from time to time.

Schools

Can the local schools cope with all the additional pupils? Westerton School, Woodkirk School and Blackgates School have already been extended. Increased classroom sizes would have a detrimental effect on the teaching and learning of the children.

Lee Fair

Lee Fair has existed in this locality for hundreds of years and the locals are proud of its historical legacy. Would the Fair disappear completely or be moved away from the area. It would be very disappointing if this happened.

Green Belt

Representation ID: REP04561 Question Ref: H1

3373A Haigh Wood, West Ardsley. Change from Green to Red. Site is in the Green Belt, maintain as a wildlife habitat. There is poor access to the site. Phasing

If it is decided that one or both of sites 3373A and 3373C are to be allocated then I request that they are phased for development in the later years of the plan. This would have twin benefits in allowing the recent growth in the area to be accommodated within the community and services to be established to support it, and would allow previously developed allocations and windfall sites to be developed first. Without that phasing the volume house builders in the market will inevitably take such greenfield sites forward as they are easier and so offer greater returns. This would not demonstrate the primacy of the plan-led system as required by Para 8.13.

Highway Capacity

An increase in housing in this area would only add to traffic problems along the A650 the A653 and other minor roads when there is an accident on the M62 when drivers try to find an alternative route.

Highway Safety

I note the intention to serve site 3373A by a single access point, being Upper Green Drive to Upper Green Avenue to meet Westerton Road opposite the primary school and then on via other routes to the main highway network. I cannot believe that a single access point is sufficient to service this number of properties, and cannot accept that the point at which it meets Westerton Road is appropriate.

Summary

I do not believe that the residential development of sites 3373A and 3373C would be sustainable development required by NPPF and so I ask that they be omitted from the Plan. If they are to be retained I request that they be phased to prevent development for a period of say 15 years to allow the community to become settled from recent growth, new services and employment opportunities to be developed and to allow the development of sequentially preferable brownfield sites elsewhere in the city.

I trust that these comments assist your consideration of the future housing allocations in this area. Please add my details to your consultation list so that I can be advised of any future consultation exercises of this nature.

3373c Off Haigh Moor Road - Green to Red

Next to site of Haigh Wood. Would Mar an area of existing natural interest.

Again access would be via Haigh Moor Road

Congestion here with other proposed sites would be catastrophic for the residents in this area. Traffic would be too dense for the road network to handle

Schools and doctors full up in the area.

3373a Upper Green, Tingley/3373c Upper Green Tingley/1336 Upper Green Tingley - Green to Red
SITE ALLOCATION CHANGES —SITE NUMBERS 3373A / 3373C / 1336

We are completely against the development of the above sites for a number of reasons, both personal and in the overall interest of the people living within Greater Morley.

- Access —Suggested access to the new sites through current 'Upper Green' roads would not be viable as road width/layout does not comply with planning requirements for a throughroad.

At present certain areas of the roads cannot accommodate two cars at the same time, more houses mean more traffic. This could lead to huge health and safety issues for motorists and pedestrians alike. Currently traffic on these roads are already at a high especially at peak times and the start and end of the school day (Westerton Primary is directly opposite upper green and is extremely busy at drop off and pick up times).

- Local framework —The local schools (both primary and secondary) are already full and have waiting lists for children already living in the area. Primary schools such as Westerton (already considered a large primary with 100 children per year group) is full with a considerable waiting list, Blackgates Primary has already been expanded to cope with the demand and has no further scope to expand even more. Secondary schools such as Woodkirk and Morley Academy are full with waiting lists. Leeds City Council are aware that there are not enough secondary school places available in this area for children already in the state school system and have granted authority to build a free school in Leeds City Centre(to open 01/09/14). With this in mind perhaps redevelopment of areas surrounding the City Centre or areas within the City Centre should be considered.

- Local Doctors surgeries are already full and continue to take on new patients.

Appointments are non-existent with most people having to go to drop in clinics to sit and wait (sometimes for up to 2 hours). This is hugely problematic for vulnerable patients (small children and the elderly) that sometimes require immediate attention. As for registering with a local NHS dentist— it's virtually impossible!

- Impact on environment. Planning permission stated that when our house was built (2008) the builders had to maintain the few trees between adjoining properties because of impact on the local environment and also to provide screening. Yet the same council with their new plans are happy to see the destruction of acres of protected trees and shrubs (Haigh Woods). This would have a huge impact on wildlife where we have a thriving bird population (which is currently in decline nationally) and a number of protected bats in the area. These birds and bats live/breed and feed in the zones currently highlighted for development. Tingley's green fields are already in decline, brownfield sites should be considered for redevelopment before we destroy our environment further. Planning permission for 20,000 houses have already been granted within the Leeds Area that haven't been built yet, surely these houses should be built and derelict areas redeveloped before we consider destroying green fields and wooded areas.

- The value of current properties will be greatly affected by the addition of housing on the sites stated. Currently Upper Green Drive is one of the most expensive streets for house prices in WF3, houses are built to a high standard and of similar size/value. When we purchased our house in 2008 we paid a premium rate which took into account not only the quality of the house but the area in which the house was situated (idyllic views of green fields and woods). The planned development would have a huge impact on property value and with most houses on the street having been newly built or recently purchased (valued according to the location/setting) there is a major concern that many families would face the possibility of negative equity. The current economic climate is already taking its toll on many families; this would further financially impact them.

With this in mind perhaps redevelopment of areas surrounding the City Centre or areas within the City Centre should be considered.

- Local Doctors surgeries are already full and continue to take on new patients.

Appointments are non-existent with most people having to go to drop in clinics to sit and wait (sometimes for up to 2 hours). This is hugely problematic for vulnerable patients (small children and the elderly) that sometimes require immediate attention. As for registering with a local NHS dentist— it's virtually impossible!

- Impact on environment. Planning permission stated that when our house was built (2008) the builders had to maintain the few trees between adjoining properties because of impact on the local environment and also to provide screening. Yet the same council with their new plans are happy to see the destruction of acres of protected trees and shrubs (Haigh Woods). This would have a huge impact on wildlife where we have a thriving bird population (which is currently in decline nationally) and a number of protected bats in the area. These birds and bats live/breed and feed in the zones currently highlighted for development. Tingley's green fields are already in decline, brownfield sites should be considered for redevelopment before we destroy our environment further. Planning permission for 20,000 houses have already been granted within the Leeds Area that haven't been built yet, surely these houses should be built and derelict areas redeveloped before we consider destroying green fields and wooded areas.

- The value of current properties will be greatly affected by the addition of housing on the sites stated. Currently Upper Green Drive is one of the most expensive streets for house prices in WF3, houses are built to a high standard and of similar size/value. When we purchased our house in 2008 we paid a premium rate which took into account not only the quality of the house but the area in which the house was situated (idyllic views of green fields and woods). The planned development would have a huge impact on property value and with most houses on the street having been newly built or recently purchased (valued according to the location/setting) there is a major concern that many families would face the possibility of negative equity. The current economic climate is already taking its toll on many families; this would further financially impact them.

3373a Upper Green, Tingley/3373c Upper Green Tingley/1336 Upper Green Tingley - Green to Red
SITE ALLOCATION CHANGES —SITE NUMBERS 3373A / 3373C / 1336

We are completely against the development of the above sites for a number of reasons, both personal and in the overall interest of the people living within Greater Morley.

- Access —Suggested access to the new sites through current 'Upper Green' roads would not be viable as road width/layout does not comply with planning requirements for a throughroad.

At present certain areas of the roads cannot accommodate two cars at the same time, more houses mean more traffic. This could lead to huge health and safety issues for motorists and pedestrians alike. Currently traffic on these roads are already at a high especially at peak times and the start and end of the school day (Westerton Primary is directly opposite upper green and is extremely busy at drop off and pick up times).

- Local framework —The local schools (both primary and secondary) are already full and have waiting lists for children already living in the area. Primary schools such as Westerton (already considered a large primary with 100 children per year group) is full with a considerable waiting list, Blackgates Primary has already been expanded to cope with the demand and has no further scope to expand even more. Secondary schools such as Woodkirk and Morley Academy are full with waiting lists. Leeds City Council are aware that there are not enough secondary school places available in this area for children already in the state school system and have granted authority to build a free school in Leeds City Centre(to open 01/09/14). With this in mind perhaps redevelopment of areas surrounding the City Centre or areas within the City Centre should be considered.

- Local Doctors surgeries are already full and continue to take on new patients.

Appointments are non-existent with most people having to go to drop in clinics to sit and wait (sometimes for up to 2 hours). This is hugely problematic for vulnerable patients (small children and the elderly) that sometimes require immediate attention. 1330b, 3373a Tingley - Green to Red

Surface water, flooding.

Wildlife, bats, newts. Nature and grassland habitats

The Upper Green cul de sac is not suitable to serve up to 130 more houses. Severe dangers at school times.

Changes to landscape.

Primary and secondary schools are already full and difficult to expand further.

Name: Lynne Watson

Representor No: PRS01020

Representation ID: REP03075 Question Ref: H1

1330b, 1336, 3373a - Green to Red

Current drainage in the area is not sufficient, causing flooding in Westerton Road. Further housing development will exacerbate the problem.

Extra traffic will be created by this development as the current bus services are insufficient .

The proposed site will decimate a natural environment for small mammals, birds and other wildlife.

Representation ID: REP03207 Question Ref: H1

3373A
Lack of amenities – the amenities in the area cannot support the existing population of West Ardsley, never mind accepting an influx of possibly 5000 more.
- Virtually all the shops have closed over the years, there are now only 3 grocery shops in the area. Anyone living at the southern end of Haigh Moor Road has over 1 mile to travel to the nearest shop.
- The schools are overcrowded, Westerton Road has had more external classrooms added, so it cannot be extended. Hill Top School is nearly full now from the existing population growth, again it is extremely limited in expansion possibilities.
- Bus services are pathetic, services to Leeds, Dewsbury and Wakefield are hourly at best. Batley is only accessible from Wakefield –Batley Road. There are areas where buses have been removed completely. This week another service has been stopped.
- There are not any play areas for children, your own survey records this failing.
- There is only one medical centre with 8 doctors giving cover to some existing 15000 patients. To get an appointment with a specific GP can take 3 weeks, the centre has recently been extended to its limits so there is nowhere to go. Also there is only one pharmacist.

Traffic
All the roads in the area are in a bad state of repair, I have lived here for 28 years and Haigh Moor Road has never been resurfaced despite 3 new housing estates accessing it. In June 1992 the planning inspector denied a planning application (91/23/00350) for an annex for an invalid because although neither he nor his brother drove. The reason for this was “I am concerned that were an additional dwelling to be provided there would be no guarantee that it would not lead to additional traffic generation at some future time, perhaps through changed circumstances, with consequent adverse impact on highway safety.” Yet here we are with a further 70 houses at Foxfields and Jude's Pond and a proposed 179 on these new sites, probably adding in excess of 500 vehicles to Haigh Moor Road.

There has been a water leak on HMR which despite being reported to Yorkshire Water is still flowing after 3 months and has now become 2 leaks. The western end of Westerton Road is in a dangerous state with potholes and speed restriction bumps. LCC appears to be unable to keep up with the maintenance of its roads in South Leeds.

LCC's attitude to this area seems to be that Ardsley is an outpost on the borders with Wakefield and Kirklees and beyond the borough or Morley, so we can be conveniently ignored. Ardsley is quite definitely being asked to provide the lion's share of new housing without any benefit, it has poor services and has become a dormitory area of Leeds.

3373A -Is it proposed that this site should link up with site 3373c by the construction of through roads? If this is the case , I would have even more serious concerns of the effect on local traffic and believe that the highways Dept should be concerned about suitable access and road safety issues.

Name: James Pow

Representor No: PRS01505

Representation ID: REP03644 Question Ref: H1

3373A Green TO RED, We oppose the development of the above sites for the following reasons;

1. The current roads on the upper Green estate will not be able to cope with an increase in traffic. In particular, the junction of the upper green way and upper green drive is already very dangerous. Cars tend to have to use the middle of the road to get around the corner and people who live on the immediate estate are aware they have to slow down and be mindful of oncoming cars and children playing in the proximity. An increase in traffic is highly likely to cause a serious accident on this bend. The junction of Westerton Road and upper green way already come to a complete standstill at the start and end of the school day.
2. Primary schools and high schools in the area oversubscribed and have waiting lists. Westerton primary school is the nearest school to the propose3d development and is the largest primary school in Leeds.
3. The field's on the proposed development are currently used to grow crops for food. The woodland area is used by the local people for recreation.
4. The destruction of protected trees and shrubs would have a negative effect on wildlife.
5. The local healthcare facilities are currently at full capacity.
6. There is little employment within walking distance from the proposed development.

We consider that additional housing should not be built on greenbelt land. Instead brownfield sites should be used where wildlife, agricultural land and woodland would not be affected and the infrastructure would be more suitable.

3373A -

I am making my response by letter; the online boxes rejected my comments because they exceed 3,000 digits.

3373A Haigh Wood, West Ardsley, 3373C Haigh Wood, West Ardsley, 1336 Westerton Road, West Ardsley, 3456A Ardsley Reservoir, 1258 Westerton Road, Tingley, 3365 Westerton Road, Tingley, 1032 Bradford Road, 1143B & 1143D Thorpe Lane, Tingley.

Objections.

The Core Strategy seeks to be "fair". The word is used in paragraph 1.2 and again in 1.14. Yet the proposed green housing sites when taken together would definitely not be fair to West Ardsley and Tingley. No justification has been given as to why there is such a concentration here, nor any evidence of local need. Indeed, paragraph 4.6.14 states that "The SHMA 2011 was not able to identify any geographically specific need for new housing based on population growth." The 13 green housing sites in Ardsley and Tingley seem to have been assessed individually rather than their cumulative impact. This impact is potentially very much greater when considered alongside Kirklees Council's proposals for the Chidswell area, and comes on top of the huge impact on West Ardsley of major housing development in the 1990s - the estates now accessed by Lowry Road and Constable Road. The newly proposed sites taken together would consolidate semi-rural groups of settlements into a predominantly urban residential area. Most of the open frontages to Bradford Road and Westerton Road would be built on, removing open aspects and distant views and tending towards the creation of amorphous sprawl of development across the area along the length of the A650.

Site 3373A. Additional objections

1. Local character and identity

Development of this site would be contrary to the following sections of the Council's policy SP1 in the Core Strategy:

SP1 (i) states: "Smaller Settlements will contribute to development needs, with the scale of growth having regard to the settlement's size, function and sustainability."

Site 3373A, with its estimated capacity of 130 dwellings, does not have regard to the size, function and sustainability of West Ardsley.

SP1 (iii) states: "For development to respect and enhance the local character and identity of places and neighbourhoods". The local character and identity of West Ardsley would be seriously threatened by 3373A, especially when combined with sites 3373C and 1336, and would make its component areas of Upper Green, Haigh Moor and Hill Top barely distinguishable from each other.

Three letters from the Planning Inspectorate were used in the Council's own evidence to the Unitary Development Plan public inquiry in 1995. In paragraph 39 of his report on the Morley Local Plan, the inspector considered that the planned development at Haigh Wood (site WA2H) would have a "very serious impact upon the character and environment of West Ardsley". He concluded in paragraph 10: "In the past, development in the Morley area would appear to have been sporadic and opportunist, placing the identity of the smaller settlements at risk and tending towards the creation of amorphous sprawl of development across the area along the length of the A650 Bradford to Wakefield road. In my view, the further diffusion of the existing loosely-knit settlement pattern should, as far as possible, be resisted."

Considering appeals in 1986 on 81/23/00212 and 81/23/00213 (broadly the same area as LDF sites 3373A/B/C and 1336) the inspector said "It would virtually eliminate the open centre and consolidate the semi-rural group of settlements into a predominantly urban residential area". This was endorsed in the Secretary of State's decision letter.

In 1994, a third inspector dismissed an appeal to develop land at Arthington Close near the edge of Haigh Wood because it would "unacceptably erode the fringe of this rural area and would lead to pressure for further encroachment of residential development, most particularly in the fields to the west...".

Although some years have passed since these decisions, the character and environment of the area are still semi-rural and just as delicate. When cogent arguments have been repeatedly made against development of the 3373 areas by the Secretary of State, by three planning inspectors and by Leeds Council itself (in evidence to the UDP inquiry), there can be no justification for sites 3373A, 3373C and 1336 being pursued for residential development in the LDF. They should instead be reclassified as "red" and withdrawn from consideration for development when producing the next stage of the plan.

2. Damage to Haigh Wood and Baghill Beck valley

Development of this site would be contrary to the Council's policy P12 in the Core Strategy:

"The character, quality and biodiversity of Leeds' townscapes and landscapes, including their historical and cultural significance, will be conserved and enhanced to protect their distinctiveness through stewardship and the planning process." The secluded Haigh Wood valley comprises the central portion of site 3373A, including part of the wood covered by a Tree Preservation Order. Residential development would prejudice the objectives underlining this policy as set out in paragraphs 5.3.46 to 5.3.48 of the Core Strategy including: "The Council seeks to protect and enhance the varied landscapes of Leeds and the assets they contain, from valued local trees, the countryside to nationally designated landscape, fauna and flora".

This view was endorsed by three planning inspectors and again in the Council's evidence, given by Mr G B Andrews, at the UDP inquiry. In his paragraph 4.3.6, Mr Andrews stated: I refer to the conclusions reached by the inspectors at the two subsequent appeal cases in 1985 and 1994. In each case it is acknowledged that the Haigh Wood area is of value as an area of attractive open farmland with a rural character and provides an important amenity in the local area". Even the Council's own assessment for the LDF states that the site is: "Not supported (RED). This site includes Haigh Wood and Baghill Beck Local Nature Area which fall under UK Biological Action Plan priority habitats - a mixture of woodland, scrub and grassland

Site Comments - Outer South West

habitats alongside Baghill Beck. There are a number of wide hedgerow/woodland belts throughout the site that provide a valuable habitat. Water vole has been recorded on the Hey Beck. The Baghill Beck flows into this water course and could support this species. Bats to consider."

3. Highway access. The Upper Green culs-de-sac are not designed or suitable to serve up to 130 more houses. They would become much less safe for children to play in and the already severe dangers at school times would be exacerbated.

4. Schools. Primary and secondary schools already full and difficult to expand further.

5. Agricultural land. Good quality agricultural land would be lost.

6. Viability. Extra costs from: a. parts of 3373A have serious levels problems and look undevelopable; b. bell pits known to exist in the area from former mining; c. elimination of Japanese Knotweed.

When cogent arguments have been repeatedly made against development of the 3373 areas by the Secretary of State, by three planning inspectors and by Leeds Council itself (in evidence to the UDP inquiry), there can be no justification for sites 3373A, 3373C and 1336 being pursued for residential development in the LDF. They should instead be reclassified as "red" and withdrawn from consideration for development when producing the next stage of the plan.

2. Damage to Haigh Wood and Baghill Beck valley

Development of this site would be contrary to the Council's policy P12 in the Core Strategy:

"The character, quality and biodiversity of Leeds' townscapes and landscapes, including their historical and cultural significance, will be conserved and enhanced to protect their distinctiveness through stewardship and the planning process." The secluded Haigh Wood valley comprises the central portion of site 3373A, including part of the wood covered by a Tree Preservation Order. Residential development would prejudice the objectives underlining this policy as set out in paragraphs 5.3.46 to 5.3.48 of the Core Strategy including: "The Council seeks to protect and enhance the varied landscapes of Leeds and the assets they contain, from valued local trees, the countryside to nationally designated landscape, fauna and flora".

This view was endorsed by three planning inspectors and again in the Council's evidence, given by Mr G B Andrews, at the UDP inquiry. In his paragraph 4.3.6, Mr Andrews stated: I refer to the conclusions reached by the inspectors at the two subsequent appeal cases in 1985 and 1994. In each case it is acknowledged that the Haigh Wood area is of value as an area of attractive open farmland with a rural character and provides an important amenity in the local area". Even the Council's own assessment for the LDF states that the site is: "Not supported (RED). This site includes Haigh Wood and Baghill Beck Local Nature Area which fall under UK Biological Action Plan priority habitats - a mixture of woodland, scrub and grassland habitats alongside Baghill Beck. There are a number of wide hedgerow/woodland belts throughout the site that provide a valuable habitat. Water vole has been recorded on the Hey Beck. The Baghill Beck flows into this water course and could support this species. Bats to consider."

3. Highway access. The Upper Green culs-de-sac are not designed or suitable to serve up to 130 more houses. They would become much less safe for children to play in and the already severe dangers at school times would be exacerbated.

4. Schools. Primary and secondary schools already full and difficult to expand further.

5. Agricultural land. Good quality agricultural land would be lost.

6. Viability. Extra costs from: a. parts of 3373A have serious levels problems and look undevelopable; b. bell pits known to exist in the area from former mining; c. elimination of Japanese Knotweed.

3373A & 3373C - Green to Red

We object for the following reasons:

We live only 320 metres from Hill Top School, having moved here in November 2010 we have been unable to place our now 7 year old son at the school due to it being full. We have been at the top of the waiting list for several terms, but have been unable to get him into the school. We have also been unable to get our son into Westerton primary the 2nd nearest primary school. The only school that can be offered are poor performing schools out of the area. Where are additional families going to send their children to school - out of the area, driving them to school and increasing traffic! Access via Hill Top Lane will lead to a significant increase in traffic, the reason for moving to this area was to be away from traffic and to live somewhere where it is safe for children to play. Making Hill Top Lane a through road would not be safe for young children.

At the junction at the end of Hill Top Lane it is already extremely difficult to turn right onto Batley Road, this is due to Batley Road already carrying heavy traffic, there is a blind corner and hill to the right and there are always cars parked opposite the junction meaning that you have to drive on the wrong side of the road round a corner meeting the brow of a hill.

Turning right out of Hill Top Grove onto Hill Top Lane has very poor visibility due to a large tree, increased traffic will cause difficulty in safely turning right onto Hill Top Lane. West Ardsley is a sleepy village with very little other than housing and woodland in the area. People live here in order to enjoy the surrounding countryside and woodland and the wildlife it has to offer. Not only will building in the area destroy the enjoyment residents have in the countryside and wildlife, but as there is so little in the area to do i.e. Healthcare, Shops, Parks, Fitness, Children's Entertainment, any new houses would lead to increased traffic as residents have to drive to find these things.

As an example our closest doctors surgery is at East Ardsley 2 miles drive from our home. To book an appointment, there is generally a 2 week wait just to get a routine appointment. What is proposed to cope with the additional demand on doctors surgeries and health services or will we now need to wait several more weeks just to get a routine appointment?

The wildlife in the area is quite special, we regularly have Jays visiting our garden, quite rare for these shy birds. There are many, many different species of birds in the areas, hedgehogs, foxes, what is proposed to protect these creatures?

In summary the residents of West Ardsley live here purely to enjoy wildlife, countryside, lack of traffic and tolerate the fact that they must travel out of the area for everything including for ourselves a school! To remove the wildlife, countryside and increase traffic and number of residents WOULD RUIN THIS AREA AND THE LIVES OF THE RESIDENTS!

3373A / 3373C -

We are disgusted that as residents who live directly adjacent to 3373C we received no notification of these proposals and it was down to a neighbour who called at our house yesterday to make us aware and also that the closing date for submitting comments is Monday 29th July!

We object for the following reasons:

We live only 320 metres from Hill Top School, having moved here in November 2010 we have been unable to place our now 7 year old son at the school due to it being full. We have been at the top of the waiting list for several terms, but have been unable to get him into the school. We have also been unable to get our son into Westerton primary the 2nd nearest primary school. The only school that can be offered are poor performing schools out of the area. Where are additional families going to send their children to school - out of the area, driving them to school and increasing traffic!

Access via Hill Top Lane will lead to a significant increase in traffic, the reason for moving to this area was to be away from traffic and to live somewhere where it is safe for children to play. Making Hill Top Lane a through road would not be safe for young children.

At the junction at the end of Hill Top Lane it is already extremely difficult to turn right onto Batley Road, this is due to Batley Road already carrying heavy traffic, there is a blind corner and hill to the right and there are always cars parked opposite the junction meaning that you have to drive on the wrong side of the road round a corner meeting the brow of a hill.

Turning right out of Hill Top Grove onto Hill Top Lane has very poor visibility due to a large tree, increased traffic will cause difficulty in safely turning right onto Hill Top Lane.

West Ardsley is a sleepy village with very little other than housing and woodland in the area. People live here in order to enjoy the surrounding countryside and woodland and the wildlife it has to offer.

Not only will building in the area destroy the enjoyment residents have in the countryside and wildlife, but as there is so little in the area to do i.e. Healthcare, Shops, Parks, Fitness, Children's Entertainment, any new houses would lead to increased traffic as residents have to drive to find these things.

As an example our closest doctors surgery is at East Ardsley 2 miles drive from our home. To book an appointment, there is generally a 2 week wait just to get a routine appointment. What is proposed to cope with the additional demand on doctors surgeries and health services or will we now need to wait several more weeks just to get a routine appointment?

The wildlife in the area is quite special, we regularly have Jays visiting our garden, quite rare for these shy birds. There are many, many different species of birds in the areas, hedgehogs, foxes, what is proposed to protect these creatures?

In summary the residents of West Ardsley live here purely to enjoy wildlife, countryside, lack of traffic and tolerate the fact that they must travel out of the area for everything including for ourselves a school! To remove the wildlife, countryside and increase traffic and number of residents WOULD RUIN THIS AREA AND THE LIVES OF THE RESIDENTS!

We have completed the relevant forms on the [leeds.gov.uk](https://www.leeds.gov.uk) website and I trust that as my local MP you will represent my views at the relevant hearings/meetings and do what you can to prevent this proposal going ahead.

Representation ID: REP04315 Question Ref: H9

3373A – This site is designated open land but as it forms part of the Haigh Wood Estate it should be protected as it forms a valuable green space for local residents.

Representation ID: REP04315 Question Ref: H2

3373A – This site may be designated as open land, but it should be green belt. It forms parts of the paths to Haigh Wood and is a valuable open space for residents of West Ardsley.

Also traffic has to be a major consideration. 130 houses would generate a lot of traffic on Westerton / Haigh Moor Road which are already busy.

My objections to this development are;

1. Volume of traffic on Hilltop Lane (too narrow) leading onto Batley Road
2. Noise and car exhaust pollution from volume of traffic expected

Name: Annie McNally

Representor No: PRS03059

Representation ID: REP00387 Question Ref: G1

I think it is disgusting that the council are wanting to build on greenbelt land on proposed Plots 1336, 3373, 3372, 3373A, 3373B, 3373C, 1330B, 1330A, 536. And 3456A. It is an area of outstanding beauty where people enjoy walking, running, playing and riding horses. Many wild animals live in the fields and to take it away would turn this area into a concrete jungle. It would mean my view at the back would be eradicated, lowering the value of my house, but more importantly the pleasure I have everyday when I look across the field. This city needs green areas where we can walk and get away from the stresses of life. Also, to the rear of my property there is bindweed in the field which I believe would make it difficult for any developers to be able to build on that land. There are plenty of brown field sites which can be developed. Do not take away our green spaces. Totally outrageous.

Representation ID: REP01153 Question Ref: H1

New housing developments already under way on Haigh Moor Road. Further development will create increased access problems for traffic.-I have concerns about road safety due to the increased level of traffic that will arise and access roads through current housing developments will put children in particular at risk.-Schools in the immediate vicinity are generally full. Where will extra children go.-Local doctors already been extended substantially in recent years to deal with increased population. Further housing development will only increase pressure on this resource-It will be the loss of a local amenity enjoyed by many-Wildlife is plentiful in this area and adds to the enjoyment of many as well as providing habitat to animals and birds. Numerous bats can be seen in the area on an evening, these will be lost

Representation ID: REP01153 Question Ref: H7

Maintain green belt land but also development of this area would be difficult, costly and unpractical due to gradient of land

Representation ID: REP01159 Question Ref: H2

Map 33 Site 3373 A & C The reason is given above, however summarised as: Access & Road Safety Issues from Hill Top Grove onto Hill Top Lane and from Hill Top Lane onto Batley Road. Increase traffic to an area not designed for traffic, some streets do not even have a pavement! Lack of schools and healthcare in the area to cope with existing demand. Wildlife and Countryside is the only thing West Ardsley has to offer and the only reason people choose to live here. Building on the green areas will ruin the area and the lives of residents.

Name: Michael Short

Parts of 3373A which are immediately adjacent to the wood in 3373B. Parts of this are in what local people consider to be the wood.

Representation ID: REP00155 Question Ref: H2

3373A: suggested access via narrow, badly designed estate roads which are about adequate to service the existing housing. The site, in parts, is probably not economical to develop (topography, drainage, old mines etc). Will entail removal of many trees which form part of a pleasant, wooded local amenity. If developed, the character of this space (a quiet valley) will be ruined. Applying to 3373A and also 3373C, 1336 and 1337: Local roads already saturated, no places in schools or GPs, massive development will ruin the village's feel of the area.

Representation ID: REP01941 Question Ref: H1

Whilst we are in broad agreement with the designation of green sites at Haigh Wood in the Outer South West area of Leeds, we have concerns regarding the boundaries between the 'green' and 'red' sites. We agree with and support the allocation of land at Haigh Wood for housing with a central area in the vicinity of Haigh Wood LNA left undisturbed, but feel that this primary objective can be better achieved with different boundaries to sites 3373A, 3373B, 3373C and 1336

Representation ID: REP01941 Question Ref: H3

As a corollary to the explanation provided at H2 and in the attached document, we suggest that parts of site 3373B be re-designated as green, in accordance with Figure 6 and Appendix 1 of that document. These sections are in areas which are not needed to be kept undeveloped for the preservation of the green corridor between the two development parcels. New access points, via Upper Green Avenue/Upper Green Way and a new junction onto Westerton Road will facilitate improved integration into the transport network. As mentioned above, the alignment of site 3373B would be more logical if it followed the suggested revised indicative masterplan included in the attached document (at Figure 6 and Appendix 1). The green corridor will be further protected by the removal of the previously suggested vehicular link road between the two parts of the Haigh Wood site. The new alignment will preserve the vast majority of the hedges and existing trees on the site, whilst allowing a more logical and achievable layout for future development. Additionally, no development is proposed within the vicinity of the LNA or the stream running down the valley.

Representation ID: REP01941 Question Ref: H8

As explained at H3 and in the attached documents, we believe that sections of site 3373B should be re-designated as green, instead of parts of site 1336 and 3373A.

Representation ID: REP01941 Question Ref: H9

As explained at H2 and in the attached documents, we suggest that parts of sites 1336 and 3373A would be more suitable for colour coding as red, whilst parts of site 3373B should be green.

Representation ID: REP01941 Question Ref: H11

The suggested revised allocations at Haigh Wood (see Figure 6 and Appendix 1 of the attached document) ('green' land) are all suitable for short term delivery.

Representation ID: REP01941 Question Ref: H2

We agree with the Council that the central valley at Haigh Wood should be excluded from development, as a green corridor between proposed development sites. This was the Council's intention in designating site 3373B as red. However, the alignment of the valley suggested by site 3373B does not accurately reflect the topography of the area, the trees, the stream and the LNA and how these will affect potential development, nor does it align with what we suggest is the true extent of the central valley. We therefore suggest that sections of sites 3373A and 1336 be re-designated as red, in accordance with the attached documents (Document for Residential and Open Space Allocation Addendum dated July 2013, in particular Figure 6 and Appendix 1, and the covering letter) outlining the detailed justification for our proposed new alignment for the central valley. The sections of sites 3373A and 1336 which we suggest are re-designated as red are not suitable for development, as they incorporate important arboricultural features which will be difficult to incorporate into a housing development and are best left as part of the green corridor between the two development parcels. Conversely, parts of site 3373B should be added as green, not red, for similar reasons, but in reverse; the area can be developed without harm to what is sought to be protected, as further explained below.

Representation ID: REP01397 Question Ref: H2

3373A, 3373C and 536. If you go ahead and build on these sites, it has been stated that Haigh wood would act as a 'green belt' for recreational purposes. The area of wood that you are talking about is barely wider than 100m and probably no longer than 500m in length!! The other reasons I have given in detail above in that I am worried this area is going to become an urban sprawl, with no parkland (albeit we have the reservoir) designated anywhere. Small thin strips of land between developments are not my idea of recreational areas - if you develop this area, then I believe you should be looking at putting in areas similar to Middleton or Roundhay park. I also don't agree with your assessment of site 1135 off Dewsbury road. Your statement should say - too costly for any developer to clear the station area, therefore not a viable proposition!!! Yes we all know it's far easier to pick a nice green field, scrape off the top soil, lay foundations, and build (for maximum profit)

sites 3373A, 3373B, 3365,1258,site 1330B 464 houses in such a small vicinity is unsustainable, there are currently just over 300 pupils at Hill Top Primary School with no room for any expansion, the school is full and the same is true of Westerton. Leeds City Council have in their allocation plan confirmed that Ardsley and Robin Hood have a deficiency in parks and gardens (the only area in Leeds South West to be deficient)natural greenspace should be used to reduce the deficit and improve our community. Our GP surgeries are at breaking point the surgery at Leigh View was recently extended and it's difficult to envisage how this could be extended further.Further erosion of the demarcation between West Ardsley & Tingley – , the two areas will be barely distinguishable from each other which is contrary to the Councils policy SP1 which clearly states smaller Settlements will contribute to development needs, with the scale of growth having regard to the settlement's size, function and sustainability. If these plans were approved it will no doubt result in urban sprawl with no identifiable boundaries. Our fields provide a public amenity development would virtually eliminate the open centre and consolidate the semi-rural group of settlements into a predominantly urban residential area". This view was endorsed by the Secretary of State in their past decision letter.Our road network was not built to support the existing volume of traffic , we do not have the infrastructure to support development of this scale, our public transport links are very poor with only one bus an hour into Leeds, the only viable means of transportation is by car which will have a cumulative impact on the A650 and A653 which are already congested.

Representation ID: REP00848 Question Ref: H9

site 3373A and 3373c should be coded red for all the issues previously stated plus site 3373A Lee gap Fair is held twice a year in these fields, the fair is the oldest horse fair in England dating back to 1136 and forms part of the history and heritage of the area.site 3373C It can be argued that the highways infrastructure for Site 3373B is inadequate, there are Highways concerns re poor accessibility for the number of houses proposed and then there is the issue of Highways safety with the junction of Hilltop Lane being within 100 metres of the primary school.

Question Ref: General comment

Site 3373C Objections1. Local character and identityDevelopment of this site would be contrary to the following sections of the Council's policy SP1 in the Core Strategy:1. SP1 (i) states: "Smaller Settlements will contribute to development needs, with the scale of growth having regard to the settlement's size, function and sustainability." Site 3373A, with its estimated capacity of 130 dwellings, does not have regard to the size, function and sustainability of West Ardsley.SP1 (iii) states: "For development to respect and enhance the local character and identity of places and neighbourhoods". The local character and identity of West Ardsley would be seriously threatened by 3373a, 3373C and 1336, and would make its component areas of Upper Green, Haigh Moor and Hill Top barely distinguishable from each other.My view accords with three decision letters from the Planning Inspectorate which were used in the Council's own evidence to the Unitary Development Plan public inquiry in 1995. In paragraph 39 of his report on the Morley Local Plan, the inspector considered that the planned development at Haigh Wood (site WA2H) would have a "very serious impact upon the character and environment of West Ardsley". He concluded in paragraph 10: "In the past, development in the Morley area would appear to have been sporadic and opportunist, placing the identity of the smaller settlements at risk and tending towards the creation of amorphous sprawl of development across the area along the length of the A650 Bradford to Wakefield road. In my view, the further diffusion of the existing loosely-knit settlement pattern should, as far as possible, be resisted."Considering appeals in 1986 on 81/23/00212 and 81/23/00213 (broadly the same area as LDF sites 3373A/B/C and 1336) the inspector said "It would virtually eliminate the open centre and consolidate the semi-rural group of settlements into a predominantly urban residential area". This was endorsed in the Secretary of State's decision letter.In 1994, a third inspector dismissed an appeal to develop land at Arthington Close near the the edge of Haigh Wood because it would "unacceptably erode the fringe of this rural area and would lead to pressure for further encroachment of residential development, most particularly in the fields to the west..."Although some years have passed since these decisions, the character and environment of the area are still semi-rural and just as delicate. When cogent arguments have been repeatedly made against development of the 3373 areas by the Secretary of State, by three planning inspectors and by Leeds Council itself (in evidence to the UDP inquiry), there can be no justification for sites 3373A, 3373C and 1336 being pursued for residential development in the LDF. They should instead be reclassified as "red" and withdrawn from consideration for development when producing the next stage of the plan.2. Damage to Haigh Wood and Baghill beck valleyDevelopment of this site would be contrary to the Council's policy P12 in the Core Strategy:"The character, quality and biodiversity of Leeds' townscapes and landscapes, including their historical and cultural significance, will be conserved and enhanced to protect their distinctiveness through stewardship and the planning process." The secluded Haigh Wood valley comprises the central portion of site 3373A, including part of the wood covered by a Tree Preservation Order. Residential development would prejudice the objectives underlining this policy as set out in paragraphs 5.3.46 to 5.3.48 of the Core Strategy including: "The Council seeks to protect and enhance the varied landscapes of Leeds and the assets they contain, from valued local trees, the countryside to nationally designated landscape, fauna and flora". This view was endorsed by three planning inspectors and again in the Council's evidence, given by Mr G B Andrews, at the UDP inquiry. In his paragraph 4.3.6, Mr Andrews stated: I refer to the conclusions reached by the inspectors at the two subsequent appeal cases in 1985 and 1994. In each case it is acknowledged that the Haigh Wood area is of value as an area of attractive open farmland with a rural character and provides an important amenity in the local area". Even the Council's own assessment for the LDF states that the site is: "Not supported (RED). This site includes Haigh Wood and Baghill Beck Local Nature Area which fall under UK Biological Action Plan priority habitats - a mixture of woodland, scrub and grassland habitats alongside Baghill Beck. There are a number of wide hedgerow/woodland belts throughout the site that provide a valuable habitat. Water vole has been recorded on the Hey Beck. The Baghill Beck flows into this water course and could support this species. Bats to consider."3. FairnessThe Core Strategy seeks to be "fair". The word is used in paragraph 1.2 and again in 1.14. Yet the proposed green housing sites when taken together would definitely not be fair to West Ardsley and Tingley. No justification has been given as to why there is such a concentration here, nor any evidence of local need. Indeed, paragraph 4.6.14 states that "The SHMA 2011 was not able to identify any geographically specific need for new housing based on population growth." The sites seem to have been assessed individually rather than their cumulative impact. This impact is potentially very much greater when considered alongside Kirklees Council's proposals for the Chidswell area. 4. Highway access The Upper Green culs-de-sac and Hill Top Lane cul-de-sacs are not suitable to serve more houses. They would become much less safe for children to play in and the already severe dangers at school times would be exacerbated.5. SchoolsPrimary and secondary schools already full and difficult to expand further.6. Agricultural landGood quality agricultural land would be lost.7. ViabilityExtra costs from: a. parts of 3373A and 3373C have serious levels problems and look undevelopable; b. bell pits known to exist in the area from former mining; c. elimination of Japanese Knotweed.The site on Westerton Road from Regency Gardens to Westerton Wood if developed will see 117 new homes - this land is currently classed as green belt (site 3365 = 83 homes and site 1258 = 34 homes) development here will represent a major incursion into the Green belt and will create further pressure on Ardsley reservoir as a local beauty spot. Development of sites 3365 and 1258 will result in the loss of valuable agricultural land, there are a number of wide hedgerow and woodland belts throughout the site that provide a valuable habitat for wildlife in particular bats. Development of the sites on Westerton Road will result in the amorphous sprawl of development across the area along the whole length of the Westerton Road.Site 1330B is an extension of the building that is currently ongoing adjacent to Jude's pond - and is for a further 32 houses ! This site has major highways access issues and has less than the recommended visibility splay for highways safety - further development of this site will exasperate current problems regarding drainage on the land - Haigh Moor Road residents already have to deal with flooding of the pavements and highways in the vicinity of Jude's pond. 464 houses in such a small vicinity is unsustainable, there are currently just over 300 pupils at Hill Top Primary School with no room for any expansion, the school is full and the same is true of Westerton which as you know was a small village school 20 years ago but is now one of the biggest primary schools in the Leeds district and all because of the amount of building that has taken place over recent years.Leeds City Council have in their allocation plan confirmed that Ardsley and Robin Hood have a deficiency in parks and gardens (the only area in Leeds South West to be deficient) - our children already have very little designated play areas, they have also confirmed that we are deficient in outdoor sports areas and facilities for children to play. We have however got a surplus of natural green space which is currently under threat of housing - if this natural greenspace is to be used for any purpose, surely it should be used to reduce the deficit and improve our community. Further reduction of amenity greenspace in an area which is seeing more and more housing development is unfair and unsustainable.Our GP surgeries are at breaking point with current waiting times for appointments being in excess of two weeks, the surgery at Leigh View was recently extended and it's difficult to envisage how this could be extended further to serve the population boom that will ensue if all these sites are developed.Further erosion of the demarcation between West Ardsley & Tingley - soon the two settlements will merge into one and West Ardsley as a separate community will be subsumed into its near neighbour, the two areas will be barely distinguishable from each other which is contrary to the Councils policy SP1 which clearly states smaller Settlements will contribute to development needs, with the scale of growth having regard to the settlement's size, function and sustainability. If these plans were approved it will no doubt result in urban sprawl with no identifiable boundaries.Our fields provide a public amenity for dog-walkers, cyclists, ramblers and local residents alike and It would virtually eliminate the open centre and consolidate the semi-rural group of settlements into a predominantly urban residential area". This view was endorsed by the Secretary of State in their past decision letter.Our road network was not built to support the existing volume of traffic , we do not have the infrastructure to support development of this scale, our public transport links are very poor with only one bus an hour into Leeds, the only viable means of transportation is by car which will have a cumulative impact on the A650 and A653 which are already congested.

Representation ID: REP00608 Question Ref: H1

1. Character of area. Development on the scale envisaged, particularly when combined with other development sites, does not "respect the character and objectives of local communities" 1670 proposed dwellings in the green sites in Tingley & Ardsley would seriously threaten the semi rural nature of the area. 2. Inadequacy of access roads. Roads linked to the proposed development site are not suitable to take the expected increase in traffic. This could lead to a threat to children's safety especially when children are going to & coming home from the nearby Westerton Primary school when the area already gets very congested. 3. School capacities. The local primary and secondary schools (Westerton, Hill Top, Blackgates and Woodkirk Academy) are already over subscribed and do not have the potential to be extended further. 4. Other community facilities. Doctors, Dentists, health centres & leisure facilities would be overstretched. 5. Building costs. There was extensive mining in the area in the past & old bell pits have already been discovered which need to be dealt with. 6. Agriculture Good quality farmland growing a variety of crops will be lost.

Representation ID: REP00608 Question Ref: H2

Leeds LDF site 3373A. Objections. 1. Character of area. Development on the scale envisaged, particularly when combined with other development sites, does not "respect the character and objectives of local communities" 1670 proposed dwellings in the green sites in Tingley & Ardsley would seriously threaten the semi rural nature of the area. 2. Damage to Haigh Wood. Site includes part of a Tree Preservation Order area. Development of this area will impact on the pretty secluded valley. There will be a threat to a wide variety of wild life present in the valley. 3. Inadequacy of access roads. Roads linked to the proposed development site are not suitable to take the expected increase in traffic. This could lead to a threat to children's safety especially when children are going to & coming home from the nearby Westerton Primary school when the area already gets very congested. 4. School capacities. The local primary and secondary schools (Westerton, Hill Top, Blackgates and Woodkirk Academy) are already over subscribed and do not have the potential to be extended further. 5. Other community facilities. Doctors, Dentists, health centres & leisure facilities in the area would be overstretched. 6. Building costs. Parts of 3373A have serious levels problems and look undevelopable. There was extensive mining in the area in the past & old bell pits have already been discovered which need to be dealt with. 7. Lee Fair fields would be built on. This historic fair would need to be relocated and an alternative site would be needed. 8. Agriculture Good quality farmland growing a variety of crops will be lost. Site 1336. objections The above objections excluding points 2 and 7

Site Reference MAP 33, 3373 A-C. Access problems by increased road traffic to Hill Top Lane/Batley Road. Road safety concerns as access to site is close to primary school and on a bad bend. Access also affected by parked vehicles outside residences directly opposite Hill Top Lane. Ability of local services to cope with extra residents attending local schools and doctors surgeries; personal experience over last six years of just getting a routine doctors appointment has gone from two days to two weeks, due to previous developments in the area. Loss of these areas reduces public access to less formal recreational space and traffic free footpaths. These developments would undoubtedly have an impact on the local wildlife in Haigh Moor Wood. (eg. Bats).

Hill Top Lane is a lane not a wide road and would not be able to take the traffic for another 120 houses, the schools are all over full children are having to travel out of the area. wildlife , bats etc would be affected in the close by woods, walkers would not have the amenity anymore, the doctors surgery cannot handle the patients they have now with sometimes 3 weeks waiting for an appointment, road safety is a major concern as school time is a nightmare on Hill top lane with double parked cars already. Even if another exit on to Haig moor rd were to be made that in itself would cause even more problems as Haig more rd is constantly full of parked cars on both sides and a real hazard to negotiate. we are not talking about a small number of homes which would probably be ok but the amount of homes is far beyond the amount that the area can accomodate, I strongly disagree with any building on this field [x]

The suggestion to develop the area around Haigh Wood in West Ardsley is detrimental to the wood. This is a natural bluebell wood which is rare in this area. Increasing housing in close proximity will destroy the natural habitat. The area around West Ardsley reservoir is a prime example of over use by the local population and as such access will probably have to be closed due to damage. The same thing will happen to the wood as there will be even less greenspace for leisure. Part of the area is also covered by a mediaeval charter to allow Lee Fair to meet on the land yearly.

Name: Jacqueline Squire

Representor No: PRS04321

Representation ID: REP00393 Question Ref: G1

I think it is imperative that the small amount of green space available in this area, particularly site 3373A should be preserved. To even think about the allocation of building for houses on such areas as Haigh Wood is sacrilege when there are adequate brown field sites in Leeds which can be used to build on. The wild animal and plant life in that area is important and to build on a historical site such as where the Lee Fayre is held starts to take all the legacy and history out of the Morley area. This fayre is the largest in England and Leeds/Morley should be proud of this. Have those who are making these decisions had a look at Haigh Wood and really thought about the damage they are doing or is it just a paper exercise.

Representation ID: REP00393 Question Ref: G7

I think Haigh Wood should be kept and developed as a nature area that is made more accessible to the community. The basis is there and would be easy to develop in this way. Other areas could be developed in the same way in other areas of South Leeds. In Aireborough the using of greenspace for development does not seem to be planned as profusely as it has been planned in South Morley. Why is this?

I wish to make reference to the LDP, map 31 site 3373A-C in that I have concerns re access problems by increased traffic; road safety concerns as we are close to the school; the ability of local services to cope in the event of a large influx of people; the loss of identity for the village (which has already had a vast number of additional houses in the last 10/15 years) and damage to wildlife in Haigh Moor Wood, if there is development such as proposed in this Plan.

Representation ID: REP02081 Question Ref: General comment

I wish to make reference to the LDP, map 31 site 3373A-C in that I have concerns re access problems by increased traffic; road safety concerns as we are close to the school; the ability of local services to cope in the event of a large influx of people; the loss of identity for the village (which has already had a vast number of additional houses in the last 10/15 years) and damage to wildlife in Haigh Moor Wood, if there is development such as proposed in this Plan.

Representation ID: REP02081 Question Ref: G7

I suggest that the area quoted in map 31, site 3373A-C should retain its current standing and provide a benefit to the community and some agricultural land in the same basis as is now available.

Name: Michael Bramley

Representor No: PRS04350

Representation ID: REP01455 Question Ref: H1

The areas 3373c & 3373a are not suitable for housing the area contains a large amount of bat colonies and the area is regarded by locals a a natural beauty spot with woods and fields that are a pleasure to share with the community. There are no services in West Ardsley to support a larger community, the junior school is not large enough, there is no shop and one postbox in the village even the village shop converted into flats 5 years ago. Batley Road, the road servicing West Ardsley already is used as a rat run between Dewsbury, Batley and Wakefield and nothing has been done to calm traffic and more housing would add to this. Additionally, road access to the areas would appear to be via the road Hill Top Lane. This road is not really designed or suitable as a major road artery. Hill Top Lane is regularly congested during start of school and end of school day as it is used as drop-off zone by parents, as the previously described Batley Road is too busy. This congestion is despite the local school having a car park and drop off area. Additional housing in the area will add to the congestion - both to the community and the ability for the local school to accommodate the additional child population.

Representation ID: REP01455 Question Ref: H5

As previously described 3373a & 3373c

Representation ID: REP01455 Question Ref: H2

We strongly disagree with the green belt of 3373c and 3373a being considered for housing because it will effect the natural beauty of this area, a main reason we moved here from Tingley which was allowed to over develop. We have observed the impact of overdevelopment where a large number of residential homes has a small amount of services (shops etc.) Our previous observations highlighted that in singular retail area, particularly at dusk, gets utilised by the local youngsters as a hang out as there is no where else to go - and resulting in a number of threatening and anti-social behaviour. The local area is used heavily by families as an area for taking walks - simply due to the fact that this is the ONLY safe area without using transport in the immediate district. Equally, 3373A hosts a long standing traditional event (100s years) called the the LeeFair horse show. From our own person perspective - our property overlooks 3373C and this vista presents a value-add to our property. Our property is situated on Hill Top Lane. The proposed development will have a double impact on reducing the value of our property - Hill Top Lane will become a main road rather than a quiet cul-de-sac. And the Vista our property currently enjoys will be taken away and enjoyed by the new development - this impact could be many thousands of pounds in value loss

Name: Alison Brice

Representor No: PRS04365

Representation ID: REP00325 Question Ref: H11

3373a and c -long term -preferable never

Representation ID: REP00325 Question Ref: H2

Sites: 3373a and 3373c (agree 3373b should be red) Also query 536. With sites 3373a and c I am concerned about the access - if Hill Top Lane is used the road isn't wide and the junction with Batley Road has long been a concern. Cars park directly opposite the junction (terraced houses no drives) and on both sides of Hill Top Lane - especially of concern is school pick up and drop off parking - I am surprised there hasn't been a serious accident with children from Hill Top School and speed is also a concern. If more traffic on the road accessing or cutting through the risk is so much greater. The houses were built with covenants against hedges etc to preserve sight lines.

Representor No: PRS04583

Representation ID: REP00646 Question Ref: H1

1. Local character and identityDevelopment of site would be contrary to the following sections of the Council's policy SP1 in the Core Strategy: - Site 3373A, with its estimated capacity of 130 dwellings, does not have regard to the size, function and sustainability of West Ardsley.SP1 (iii) states: "For development to respect and enhance the local character and identity of places and neighbourhoods". The local character and identity of West Ardsley would be seriously threatened by 3373A, especially when combined with sites 3373C and 1336, and would make its component areas of Upper Green, Haigh Moor and Hill Top barely distinguishable from each other.My view accords with three decision letters from the Planning Inspectorate which were used in the Council's own evidence to the Unitary Development Plan public inquiry in 1995. In paragraph 39 of his report on Morley Local Plan, the inspector considered the planned development at Haigh Wood (site WA2H) would have a "very serious impact upon the character and environment of West Ardsley". He concluded paragraph 10: "In the past, development in the Morley area would appear to have been sporadic and opportunist, placing smaller settlements at risk and tending towards the creation of amorphous sprawl of development across the area along the length of the A650 Bradford to Wakefield road. In my view, the further diffusion of the existing loosely-knit settlement pattern should, as far as possible, be resisted."Considering appeals in 1986 on 81/23/00212 and 81/23/00213 (broadly the same area as LDF sites 3373A/B/C and 1336) the inspector said "It would virtually eliminate the open centre and consolidate the semi-rural group of settlements into a predominantly urban residential area". This was endorsed in the Secretary of State's decision letter.In 1994, a third inspector dismissed an appeal to develop land at Arthington Close near the the edge of Haigh Wood because it would "unacceptably erode the fringe of this rural area and lead to pressure for further encroachment of residential development, particularly in the fields to the west...".Although some years ago these decisions, the character and environment of the area are still semi-rural and just as delicate. When cogent arguments have been repeatedly made against development of the 3373 areas by the Secretary of State, by three planning inspectors and by Leeds Council itself (in evidence to the UDP inquiry), there can be no justification for sites 3373A, 3373C and 1336 being pursued for residential development in the LDF. They should instead be reclassified as "red" and withdrawn from consideration for development when producing the next stage of the plan.2.Damage to Haigh Wood and Baghill beck valley - Development of this site would be contrary to the Council's policy P12 in the Core Strategy:

Representation ID: REP00646 Question Ref: H2

I DISAGREE WITH SITES 3373A, 3373C and 1336 3. FairnessThe Core Strategy seeks to be "fair". The word is used in paragraph 1.2 and again in 1.14. Yet the proposed green housing sites when taken together would definitely not be fair to West Ardsley and Tingley. No justification has been given as to why there is such a concentration here, nor any evidence of local need. Indeed, paragraph 4.6.14 states that "The SHMA 2011 was not able to identify any geographically specific need for new housing based on population growth." The sites seem to have been assessed individually rather than their cumulative impact. This impact is potentially greater when considered alongside Kirklees proposals for Chidswell 4. Highway access - The Upper Green culs-de-sac are not suitable to serve up to 130 more houses. They would become much less safe for children to play in and already severe dangers at school times would be exacerbated.5. Schools - already full and difficult to expand further.6. Agricultural- land good quality agricultural land would be lost.7. Viability - costs from: a. parts of 3373A have serious levels problems and look undevelopable; b. bell pits known to exist in the area from former mining; c. elimination of Japanese Knotweed.

Representation ID: REP01649 Question Ref: H2

3373 a-c. Particularly site C at the top of hill top lane, through which access would be fed. This leads off Batley road which is very dangerous already, especially during school start and finish times when traffic is increased. The addition of 144houses, mininum 2 cars per house, would be hugely detrimental to road safety and heighten risk. In addition capacity of local amenities such as schools to cope is questionable. There has been considerable building of housing in recent years, and still continuing, but no increase in capacity of amenities. Site A has comments regarding wildlife in Haigh wood, and these comments should also apply to site C, particularly bats which fly regularly across site c.

Representation ID: REP01188 Question Ref: H1

Land to the west of the Hill Tops is not suitable for development.There is no sensible access, local roads and amenities (like schools and doctors) cannot cope with the needs of additional residents and, most importantly, the area is a well used local green space and amenity which should not be developed.

Site at the end of Hill Top Lane WF3 should not be developed further.

Representation ID: REP00929 Question Ref: H2

Field at the top of Hill Top Lane WF3. The village of West Ardsley has had too many new houses built in the recent years. The field at the end of hill top lane has woods which is a nature reserve, there would be an adverse effect on the wildlife. The roads around here are not adequate for more traffic. West Ardsley is a village which is fast disappearing and merging into Tingley.

Site 3373A objection. The local character and identity of West Ardsley would be seriously threatened by 3373A, especially when combined with sites 3373C and 1336, and would make its component areas of Upper Green, Haigh Moor and Hill Top barely distinguishable from each other. My view accords with three decision letters from the Planning Inspectorate which were used in the Council's own evidence to the Unitary Development Plan public inquiry in 1995. In paragraph 39 of his report on the Morley Local Plan, the inspector considered that the planned development at Haigh Wood (site WA2H) would have a "very serious impact upon the character and environment of West Ardsley". "In the past, development in the Morley area would appear to have been sporadic and opportunist, placing the identity of the smaller settlements at risk and tending towards the creation of amorphous sprawl of development across the area along the length of the A650 Bradford to Wakefield road. In my view, the further diffusion of the existing loosely-knit settlement pattern should, as far as possible, be resisted." In 1994, another inspector dismissed an appeal to develop land at Arthington Close near the edge of Haigh Wood because it would "unacceptably erode the fringe of this rural area and would lead to pressure for further encroachment of residential development, most particularly in the fields to the west...".

Representation ID: REP00878 Question Ref: G7

The secluded Haigh Wood valley comprises the central portion of site 3373A, including part of the wood covered by a Tree Preservation Order. Residential development would prejudice the objectives underlining this policy as set out in paragraphs 5.3.46 to 5.3.48 of the Core Strategy including: "The Council seeks to protect and enhance the varied landscapes of Leeds and the assets they contain, from valued local trees, the countryside to nationally designated landscape, fauna and flora". This site includes Haigh Wood and Baghill Beck Local Nature Area which fall under UK Biological Action Plan priority habitats - a mixture of woodland, scrub and grassland habitats alongside Baghill Beck. There are a number of wide hedgerow/woodland belts throughout the site that provide a valuable habitat. Water vole has been recorded on the Hey Beck. The Baghill Beck flows into this water course and could support this species. Bats to consider. "The Core Strategy seeks to be "fair". The word is used in paragraph 1.2 and again in 1.14. Yet the proposed green housing sites when taken together would definitely not be fair to West Ardsley and Tingley. No justification has been given as to why there is such a concentration here, nor any evidence of local need. Indeed, paragraph 4.6.14 states that "The SHMA 2011 was not able to identify any geographically specific need for new housing based on population growth." Representation ID: REP05653 Question Ref: H1

Site 3373A. Objections

1. Local character and identity

Development of this site would be contrary to the following sections of the Council's policy SP1 in the Core Strategy:

1. SP1 (i) states: "Smaller Settlements will contribute to development needs, with the scale of growth having regard to the settlement's size, function and sustainability."

Site 3373A, with its estimated capacity of 130 dwellings, does not have regard to the size, function and sustainability of West Ardsley.

SP1 (iii) states: "For development to respect and enhance the local character and identity of places and neighbourhoods". The local character and identity of West Ardsley would be seriously threatened by 3373A, especially when combined with sites 3373C and 1336, and would make its component areas of Upper Green, Haigh Moor and Hill Top barely distinguishable from each other.

My view accords with three decision letters from the Planning Inspectorate which were used in the Council's own evidence to the Unitary Development Plan public inquiry in 1995. In paragraph 39 of his report on the Morley Local Plan, the inspector considered that the planned development at Haigh Wood (site WA2H) would have a "very serious impact upon the character and environment of West Ardsley". He concluded in paragraph 10: "In the past, development in the Morley area would appear to have been sporadic and opportunist, placing the identity of the smaller settlements at risk and tending towards the creation of amorphous sprawl of development across the area along the length of the A650 Bradford to Wakefield road. In my view, the further diffusion of the existing loosely-knit settlement pattern should, as far as possible, be resisted." Considering appeals in 1986 on 81/23/00212 and 81/23/00213 (broadly the same area as LDF sites 3373A/B/C and 1336) the inspector said "It would virtually eliminate the open centre and consolidate the semi-rural group of settlements into a predominantly urban residential area". This was endorsed in the Secretary of State's decision letter.

In 1994, a third inspector dismissed an appeal to develop land at Arthington Close near the the edge of Haigh Wood because it would "unacceptably erode the fringe of this rural area and would lead to pressure for further encroachment of residential development, most particularly in the fields to the west...".

Although some years have passed since these decisions, the character and environment of the area are still semi-rural and just as delicate. When cogent arguments have been repeatedly made against development of the 3373 areas by the Secretary of State, by three planning inspectors and by Leeds Council itself (in evidence to the UDP inquiry), there can be no justification for sites 3373A, 3373C and 1336 being pursued for residential development in the LDF. They should instead be reclassified as "red" and withdrawn from consideration for development when producing the next stage of the plan.

2. Damage to Haigh Wood and Baghill beck valley

Development of this site would be contrary to the Council's policy P12 in the Core Strategy:

"The character, quality and biodiversity of Leeds' townscapes and landscapes, including their historical and cultural significance, will be conserved and enhanced to protect their distinctiveness through stewardship and the planning process." The secluded Haigh Wood valley comprises the central portion of site 3373A, including part of the wood covered by a Tree Preservation Order. Residential development would prejudice the objectives underlining this policy as set out in paragraphs 5.3.46 to 5.3.48 of the Core Strategy including: "The Council seeks to protect and enhance the varied landscapes of Leeds and the assets they contain, from valued local trees, the countryside to nationally designated landscape, fauna and flora".

This view was endorsed by three planning inspectors and again in the Council's evidence, given by Mr G B Andrews, at the UDP inquiry. In his paragraph 4.3.6, Mr Andrews stated: I refer to the conclusions reached by the inspectors at the two subsequent appeal cases in 1985 and 1994. In each case it is acknowledged that the Haigh Wood area is of value as an area of attractive open farmland with a rural character and provides an important amenity in the local area". Even the Council's own assessment for the LDF states that the site is: "Not supported (RED). This site includes Haigh Wood and Baghill Beck Local Nature Area which fall under UK Biological Action Plan priority habitats - a mixture of woodland, scrub and grassland habitats alongside Baghill Beck. There are a number of wide hedgerow/woodland belts throughout the site that provide a valuable habitat. Water vole has been recorded on the Hey Beck. The Baghill Beck flows into this water course and could support this species. Bats to consider."

3. Fairness

The Core Strategy seeks to be "fair". The word is used in paragraph 1.2 and again in 1.14. Yet the proposed green housing sites when taken together would definitely not be fair to West Ardsley and Tingley. No justification has been given as to why there is such a concentration here, nor any evidence of local need. Indeed, paragraph 4.6.14 states that "The SHMA 2011 was not able to identify any geographically specific need for new housing based on population growth." The sites seem to have been assessed individually rather than their cumulative impact. This impact is potentially very much greater when considered alongside Kirklees Council's proposals for the Chidswell area.

4. Highway access

The Upper Green culs-de-sac are not suitable to serve up to 130 more houses. They would become much less safe for children to play in and the already severe dangers at school times would be exacerbated.

5. Schools

Primary and secondary schools already full and difficult to expand further.

6. Agricultural land

Good quality agricultural land would be lost.

7. Viability

Extra costs from: a. parts of 3373A have serious levels problems and look undevelopable; b. bell pits known to exist in the area from former mining; c. elimination of Japanese Knotweed.

Representor No: PRS05109

Representation ID: REP05689 Question Ref: H1

Please note my objections to the proposed developments below.

The proposal for site 3373A (This is the site that runs from the top of

Baghill around the back of Arthington Close and Upper Green and will finish

on Westerton Road opposite Lonsdale Rise) is to build 130 houses. Lee gap

Fair is held twice a year in these fields, the fair is the oldest horse fair

in England dating back to 1136 and forms part of the history and heritage of

the area.

The 3373C site which will run from the top of Hilltop Lane and carve up all

the fields from there to Nook Green on Haigh Moor Road is for 144 houses. It

can be argued that the highways infrastructure for Site 3373B is inadequate,

there are Highways concerns re poor accessibility for the number of houses

proposed and then there is the issue of Highways safety with the junction of

Hilltop Lane being within 100 metres of the primary school. All the issues

on the attached letter are also relevant for site 3373C.

The site on Westerton Road from Regency Gardens to Westerton Wood if

developed will see 117 new homes - this land is currently classed as green

belt (site 3365 = 83 homes and site 1258 = 34 homes)

development here will

represent a major incursion into the Green belt and will create further

pressure on Ardsley reservoir as a local beauty spot.

Development of sites

3365 and 1258 will result in the loss of valuable agricultural land, there

are a number of wide hedgerow and woodland belts throughout the site that

provide a valuable habitat for wildlife in particular bats.

Development of

the sites on Westerton Road will result in the amorphous sprawl of

development across the area along the whole length of the Westerton Road.

Site 1330B is an extension of the building that is currently ongoing

adjacent to Jude's pond - and is for a further 32 houses ! This site has

major highways access issues and has less than the recommended visibility

splay for highways safety - further development of this site will exasperate

current problems regarding drainage on the land - Haigh Moor Road residents

already have to deal with flooding of the pavements and highways in the

vicinity of Jude's pond.

Please note that all these sites are in addition to any planning applications that have already been approved.

464 houses in such a small vicinity is unsustainable, there are currently

just over 300 pupils at Hill Top Primary School with no room for any

expansion, the school is full and the same is true of Westerton which as you

know was a small village school 20 years ago but is now one of the biggest

primary schools in the Leeds district and all because of the amount of

building that has taken place over recent years.

Leeds City Council have in their allocation plan confirmed that Ardsley and Robin Hood have a deficiency in parks and gardens (the only area in Leeds South West to be deficient) - our children already have very little designated play areas, they have also confirmed that we are deficient in outdoor sports areas and facilities for children to play. We have however got a surplus of natural green space which is currently under threat of housing - if this natural greenspace is to be used for any purpose, surely it should be used to reduce the deficit and improve our community. Further reduction of amenity greenspace in an area which is seeing more and more housing development is unfair and unsustainable. Our GP surgeries are at breaking point with current waiting times for appointments being in excess of two weeks, the surgery at Leigh View was recently extended and it's difficult to envisage how this could be extended further to serve the population boom that will ensue if all these sites are developed. Further erosion of the demarcation between West Ardsley & Tingley - soon the two settlements will merge into one and West Ardsley as a separate community will be subsumed into its near neighbour, the two areas will be barely distinguishable from each other which is contrary to the Councils policy SP1 which clearly states smaller Settlements will contribute to development needs, with the scale of growth having regard to the settlement's size, function and sustainability. If these plans were approved it will no doubt result in urban sprawl with no identifiable boundaries. Our fields provide a public amenity for dog-walkers, cyclists, ramblers and local residents alike and It would virtually eliminate the open centre and consolidate the semi-rural group of settlements into a predominantly urban residential area". This view was endorsed by the Secretary of State in their past decision letter. Our road network was not built to support the existing volume of traffic , we do not have the infrastructure to support development of this scale, our public transport links are very poor with only one bus an hour into Leeds, the only viable means of transportation is by car which will have a cumulative impact on the A650 and A653 which are already congested. I look forward to your response and confirmation that these developments will not go ahead

Hi,

I would like to object against the planning proposals for the following sites on Map 33 (off Westerton Road)

1336

3373B

3373A

1330B

33732

3365

3373C

3456A

3456B

1258

I suggest that these should all be changed to RED due to the following reasons:

Too much traffic already so roads will be extremely busy right outside my front door. I have young children and will be scared for their safety.

Services such as Doctors surgery's, dentists, local hospitals, schools, supermarkets already too busy so won't be able to cope

Less water will be absorbed into the ground resulting in more flooding in our gardens.

This is currently already happening in several houses on Westerton Road including mine.

There are bats, foxes, owls, frogs, newts and many birds living in the area especially on sites 1336, 3373A, 3373B, 3373C. Should these not be protected?

House prices for homeowners in the area already will decrease.

We moved to the area because of the greenery and our view will be spoilt.

The sewerage system in place on Westerton Road recently failed causing waste from the sewers to overflow into nearby houses. This was due to the recent housing developments that have recently been built nearby so the sewerage system was unable to cope. This could very likely happen again.

1258

The infrastructure in this area will struggle to cope with the demands of the services required.

The area is attracting wildlife not seen in built up areas. It seems a shame to disregard the wildlife issue I'm sure if a full environmental survey of the area was to be carried out this would scupper the planning permission. But again that would be an extra cost to the council which would have an impact at year end when the books are balanced.

Representation ID: REP05748 Question Ref: H1

I wish to object to the above sites on the following basis

Site 3373A and 3373C Objections

1. Local character and identity

Development of these sites would be contrary to the following

sections of the Council's policy SP1 in the Core Strategy:

1. SP1 (i) states: "Smaller Settlements will contribute to development needs, with the scale of growth having regard to the settlement's size, function and sustainability."

Sites 3373A and 3373C with their estimated capacity of 277 dwellings, does not have regard to the size, function and sustainability of West Ardsley.

SP1 (iii) states: "For development to respect and enhance the local character and identity of places and neighbourhoods". The local character and identity of West Ardsley would be seriously threatened especially when combined with sites 3373A, 3373C and 1336, and would make its component areas of Upper Green, Haigh Moor and Hill Top barely distinguishable from each other.

My view accords with three decision letters from the Planning Inspectorate which were used in the Council's own evidence to the Unitary Development Plan public inquiry in 1995. In paragraph 39 of his report on the Morley Local Plan, the inspector considered that the planned development at Haigh Wood (site WA2H) would have a "very serious impact upon the character and environment of West Ardsley". He concluded in paragraph 10: "In the past, development in the Morley area would appear to have been sporadic and opportunistic, placing the identity of the smaller settlements at risk and tending towards the creation of amorphous sprawl of development across the area along the length of the A650 Bradford to Wakefield road. In my view, the further diffusion of the existing loosely-knit settlement pattern should, as far as possible, be resisted."

Considering appeals in 1986 on 81/23/00212 and 81/23/00213 (broadly the same area as LDF sites 3373A/B/C and 1336) the inspector said "It would virtually eliminate the open centre and consolidate the semi-rural group of settlements into a predominantly urban residential area". This was endorsed in the Secretary of State's decision letter.

In 1994, a third inspector dismissed an appeal to develop land at Arthington Close near the edge of Haigh Wood because it would "unacceptably erode the fringe of this rural area and would lead to pressure for further encroachment of residential development, most particularly in the fields to the west."

Although some years have passed since these decisions, the character and environment of the area are still semi-rural and just as delicate. When cogent arguments have been repeatedly made against development of the 3373 areas by the Secretary of State, by three planning inspectors and by Leeds Council itself (in evidence to the UDP inquiry), there can be no justification for sites 3373A, 3373C and 1336 being pursued for residential development in the LDF. They should instead be reclassified as "red" and withdrawn from consideration for development when producing the next stage of the plan.

2. Damage to Haigh Wood and Baghill beck valley

Development of this site would be contrary to the Council's policy

P12 in the Core Strategy:

"The character, quality and biodiversity of Leeds' townscapes and landscapes, including their historical and cultural significance, will be conserved and enhanced to protect their distinctiveness through stewardship and the planning process." The secluded Haigh Wood valley comprises the central portion of site 3373A, including part of the wood covered by a Tree Preservation Order. Residential development would prejudice the objectives underlining this policy as set out in paragraphs 5.3.46 to 5.3.48 of the Core Strategy including: "The Council seeks to protect and enhance the varied landscapes of Leeds and the assets they contain, from valued local trees, the countryside to nationally designated landscape, fauna and flora". This view was endorsed by three planning inspectors and again in the Council's evidence, given by Mr G B Andrews, at the UDP inquiry. In his paragraph 4.3.6, Mr Andrews stated: I refer to the conclusions reached by the inspectors at the two subsequent appeal cases in 1985 and 1994. In each case it is acknowledged that the Haigh Wood area is of value as an area of attractive open farmland with a rural character and provides an important amenity in the local area". Even the Council's own assessment for the LDF states that the site is: "Not supported (RED). This site includes Haigh Wood and Baghill Beck Local Nature Area which fall under UK Biological Action Plan priority habitats - a mixture of woodland, scrub and grassland habitats alongside Baghill Beck. There are a number of wide hedgerow/woodland belts

Representor No: PRS05165

throughout the site that provide a valuable habitat. Water vole has been recorded on the Hey Beck. The Baghill Beck flows into this water course and could support this species. Bats to consider."

3. Fairness

The Core Strategy seeks to be "fair". The word is used in paragraph 1.2 and again in 1.14. Yet the proposed green housing sites when taken together would definitely not be fair to West Ardsley and Tingley. No justification has been given as to why there is such a concentration here, nor any evidence of local need. Indeed, paragraph 4.6.14 states that "The SHMA 2011 was not able to identify any geographically specific need for new housing based on population growth." The sites seem to have been assessed individually rather than their cumulative impact. This impact is potentially very much greater when considered alongside Kirklees Council's proposals for the Chidswell area.

4. Highway access

The Upper Green culs-de-sac and Hill Top Lane cul-de-sacs are not suitable to serve up to 274 more houses. They would become much less safe for children to play in and the already severe dangers at school times would be exacerbated. Both cul-de-sacs are within 100 metres of primary schools

5. Schools

Primary and secondary schools already full and difficult to expand further.

6. Agricultural land

Good quality agricultural land would be lost.

7. Viability

Extra costs from: a. parts of 3373A have serious levels problems and look undevelopable; b. bell pits known to exist in the area from former mining; c. elimination of Japanese Knotweed.

OTHER POINTS TO BE RAISED

Site 3373A Lee gap Fair is held twice a year in these fields, the fair is the oldest horse fair in England dating back to 1136 and forms part of the history and heritage of the area.

The 3373C site the highways infrastructure for Site 3373C is inadequate, there are Highways concerns re poor accessibility for the number of houses proposed and then there is the issue of Highways safety with the junction of Hilltop Lane being within 100 metres of the primary school

The site on Westerton Road from Regency Gardens to Westerton Wood this land is currently classed as green belt (site 3365 = 83 homes and site 1258 = 34 homes) development here will represent a major incursion into the Green belt and will create further pressure on Ardsley reservoir as a local beauty spot. Development of sites 3365 and 1258 will result in the loss of valuable agricultural land, there are a number of wide hedgerow and woodland belts throughout the site that provide a valuable habitat for wildlife in particular bats. Development of the sites on Westerton Road will result in the amorphous sprawl of development across the area along the whole length of the Westerton Road.

Site 1330B is an extension of the building that is currently ongoing adjacent to Jude's pond - and is for a further 32 houses ! This site has major highways access issues and has less than the recommended visibility splay for highways safety - further development of this site will exasperate current problems regarding drainage on the land - Haigh Moor Road residents already have to deal with flooding of the pavements and highways in the vicinity of Jude's pond.

464 houses in such a small vicinity is unsustainable, there are currently just over 300 pupils at Hill Top Primary School with no room for any expansion, the school is full and the same is true of Westerton which as you know was a small village school 20 years ago but is now one of the biggest primary schools in the Leeds district and all because of the amount of building that has taken place over recent years.

Leeds City Council have in their allocation plan confirmed that Ardsley and Robin Hood have a deficiency in parks and gardens (the only area in Leeds South West to be deficient) - our children already have very little designated play areas, they have also confirmed that we are deficient in outdoor sports areas and facilities for children to play. developed.

Further erosion of the demarcation between West Ardsley & Tingley - soon the two settlements will merge into one and West Ardsley as a separate community will be subsumed into its near neighbour, the two areas will be barely distinguishable from each other which is contrary to the Councils policy SP1 which clearly states smaller Settlements will contribute to development needs, with the scale of growth having regard to the settlement's size, function and sustainability. If these plans were approved it will no doubt result in urban sprawl with no identifiable boundaries.

Our fields provide a public amenity for dog-walkers, cyclists, ramblers and local residents alike and It would virtually eliminate the open centre and consolidate the semi-rural group of settlements into a predominantly urban residential area". This view was endorsed by the Secretary of State in their past decision letter.

Our road network was not built to support the existing volume of traffic , we do not have the infrastructure to support development of this scale, our public transport links are very poor with only one bus an hour into Leeds, the only viable means of transportation is by car which will have a cumulative impact on the A650 and A653 which are already congested

Representation ID: REP05759 Question Ref: H1

I wish to object to 3373A, 3373B & 3373C.

[x]

I wish to object on the following grounds:

. The Haigh Wood site reference is 3373, and it is split into 3 parts:

. 3373A is land between Westerton Road & Haigh Wood. This has been assessed as suitable for residential development, with a capacity of 130 houses.

. 3373B is Haigh Wood itself. This has been assessed as unsuitable for residential development because of the topography of the site and access

. 3373C is the fields between Haigh Wood & Woollin Crescent, linking right round to Nook Farm.

The proposal for site 3373A (This is the site that runs from the top of Baghill around the back of Arthington Close and Upper Green and will finish on Westerton Road opposite Lonsdale Rise) is to build 130 houses. Lee gap Fair is held twice a year in these fields, the fair is the oldest horse fair in England dating back to 1136 and forms part of the history and heritage of the area.

The 3373C site which will run from the top of Hilltop Lane and carve up all the fields from there to Nook Green on Haigh Moor Road is for 144 houses. It can be argued that the highways infrastructure for Site 3373B is inadequate, there are Highways concerns re poor accessibility for the number of houses proposed and then there is the issue of Highways safety with the junction of Hilltop Lane being within 100 metres of the primary school. All the issues on the attached letter are also relevant for site 3373C.

The site on Westerton Road from Regency Gardens to Westerton Wood if developed will see 117 new homes - this land is currently classed as green belt (site 3365 = 83 homes and site 1258 = 34 homes) development here will represent a major incursion into the Green belt and will create further pressure on Ardsley reservoir as a local beauty spot. Development of sites 3365 and 1258 will result in the loss of valuable agricultural land, there are a number of wide hedgerow and woodland belts throughout the site that provide a valuable habitat for wildlife in particular bats. Development of the sites on Westerton Road will result in the amorphous sprawl of development across the area along the whole length of the Westerton Road. Site 1330B is an extension of the building that is currently ongoing adjacent to Jude's pond - and is for a further 32 houses ! This site has major highways access issues and has less than the recommended visibility splay for highways safety - further development of this site will exasperate current problems regarding drainage on the land - Haigh Moor Road residents already have to deal with flooding of the pavements and highways in the vicinity of Jude's pond.

Please note that all these sites are in addition to any planning applications that have already been approved.

464 houses in such a small vicinity is unsustainable, there are currently just over 300 pupils at Hill Top Primary School with no room for any expansion, the school is full and the same is true of Westerton which as you know was a small village school 20 years ago but is now one of the biggest primary schools in the Leeds district and all because of the amount of building that has taken place over recent years.

Leeds City Council have in their allocation plan confirmed that Ardsley and Robin Hood have a deficiency in parks and gardens (the only area in Leeds South West to be deficient) - our children already have very little designated play areas, they have also confirmed that we are deficient in outdoor sports areas and facilities for children to play. We have however got a surplus of natural green space which is currently under threat of housing - if this natural greenspace is to be used for any purpose, surely it should be used to reduce the deficit and improve our community. Further reduction of amenity greenspace in an area which is seeing more and more housing development is unfair and unsustainable.

Our GP surgeries are at breaking point with current waiting times for appointments being in excess of two weeks, the surgery at Leigh View was recently extended and it's difficult to envisage how this could be extended further to serve the population boom that will ensue if all these sites are developed.

Further erosion of the demarcation between West Ardsley & Tingley - soon the two settlements will merge into one and West Ardsley as a separate community will be subsumed into its near neighbour, the two areas will be barely distinguishable from each other which is contrary to the Councils policy SP1 which clearly states smaller Settlements will contribute to development needs, with the scale of growth having regard to the settlement's size, function and sustainability. If these plans were approved it will no doubt

3373a - Suggested change GREEN to RED

Reason for change - Very narrow strip of land further development would completely the whole natural appearance and attraction views of the wood. Development on scale envisaged particularly when combined with other sites does not respect character and objectives of the local community.

Other remarks - Further house buildings would also increase traffic problems on Westerton Road at school times. We already have major difficulties in getting in and out of their homes with vehicles parked up on both sides of Upper Green Avenue and Way Drive. Restricting views of oncoming traffic both ways on Westerton Road.3373a - Suggested change GREEN to RED

3373A and C either side of Haigh Wood – 274houses across these sites are unsustainable. There is a significant lack of school places. Both Hilltop and Westerton Primary are full. Hilltop is a tightly constrained PFI site and it is hard to see how it could be expanded. Westerton is already 3 form entry. Public transport links are terrible. For those reliant on public transport it is a two hour round trip to the GPs on Bradford Road. Open views across Haigh Wood would inevitably be damaged (a feature that a previous planning inspector was keen to maintain. Access to site 3373C would be potentially dangerous exiting on to Batley Road at the brow of the hill near Hilltop Primary. These Green Belt sites should be re-designated Red.

Representation ID: REP06563 Question Ref: H1

Suggested sites from Green to Red;

1029
1072
1143B
1143D
1200A
1258
1344
3365
3373A
3373C
3456A

All of the above sites are in the current Green Belt with the exception of the 3373A and 3373C which are open land.

The other sites are all located within the existing Green Belt and any development would lead to increased urban sprawl between the various townships in the Outer South West, and lead to coalescence between communities.

Development of the Green Belt sites would also reduce the open green area between settlements and create encroachment into the countryside around Morley.

In addition there is insufficient road capacity in the area particularly the very busy single carriageway A650 from East Ardsley to Tingley. Even if there is no development of the above sites there is in the allocation plan over 1,200 additional new houses close to the A650 which will put additional strain on this busy road.

The Haigh Moor sites are part of a natural valley which is popular for recreational activities. The whole site is considered best treated as one, therefore if the largest part 3373B is not to be used for housing then the other parts of the site should be treated in a similar manner. This should be retained as open green space.

Site 1072 is in the Green Belt and although there are properties adjacent it is located near to the A653 and shares similar characteristics to site 3078B which is not considered suitable for development. A development at this site would set a precedent for incursion into the Green Belt between Leeds and Kirklees.

See rep for full details.

Sites 3373A & 3373C, Green to Red (assumed)

I believe the areas in question are the only green areas left in the area for children to play, people to walk their dogs etc, Tingley is already overcrowded with schools so much so that local children are having to travel to schools further away. This is the last of the green belt area left in tingley/ardsley. We already have too much traffic for such a built up area.

Name: Karen Renshaw

Representor No: PRS06048

Representation ID: REP06876 Question Ref: H1

3373A & 3373C Haigh Wood, West Ardsley – total of 274 properties. This is unacceptable and the area could not facilitate and/or accommodate this number of properties.. Local children have no places within their schools already and its also a 2 hour journey to access the Dr's surgery for these local residents. The bus and transport service is inadequate and would need to be addressed as well as roads not created to take the amount of traffic which would be using the highways, endangering local residents and young people on school journeys. This area would lose its character and identity by developments merging different localities into one blur – villages and area gone forever.

Many of the reasons for opposing all these sites identified are based on the lack of infrastructure, schools & education, transport, safety, health & well-being, Gp's surgeries, poor links with public transport, noise, pollution and busy highways created by the increased volume of traffic. Please take all these serious matters into account and I would appreciate a briefing before any further decisions are made.

Allocations Issues and Options Document- Sites 536 (Nook Farm) , 1330 B (Adjacent to Judes Pond), 1336 (Westerton Road, and 3373 A, Band C (Haigh Wood)

We act on behalf of the West Ardsley Consortium that has made formal comments to the Leeds Site Allocations Issues and Options documents. We enclose a copy of the Document submitted with the formal response for your information.

Our clients are interested in sites 536 (Nook Farm) , 1330 8 (Adjacent to Judes Pond), 1336 (Westerton Road, and 3373 A, 8 and C (Haigh Wood) and have previously made representations for the sites to be allocated, along with a substantial area of ecologically maintained open space centred around the Haigh Wood area.

Having seen the draft proposals our clients are supportive in principle of the Councils approach to identifying a large portion of the land promoted by them for residential development. The areas identified as "Green" (for development) in the Issues and Options document at Haigh Wood amount to 16.83 Ha of land with a suggested dwelling capacity of over 400 units (at a reasonably low 25/Ha). The areas identified as "Red" (felt to be not suitable for development) amount to 17.5 Ha. This sets an approach of slightly over half the land being protected from development.

We note that the site known as Nook Farm (536) is an existing UDPR commitment and has no policy designation that has or would suggest anything other than its suitability for residential development. That site also has (contrary to the suggestion in the Issues and Options document) an extant planning permission. The details of this are set out in our formal representations.

I have reviewed the indicative boundaries suggested between the "Green" and "Red" sites in the Issues and Options document and undertaken a detailed assessment against trees, topography, the LNA of Haigh Wood and the stream running through it, whilst acknowledging the need for an uninterrupted green corridor separating the north west and south east areas of land, our clients are firmly of the view that the Councils preliminary work does not produce appropriate boundaries between development allocations and non development allocations. For example as figure 3 in the attached document shows land is identified by the Council for development in site 33 73A that includes part of the LNA, the trees of Haigh Wood and the stream running through it, whilst seeking to protect from development land to the south east which has none of those considerations applying to it.

Utilising the work already done on ecology, trees and hedges, landscape and topography, our Clients have carefully considered the Councils objectives and aspirations from the comments in the tables and proposals associated with the Issues and Options document. They have produced a revised masterplan and from that been able to identify appropriate development and allocation boundaries. These maintain a broad green corridor through the valley, protecting ecological interests, trees and the stream as well as views and the "open feel" of the valley itself. In particular this has not only widened the broad swathe of green between the development areas, compared to the earlier 2012 masterplan, but removed any road connections across the valley.

The resultant masterplan has been informed by all the Consortium team's professional disciplines and the changed highways connections fully evaluated to ensure they work appropriately.

The outcome is that of the area in the UDPR that is identified as N 11 (some 36.14 Ha) only 40% is now proposed for development. The suggested allocations (boundaries shown in red on Figure 6 of the attached document include (so that the allocations are not excessively subdivided) substantial green corridors and strategic planting, amounting to some 3.241ha. These run along the existing and proposed pedestrian and bridleway access corridors to the valley and the Wood. The suggested total area of the allocations (including the 3.24 Ha of undeveloped green space) is under half of the current N 11 land at 17.66 Ha. We believe this provides the right balance of development and protection of the wider site.

We note that the areas identified as "Green" in the Issues and Options document in this Outer South West area are insufficient by some margin (1,432) to meet the Core Strategy suggested proportion of housing for the area, even taking into account (and not questioning) the amount of development to come forward from permissions and existing allocations. There should be no doubt that all "Green" sites should therefore go forward for allocation. Indeed more will need to be found from "Amber" or even "Red" sites to provide sufficient land. In addition, there are proportionately far fewer "Green" sites (compared to "Amber") in East and West Ardsley than there are in Morley or the rest of the Outer South West.

The site at Haigh Wood with its non greenbelt status and accessibility and sustainability credentials provides a very good location for development and the provision of material environmental benefits through protection, increased access and environmental management of the Wood itself. As there have to be exceptional circumstances to take land out of the greenbelt, there must correspondingly be exceptional circumstances not to develop at Haigh Wood ahead of greenbelt land.

For all of these reasons our clients, look forward to working with the Council to bring forward development in line with the attached revised masterplan, which we believe fully addresses all comments made in the Issues and Options document and the related concerns about the land at Haigh Wood.

Representation ID: REP07292 Question Ref: H7

Dear Madam

Allocations Issues and Options Document - Sites 536 (Nook Farm) , 1330 B (Adjacent to Judes Pond), 1336 (Westerton Road, and 3373 A, B and C (Haigh Wood)

We act on behalf of the West Ardsley Consortium that has made formal comments to the Leeds Site Allocations Issues and Options documents. We enclose a copy of the Document submitted with the formal response for your information.

Our clients are interested in sites 536 (Nook Farm) , 1330 B (Adjacent to Judes Pond), 1336 (Westerton Road, and 3373 A, B and C (Haigh Wood) and have previously made representations for the sites to be allocated, along with a substantial area of ecologically maintained open space centred around the Haigh Wood area.

Having seen the draft proposals our clients are supportive in principle of the Councils approach to identifying a large portion of the land promoted by them for residential development. The areas identified as "Green" (for development) in the Issues and Options document at Haigh Wood amount to 16.83 Ha of land with a suggested dwelling capacity of over 400 units (at a reasonably low 25/Ha). The areas identified as "Red" (felt to be not suitable for development) amount to 17.5 Ha. This sets an approach of slightly over half the land being protected from development.

We note that the site known as Nook Farm (536) is an existing UDPR commitment and has no policy designation that has or would suggest anything other than its suitability for residential development. That site also has (contrary to the suggestion in the Issues and Options document) an extant planning permission. The details of this are set out in our formal representations.

Having reviewed the indicative boundaries suggested between the "Green" and "Red" sites in the Issues and Options document and undertaken a detailed assessment against trees, topography, the LNA of Haigh Wood and the stream running through it, whilst acknowledging the need for an uninterrupted green corridor separating the north west and south east areas of land, our clients are firmly of the view that the Councils preliminary work does not produce appropriate boundaries between development allocations and non development allocations. For example as figure 3 in the attached document shows land is identified by the Council for development in site 3373A that includes part of the LNA, the trees of Haigh Wood and the stream running through it, whilst seeking to protect from development land to the south east which has none of those considerations applying to it.

Utilising the work already done on ecology, trees and hedges, landscape and topography, our Clients have carefully considered the Councils objectives and aspirations from the comments in the tables and pro formas associated with the Issues and Options document. They have produced a revised masterplan and from that been able to identify appropriate development and allocation boundaries. These maintain a broad green corridor through the valley, protecting ecological interests, trees and the stream as well as views and the "open feel" of the valley itself. In particular this has not only widened the broad swathe of green between the development areas, compared to the earlier 2012 masterplan, but removed any road connections across the valley.

The resultant masterplan has been informed by all the Consortium team's professional disciplines and the changed highways connections fully evaluated to ensure they work appropriately.

The outcome is that of the area in the UDPR that is identified as NI 1 (some 36.14 Ha) only 40% is now proposed for development. The suggested allocations (boundaries shown in red on Figure 6 of the attached document include (so that the allocations are not excessively subdivided) substantial green corridors and strategic planting, amounting to some 3.24Ha. These run along the existing and proposed pedestrian and bridleway access corridors to the valley and the Wood. The suggested total area of the allocations (including the 3.24 Ha of undeveloped green space) is under half of the current NI1 land at 17.66 Ha. We believe this provides the right balance of development and protection of the wider site.

We note that the areas identified as "Green" in the Issues and Options document in this Outer South West area are insufficient by some margin (1,432) to meet the Core Strategy suggested proportion of housing for the area, even taking into account (and not questioning) the amount of development to come forward from permissions and existing allocations. There should be no doubt that all "Green" sites should therefore go forward for allocation. Indeed more will need to be found from "Amber" or even "Red" sites to provide sufficient land. In addition, there are proportionately far fewer "Green" sites (compared to "Amber") in East and West Ardsley than there are in Morley or the rest of the Outer South West.

The site at Haigh Wood with its non greenbelt status and accessibility and sustainability credentials provides a very good location for development and the provision of material environmental benefits through protection, increased access and environmental management of the Wood itself. As there have to be exceptional circumstances to take land out of the greenbelt, there must correspondingly be exceptional circumstances not to develop at Haigh Wood ahead of greenbelt land.

For all of these reasons our clients, look forward to working with the Council to bring forward development in line with the attached revised masterplan, which we believe fully addresses all comments made in the Issues and Options document and the related proformas about the land at Haigh Wood.

Yours faithfully

[x]

Representation ID: REP07138 Question Ref: H1

No site ref given - assume sites 3373A, B, C

I would like to object to the land at the top of Hill top Lane West Ardsley being allocated for housing, My main concern is the junction coming out of Hill top Lane onto Batley road which already is a hazard, it is a T junction with houses directly facing the end of Hill Top Lane, and the residents park their cars directly in front of their properties. this makes the narrow road even narrower, cars coming up Haybeck lane have a blind corner and some come at terrific speed, there are children crossing at school times and I have witnessed many near misses. Speed cameras, sleeping policemen and SLOW DOWN signs are needed already to prevent the inevitable happening. People Park on Hill Top Lane to drop children off at Hill Top School and Pick up, on both sides of the road, this causes access problems for residents.

The school is only 200 yards from the end of Hill Top Lane. Hill Top School is full to capacity, so unless the buildings are for elderly residents where would the children go to school? Our Local Doctors already have 17,000 patients and are not increasing the number of GP's, I know this as I work within the practice. Children play on Hill top lane on bikes and skate boards, and increased traffic would put a stop to that, it's quiet and safe at present, childrens freedom to play outside their homes in safety has to be considered.

The natural habitat enjoyed by birds, wildlife, walkers, dog walkers and children playing in Haigh Moor woods would be destroyed. The noise, dirt, and heavy plant traffic during development would have a massive affect on residents, especially the elderly who live in the bungalows on the left hand side. who ever has brain stormed this idea wants to come and spend an hour at the bottom of Hill Top lane one school morning and witness the chaos and danger there, we as residents are already inconvenienced greatly by the increased traffic since the School was built.

Representor No: PRS06245

Representation ID: REP07156 Question Ref: H1

The proposed site at 3373A is the site used for the bi-annual gypsy, Roma and traveller horse fair- Lee Gap Fair. This is the oldest horse fair in the country granted under Royal Charter by King Stephen in 1136- so now being in its 877th year. Insufficient consideration has been given to the impact of these proposals on this important part of gypsy, Roma and traveller heritage and it would be completely unacceptable to take away the ability for the travellers from all over the UK and beyond to meet on this land and particularly so when Leeds City Council themselves have taken a keen interest in the fair and the welfare of the travellers who attend.

Representation ID: REP07156 Question Ref: H1

Loss of Greenbelt and Open Spaces.

It is Government policy that greenbelt should be used only in exceptional circumstances. There are no such exceptional circumstances to warrant building on the greenbelt and open areas on the sites above. The areas of Tingley and West Ardsley have already lost too many fields and hedgerows to private developers.

Building on sites 3373A and 3373C would adversely impact upon the openness of the central valley overlooking Baghill, across Haigh Wood and to the open countryside beyond.

The views of Arthington Close and The Upper Greens across the valley would be totally impeded by the proposed building of 130 homes.

The proposals would damage the biodiversity of the area - Haigh Wood is an ancient bluebell woodland with very established trees and hedgerows a beck and wide variety of animal and birdlife. The suggestion (by the Council) that if the proposed buildings went ahead that a green open/play space could be created in the middle of the new estate to allow a green area is frankly ludicrous- to preserve the green areas, the site should simply not be built upon at all.

Also, we believe that insufficient consideration has been given to the analysis of brownfield sites within the wider Leeds city area and particularly the Outer South West areas. Although it is recognised that these sites can be more expensive to develop and may not be in such financially lucrative areas it is the responsibility of the Council to look towards long term regeneration of the city as a whole and work with developers to bring about change. Cherry picking high value areas at the expense of open countryside is morally wrong and as a landowner with significant assets the Council needs to identify alternative sites throughout this area and the city.

There are an estimated 5000 empty houses in the city and we would challenge the Council as to what steps are being taken to bring these back into use. Furthermore, we understand that the Council itself controls significant brownfield assets throughout the city and council is duty bound and morally bound to put these forward for consideration in advance of greenbelt land being used. The proposals for the above numbered sites are financial gain at the expense of the environment and a precedent for further urban sprawl and encroachment of the countryside. The proposals are totally contrary to the greenbelt review methodology

Representation ID: REP07156 Question Ref: H1

ocal Amenities and Infrastructure.

The inclusion of the sites above when combined with the building which has already taken place and those sites where planning permission has already been granted would result in an unacceptable level of over intensification and have a disastrous impact on local GP surgeries and schools in the immediate area. There is only one GP Practice serving the area and it is oversubscribed with waiting time for an appointment currently running at 3 weeks. This is already unacceptable based on the current number of houses in the area. There is one dental practice with no vacancies for new patients and all local schools are oversubscribed with local children already unable to attend their local schools. The addition of more houses would only cause further problems.

Representation ID: REP07156 Question Ref: H1

Highways and Access.

It is likely that the site at 3373A would be accessed via The Upper Greens and although this is a "traditional" estate structure, the roads are comparatively narrow and winding and were not designed to accommodate such high numbers of housing exiting onto Westerton Road.

The existing highway infrastructure is unable to cope with current usage. There is serious congestion particularly around rush hours and school hours. The junction with Westerton Road is poor and directly opposite a primary school and a zebra crossing. Further, the close proximity of Arthington Close (a couple of hundred yards in one direction) and the very busy junction of Hesketh Lane (a couple of hundred yards in the other direction) mean that these are too close, are dangerous and any increase in traffic would compound what is already a very problematic area and would put children at risk.

Also the road and footpaths along Westerton Road are already in a very poor state of repair and not properly maintained by the Council.

Representation ID: REP07983 Question Ref: H1

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Green Sites outside the Core Public Transport Network

Table 1 below contains sites that are classified as 'Sites which have potential to be allocated for housing' but fall outside 400m of the current core bus network. Consideration needs to be given to if these sites would be able to meet the LDF public transport accessibility requirements should housing be brought forward. Significant developer contributions will be required at these sites to improve the public transport to meet the council LDF accessibility policies; particularly in the larger sites should these be brought forward for development. These include SHLAA ref: 2062, 1032, 1046, 1017 & 1055.

Sites which fall marginally outside the 400m catchments and have high bus frequencies or are small sites low capacity are less of concern but are flagged up nonetheless.

The table also includes accessibility assessments results to access other services and facilities within acceptable journey times on public transport.

[see table in full representation submitted which lists sites]

Reason for change from Green to Red - Additional Information — Site 3373A Haighwell Map 33

1. Damage to Haigh Wood, other tress and wildlife.

a. Our property is next to the 3373A site and we have all types of wildlife enter our garden throughout the year from fox's, hedgehogs, squirrels and fogs but the most regular of all are the Bats which during the spring and summer months can be seen circling the trees between site 3373A and our garden. The number of Bats which can be seen seem to vary but they can be seen most nights throughout the summer from about 22:00hrs which is I when my wife and I tend to sit and watch them. The regularity of these Bats together with the close proximity in which they circle would suggest that the roost would most probably be within the 3373A site. As I'm sure you will be fully aware making planning decisions without the due consideration of priority species is contrary to the Natural Environment and Rural Communities (NERC) Act 2006 which applies to all public organisations, including local authorities. S.40 of the Act states "Every public authority must, in exercising its functions, have regard, so far as is consistent with the proper exercise of those functions, to the purpose of conserving biodiversity." Under s.41 of the Act, bats are listed by Defra as a priority species for the conservation of biodiversity.

b. The site itself includes part of a Tree Preservation Order area.

c. With development of the 3373A & 1336 sites would mean the complete enclosure of the already mainly secluded valley and would therefore suggest that LDF actually changes the area by extending the area of protection.

2. Agriculture

a. Site 3373A is currently used as agriculture and therefore I would question why it is not a viable option for this to be maintained.

3. Inadequacy of access roads.

a. Access to the site would have to be either on to the main Westerton Road via site 1336 Map 33 or by extending the current Upper Green Drive.

i. If an entry via site 1336 was considered I would question the viability regards safety of the said junction as it would need to join Westerton road straight after the bend when approaching towards Westerton School.

ii. If the entry was via extending Upper Green Drive I would then propose that this is a potential threat to children's safety by increasing the volume of traffic that would enter the existing development via the single entry directly opposite Westerton school which is already heavily congested at school opening and closing times.

The width of the current developments roads on Upper Green would also be questionable as to whether they would be safe with a higher volume of traffic as currently cars can not pass comfortably without taking avoiding action.

4. School Capacities

a. Westerton — the Head of Westerton has already confirmed in writing that the school is already at maximum capacity moving into the next several years.

b. Blackgates — This school has already been enlarged and again the Head has confirmed that they are also at maximum capacity once again.

c. Woodkirk — Once again it is my belief that the Head of Woodkirk is of the opinion that the school is at capacity therefore with the school being fed by Westerton and Blackgates (amongst others) how would they possibly cope with additional children in the area?

5. Other Community Facilities

a. Would other facilities such as doctors and dentists etc be overstretched by this increased population? Leigh View Medical practice has already been recently redeveloped therefore I would certainly question the potential risk with increase local population.

6. Character of the Area

a. With a development on the scale envisaged for site 3373A, particularly when combined with other existing developed sites in my opinion it does not "respect the character and objectives of the local communities" as quoted in paragraph 84 of the Plan Overview.

b. Have all of the brown belt sites been considered for their viability. Although brown belt sites tend to be more expensive to develop these must be higher on the development priority list to assist their regeneration and preserve green belts to maintain the character of the local areas.

C.

7. Are the wards in partnership with the potential proposals?

a. Site 1336 and most but not all of 3373A are in Ardsley and Robin Hood ward however the remainder of 3373A and most of the residents who would be effected live in the Morley South ward.

8. Viability of developing site 3373A

a. Parts of this site have serious variations in its levels with steep slopes, potential instability caused by mining (there is a bell pit at the end of Upper Green Way) and possible restrictions from a former landfill site. In reality would the use of this site

Reason for change from Green to Red - Additional Information — Site 3373A Haighwell Map 33

1. Damage to Haigh Wood, other tress and wildlife.

a. Our property is next to the 3373A site and we have all types of wildlife enter our garden throughout the year from fox's, hedgehogs, squirrels and fogs but the most regular of all are the Bats which during the spring and summer months can be seen circling the trees between site 3373A and our garden. The number of Bats which can be seen seem to vary but they can be seen most nights throughout the summer from about 22:00hrs which is I when my wife and I tend to sit and watch them. The regularity of these Bats together with the close proximity in which they circle would suggest that the roost would most probably be within the 3373A site. As I'm sure you will be fully aware making planning decisions without the due consideration of priority species is contrary to the Natural Environment and Rural Communities (NERC) Act 2006 which applies to all public organisations, including local authorities. S.40 of the Act states "Every public authority must, in exercising its functions, have regard, so far as is consistent with the proper exercise of those functions, to the purpose of conserving biodiversity." Under s.41 of the Act, bats are listed by Defra as a priority species for the conservation of biodiversity.

b. The site itself includes part of a Tree Preservation Order area.

c. With development of the 3373A & 1336 sites would mean the complete enclosure of the already mainly secluded valley and would therefore suggest that LDF actually changes the area by extending the area of protection.

2. Av ;culture

a. Site 3373A is currently used as agriculture and therefore I would question why it is not a viable option for this to be maintained.

3. Inadequacy of access roads.

a. Access to the site would have to be either on to the main Westerton Road via site 1336 Map 33 or by extending the current Upper Green Drive.

3373B – This should be designated green belt not open land. As stated in the summary of the of the SLP this is an important open space and should be protected and access maintained – through fields not built up areas, to keep the openness.

Name: Annie McNally

Representor No: PRS03059

Representation ID: REP00387 Question Ref: G1

I think it is disgusting that the council are wanting to build on greenbelt land on proposed Plots 1336, 3373, 3372, 3373A, 3373B, 3373C, 1330B, 1330A, 536. And 3456A. It is an area of outstanding beauty where people enjoy walking, running, playing and riding horses. Many wild animals live in the fields and to take it away would turn this area into a concrete jungle. It would mean my view at the back would be eradicated, lowering the value of my house, but more importantly the pleasure I have everyday when I look across the field. This city needs green areas where we can walk and get away from the stresses of life. Also, to the rear of my property there is bindweed in the field which I believe would make it difficult for any developers to be able to build on that land. There are plenty of brown field sites which can be developed. Do not take away our green spaces. Totally outrageous.

Name: Stephen Wild

Representor No: PRS03279

Representation ID: REP00620 Question Ref: H2

3373C. This is a green field site. It is, physically, green fields. Access will not be sufficient if it is intended to use Hill Top Lane, which is already congested with resident parking. Local schools are already full, and services for local residents (shops etc) are poor - additional housing will not help. The distinction between 3373C and 3373B seems arbitrary: in open character of the countryside around Haigh Wood is part of the landscape as much worth preserving as the woods themselves.

Name: Michael Short

Representor No: PRS03405

Representation ID: REP01941 Question Ref: H1

Whilst we are in broad agreement with the designation of green sites at Haigh Wood in the Outer South West area of Leeds, we have concerns regarding the boundaries between the "green" and "red" sites. We agree with and support the allocation of land at Haigh Wood for housing with a central area in the vicinity of Haigh Wood LNA left undisturbed, but feel that this primary objective can be better achieved with different boundaries to sites 3373A, 3373B, 3373C and 1336

Representation ID: REP01941 Question Ref: H3

As a corollary to the explanation provided at H2 and in the attached document, we suggest that parts of site 3373B be re-designated as green, in accordance with Figure 6 and Appendix 1 of that document. These sections are in areas which are not needed to be kept undeveloped for the preservation of the green corridor between the two development parcels. New access points, via Upper Green Avenue/Upper Green Way and a new junction onto Westerton Road will facilitate improved integration into the transport network. As mentioned above, the alignment of site 3373B would be more logical if it followed the suggested revised indicative masterplan included in the attached document (at Figure 6 and Appendix 1). The green corridor will be further protected by the removal of the previously suggested vehicular link road between the two parts of the Haigh Wood site. The new alignment will preserve the vast majority of the hedges and existing trees on the site, whilst allowing a more logical and achievable layout for future development. Additionally, no development is proposed within the vicinity of the LNA or the stream running down the valley.

Representation ID: REP01941 Question Ref: H8

As explained at H3 and in the attached documents, we believe that sections of site 3373B should be re-designated as green, instead of parts of site 1336 and 3373A.

Representation ID: REP01941 Question Ref: H9

As explained at H2 and in the attached documents, we suggest that parts of sites 1336 and 3373A would be more suitable for colour coding as red, whilst parts of site 3373B should be green.

Representation ID: REP01941 Question Ref: H11

The suggested revised allocations at Haigh Wood (see Figure 6 and Appendix 1 of the attached document) ("green" land) are all suitable for short term delivery.

Representation ID: REP01941 Question Ref: H2

We agree with the Council that the central valley at Haigh Wood should be excluded from development, as a green corridor between proposed development sites. This was the Council's intention in designating site 3373B as red. However, the alignment of the valley suggested by site 3373B does not accurately reflect the topography of the area, the trees, the stream and the LNA and how these will affect potential development, nor does it align with what we suggest is the true extent of the central valley. We therefore suggest that sections of sites 3373A and 1336 be re-designated as red, in accordance with the attached documents (Document for Residential and Open Space Allocation Addendum dated July 2013, in particular Figure 6 and Appendix 1, and the covering letter) outlining the detailed justification for our proposed new alignment for the central valley. The sections of sites 3373A and 1336 which we suggest are re-designated as red are not suitable for development, as they incorporate important arboricultural features which will be difficult to incorporate into a housing development and are best left as part of the green corridor between the two development parcels. Conversely, parts of site 3373B should be added as green, not red, for similar reasons, but in reverse; the area can be developed without harm to what is sought to be protected, as further explained below.

Representation ID: REP00848 Question Ref: H1

sites 3373A, 3373B, 3365,1258,site 1330B 464 houses in such a small vicinity is unsustainable, there are currently just over 300 pupils at Hill Top Primary School with no room for any expansion, the school is full and the same is true of Westerton. Leeds City Council have in their allocation plan confirmed that Ardsley and Robin Hood have a deficiency in parks and gardens (the only area in Leeds South West to be deficient)natural greenspace should be used to reduce the deficit and improve our community. Our GP surgeries are at breaking point the surgery at Leigh View was recently extended and it's difficult to envisage how this could be extended further.Further erosion of the demarcation between West Ardsley & Tingley – , the two areas will be barely distinguishable from each other which is contrary to the Councils policy SP1 which clearly states smaller Settlements will contribute to development needs, with the scale of growth having regard to the settlement's size, function and sustainability. If these plans were approved it will no doubt result in urban sprawl with no identifiable boundaries. Our fields provide a public amenity development would virtually eliminate the open centre and consolidate the semi-rural group of settlements into a predominantly urban residential area". This view was endorsed by the Secretary of State in their past decision letter.Our road network was not built to support the existing volume of traffic , we do not have the infrastructure to support development of this scale, our public transport links are very poor with only one bus an hour into Leeds, the only viable means of transportation is by car which will have a cumulative impact on the A650 and A653 which are already congested.

Representation ID: REP00848 Question Ref: H9

site 3373A and 3373c should be coded red for all the issues previously stated plus site 3373A Lee gap Fair is held twice a year in these fields, the fair is the oldest horse fair in England dating back to 1136 and forms part of the history and heritage of the area.site 3373C It can be argued that the highways infrastructure for Site 3373B is inadequate, there are Highways concerns re poor accessibility for the number of houses proposed and then there is the issue of Highways safety with the junction of Hilltop Lane being within 100 metres of the primary school.

Question Ref: General comment

Site 3373C Objections1. Local character and identityDevelopment of this site would be contrary to the following sections of the Council's policy SP1 in the Core Strategy:1. SP1 (i) states: "Smaller Settlements will contribute to development needs, with the scale of growth having regard to the settlement's size, function and sustainability." Site 3373A, with its estimated capacity of 130 dwellings, does not have regard to the size, function and sustainability of West Ardsley.SP1 (iii) states: "For development to respect and enhance the local character and identity of places and neighbourhoods". The local character and identity of West Ardsley would be seriously threatened by 3373a, 3373C and 1336, and would make its component areas of Upper Green, Haigh Moor and Hill Top barely distinguishable from each other.My view accords with three decision letters from the Planning Inspectorate which were used in the Council's own evidence to the Unitary Development Plan public inquiry in 1995. In paragraph 39 of his report on the Morley Local Plan, the inspector considered that the planned development at Haigh Wood (site WA2H) would have a "very serious impact upon the character and environment of West Ardsley". He concluded in paragraph 10: "In the past, development in the Morley area would appear to have been sporadic and opportunist, placing the identity of the smaller settlements at risk and tending towards the creation of amorphous sprawl of development across the area along the length of the A650 Bradford to Wakefield road. In my view, the further diffusion of the existing loosely-knit settlement pattern should, as far as possible, be resisted."Considering appeals in 1986 on 81/23/00212 and 81/23/00213 (broadly the same area as LDF sites 3373A/B/C and 1336) the inspector said "It would virtually eliminate the open centre and consolidate the semi-rural group of settlements into a predominantly urban residential area". This was endorsed in the Secretary of State's decision letter.In 1994, a third inspector dismissed an appeal to develop land at Arthington Close near the the edge of Haigh Wood because it would "unacceptably erode the fringe of this rural area and would lead to pressure for further encroachment of residential development, most particularly in the fields to the west..."Although some years have passed since these decisions, the character and environment of the area are still semi-rural and just as delicate. When cogent arguments have been repeatedly made against development of the 3373 areas by the Secretary of State, by three planning inspectors and by Leeds Council itself (in evidence to the UDP inquiry), there can be no justification for sites 3373A, 3373C and 1336 being pursued for residential development in the LDF. They should instead be reclassified as "red" and withdrawn from consideration for development when producing the next stage of the plan.2. Damage to Haigh Wood and Baghill beck valleyDevelopment of this site would be contrary to the Council's policy P12 in the Core Strategy:"The character, quality and biodiversity of Leeds' townscapes and landscapes, including their historical and cultural significance, will be conserved and enhanced to protect their distinctiveness through stewardship and the planning process." The secluded Haigh Wood valley comprises the central portion of site 3373A, including part of the wood covered by a Tree Preservation Order. Residential development would prejudice the objectives underlining this policy as set out in paragraphs 5.3.46 to 5.3.48 of the Core Strategy including: "The Council seeks to protect and enhance the varied landscapes of Leeds and the assets they contain, from valued local trees, the countryside to nationally designated landscape, fauna and flora". This view was endorsed by three planning inspectors and again in the Council's evidence, given by Mr G B Andrews, at the UDP inquiry. In his paragraph 4.3.6, Mr Andrews stated: I refer to the conclusions reached by the inspectors at the two subsequent appeal cases in 1985 and 1994. In each case it is acknowledged that the Haigh Wood area is of value as an area of attractive open farmland with a rural character and provides an important amenity in the local area". Even the Council's own assessment for the LDF states that the site is: "Not supported (RED). This site includes Haigh Wood and Baghill Beck Local Nature Area which fall under UK Biological Action Plan priority habitats - a mixture of woodland, scrub and grassland habitats alongside Baghill Beck. There are a number of wide hedgerow/woodland belts throughout the site that provide a valuable habitat. Water vole has been recorded on the Hey Beck. The Baghill Beck flows into this water course and could support this species. Bats to consider."3. FairnessThe Core Strategy seeks to be "fair". The word is used in paragraph 1.2 and again in 1.14. Yet the proposed green housing sites when taken together would definitely not be fair to West Ardsley and Tingley. No justification has been given as to why there is such a concentration here, nor any evidence of local need. Indeed, paragraph 4.6.14 states that "The SHMA 2011 was not able to identify any geographically specific need for new housing based on population growth." The sites seem to have been assessed individually rather than their cumulative impact. This impact is potentially very much greater when considered alongside Kirklees Council's proposals for the Chidswell area. 4. Highway access The Upper Green culs-de-sac and Hill Top Lane cul-de-sacs are not suitable to serve more houses. They would become much less safe for children to play in and the already severe dangers at school times would be exacerbated.5. SchoolsPrimary and secondary schools already full and difficult to expand further.6. Agricultural landGood quality agricultural land would be lost.7. ViabilityExtra costs from: a. parts of 3373A and 3373C have serious levels problems and look undevelopable; b. bell pits known to exist in the area from former mining; c. elimination of Japanese Knotweed.The site on Westerton Road from Regency Gardens to Westerton Wood if developed will see 117 new homes - this land is currently classed as green belt (site 3365 = 83 homes and site 1258 = 34 homes) development here will represent a major incursion into the Green belt and will create further pressure on Ardsley reservoir as a local beauty spot. Development of sites 3365 and 1258 will result in the loss of valuable agricultural land, there are a number of wide hedgerow and woodland belts throughout the site that provide a valuable habitat for wildlife in particular bats. Development of the sites on Westerton Road will result in the amorphous sprawl of development across the area along the whole length of the Westerton Road.Site 1330B is an extension of the building that is currently ongoing adjacent to Jude's pond - and is for a further 32 houses ! This site has major highways access issues and has less than the recommended visibility splay for highways safety - further development of this site will exasperate current problems regarding drainage on the land - Haigh Moor Road residents already have to deal with flooding of the pavements and highways in the vicinity of Jude's pond. 464 houses in such a small vicinity is unsustainable, there are currently just over 300 pupils at Hill Top Primary School with no room for any expansion, the school is full and the same is true of Westerton which as you know was a small village school 20 years ago but is now one of the biggest primary schools in the Leeds district and all because of the amount of building that has taken place over recent years.Leeds City Council have in their allocation plan confirmed that Ardsley and Robin Hood have a deficiency in parks and gardens (the only area in Leeds South West to be deficient) - our children already have very little designated play areas, they have also confirmed that we are deficient in outdoor sports areas and facilities for children to play. We have however got a surplus of natural green space which is currently under threat of housing - if this natural greenspace is to be used for any purpose, surely it should be used to reduce the deficit and improve our community. Further reduction of amenity greenspace in an area which is seeing more and more housing development is unfair and unsustainable.Our GP surgeries are at breaking point with current waiting times for appointments being in excess of two weeks, the surgery at Leigh View was recently extended and it's difficult to envisage how this could be extended further to serve the population boom that will ensue if all these sites are developed.Further erosion of the demarcation between West Ardsley & Tingley - soon the two settlements will merge into one and West Ardsley as a separate community will be subsumed into its near neighbour, the two areas will be barely distinguishable from each other which is contrary to the Councils policy SP1 which clearly states smaller Settlements will contribute to development needs, with the scale of growth having regard to the settlement's size, function and sustainability. If these plans were approved it will no doubt result in urban sprawl with no identifiable boundaries.Our fields provide a public amenity for dog-walkers, cyclists, ramblers and local residents alike and It would virtually eliminate the open centre and consolidate the semi-rural group of settlements into a predominantly urban residential area". This view was endorsed by the Secretary of State in their past decision letter.Our road network was not built to support the existing volume of traffic , we do not have the infrastructure to support development of this scale, our public transport links are very poor with only one bus an hour into Leeds, the only viable means of transportation is by car which will have a cumulative impact on the A650 and A653 which are already congested.

Site Reference MAP 33, 3373 A-C. Access problems by increased road traffic to Hill Top Lane/Batley Road. Road safety concerns as access to site is close to primary school and on a bad bend. Access also affected by parked vehicles outside residences directly opposite Hill Top Lane. Ability of local services to cope with extra residents attending local schools and doctors surgeries; personal experience over last six years of just getting a routine doctors appointment has gone from two days to two weeks, due to previous developments in the area. Loss of these areas reduces public access to less formal recreational space and traffic free footpaths. These developments would undoubtedly have an impact on the local wildlife in Haigh Moor Wood. (eg. Bats).

Name: Robin Colvill

Representor No: PRS04071

Representation ID: REP01143 Question Ref: H1

Hill Top Lane is a lane not a wide road and would not be able to take the traffic for another 120 houses, the schools are all over full children are having to travel out of the area. wildlife, bats etc would be affected in the close by woods, walkers would not have the amenity anymore, the doctors surgery cannot handle the patients they have now with sometimes 3 weeks waiting for an appointment, road safety is a major concern as school time is a nightmare on Hill top lane with double parked cars already. Even if another exit on to Haigh moor rd were to be made that in itself would cause even more problems as Haigh moor rd is constantly full of parked cars on both sides and a real hazard to negotiate. we are not talking about a small number of homes which would probably be ok but the amount of homes is far beyond the amount that the area can accommodate, I strongly disagree with any building on this field [x]

Representor No: PRS04274

Representation ID: REP01764 Question Ref: G1

The suggestion to develop the area around Haigh Wood in West Ardsley is detrimental to the wood. This is a natural bluebell wood which is rare in this area. Increasing housing in close proximity will destroy the natural habitat. The area around West Ardsley reservoir is a prime example of over use by the local population and as such access will probably have to be closed due to damage. The same thing will happen to the wood as there will be even less greenspace for leisure. Part of the area is also covered by a mediaeval charter to allow Lee Fair to meet on the land yearly.

I wish to make reference to the LDP, map 31 site 3373A-C in that I have concerns re access problems by increased traffic; road safety concerns as we are close to the school; the ability of local services to cope in the event of a large influx of people; the loss of identity for the village (which has already had a vast number of additional houses in the last 10/15 years) and damage to wildlife in Haigh Moor Wood, if there is development such as proposed in this Plan.

Representation ID: REP02081 Question Ref: General comment

Sites:3373a and 3373c (agree 3373b should be red) Also query 536 . With sites 3373a and c I am concerned about the access -if Hill Top Lane is used the road isn't wide and the junction with Batley Road has long been a concern. Cars park directly opposite the junction (terraced houses no drives) and on both sides of Hill Top Lane - especially of concern is school pick up and drop off parking - I am surprised there hasn't been a serious accident with children from Hill Top School and speed is also a concern. If more traffic on the road accessing or cutting through the risk is so much greater. The houses were built with covenants against hedges etc to preserve sight lines.

1. Local character and identityDevelopment of site would be contrary to the following sections of the Council's policy SP1 in the Core Strategy: - Site 3373A, with its estimated capacity of 130 dwellings, does not have regard to the size, function and sustainability of West Ardsley.SP1 (iii) states: "For development to respect and enhance the local character and identity of places and neighbourhoods". The local character and identity of West Ardsley would be seriously threatened by 3373A, especially when combined with sites 3373C and 1336, and would make its component areas of Upper Green, Haigh Moor and Hill Top barely distinguishable from each other.My view accords with three decision letters from the Planning Inspectorate which were used in the Council's own evidence to the Unitary Development Plan public inquiry in 1995. In paragraph 39 of his report on Morley Local Plan, the inspector considered the planned development at Haigh Wood (site WA2H) would have a "very serious impact upon the character and environment of West Ardsley". He concluded paragraph 10: "In the past, development in the Morley area would appear to have been sporadic and opportunist, placing smaller settlements at risk and tending towards the creation of amorphous sprawl of development across the area along the length of the A650 Bradford to Wakefield road. In my view, the further diffusion of the existing loosely-knit settlement pattern should, as far as possible, be resisted."Considering appeals in 1986 on 81/23/00212 and 81/23/00213 (broadly the same area as LDF sites 3373A/B/C and 1336) the inspector said "It would virtually eliminate the open centre and consolidate the semi-rural group of settlements into a predominantly urban residential area". This was endorsed in the Secretary of State's decision letter.In 1994, a third inspector dismissed an appeal to develop land at Arthington Close near the edge of Haigh Wood because it would "unacceptably erode the fringe of this rural area and lead to pressure for further encroachment of residential development, particularly in the fields to the west...".Although some years ago these decisions, the character and environment of the area are still semi-rural and just as delicate. When cogent arguments have been repeatedly made against development of the 3373 areas by the Secretary of State, by three planning inspectors and by Leeds Council itself (in evidence to the UDP inquiry), there can be no justification for sites 3373A, 3373C and 1336 being pursued for residential development in the LDF. They should instead be reclassified as "red" and withdrawn from consideration for development when producing the next stage of the plan.2.Damage to Haigh Wood and Baghill beck valley - Development of this site would be contrary to the Council's policy P12 in the Core Strategy:

3373c - proximity to protected wildlife on site 3373b and serious access and highways issues.

Representation ID: REP01649 Question Ref: H2

3373 a-c. Particularly site C at the top of hill top lane, through which access would be fed. This leads off Batley road which is very dangerous already, especially during school start and finish times when traffic is increased. The addition of 144houses, minumum 2 cars per house, would be hugely detrimental to road safety and heighten risk. In addition capacity of local amenities such as schools to cope is questionable. There has been considerable building of housing in recent years, and still continuing, but no increase in capacity of amenities. Site A has comments regarding wildlife in Haigh wood, and these comments should also apply to site C, particularly bats which fly regularly across site c.

Housing

Haigh Wood, Ardsley

Name: Andrea Heibel

Representor No: PRS05109

Representation ID: REP05689 Question Ref: H7

Please note my objections to the proposed developments below.
The proposal for site 3373A (This is the site that runs from the top of Baghill around the back of Arthington Close and Upper Green and will finish on Westerton Road opposite Lonsdale Rise) is to build 130 houses. Lee gap Fair is held twice a year in these fields, the fair is the oldest horse fair in England dating back to 1136 and forms part of the history and heritage of the area.
The 3373C site which will run from the top of Hilltop Lane and carve up all the fields from there to Nook Green on Haigh Moor Road is for 144 houses. It can be argued that the highways infrastructure for Site 3373B is inadequate, there are Highways concerns re poor accessibility for the number of houses proposed and then there is the issue of Highways safety with the junction of Hilltop Lane being within 100 metres of the primary school. All the issues on the attached letter are also relevant for site 3773C.
The site on Westerton Road from Regency Gardens to Westerton Wood if developed will see 117 new homes - this land is currently classed as green belt (site 3365 = 83 homes and site 1258 = 34 homes) development here will represent a major incursion into the Green belt and will create further pressure on Ardsley reservoir as a local beauty spot.
Development of sites 3365 and 1258 will result in the loss of valuable agricultural land, there are a number of wide hedgerow and woodland belts throughout the site that provide a valuable habitat for wildlife in particular bats.
Development of the sites on Westerton Road will result in the amorphous sprawl of development across the area along the whole length of the Westerton Road.
Site 1330B is an extension of the building that is currently ongoing adjacent to Jude's pond - and is for a further 32 houses ! This site has major highways access issues and has less than the recommended visibility splay for highways safety - further development of this site will exasperate current problems regarding drainage on the land - Haigh Moor Road residents already have to deal with flooding of the pavements and highways in the vicinity of Jude's pond.
Please note that all these sites are in addition to any planning applications that have already been approved.
464 houses in such a small vicinity is unsustainable, there are currently just over 300 pupils at Hill Top Primary School with no room for any expansion, the school is full and the same is true of Westerton which as you know was a small village school 20 years ago but is now one of the biggest primary schools in the Leeds district and all because of the amount of building that has taken place over recent years.

Representor No: PRS05109

Leeds City Council have in their allocation plan confirmed that Ardsley and Robin Hood have a deficiency in parks and gardens (the only area in Leeds South West to be deficient) - our children already have very little designated play areas, they have also confirmed that we are deficient in outdoor sports areas and facilities for children to play. We have however got a surplus of natural green space which is currently under threat of housing - if this natural greenspace is to be used for any purpose, surely it should be used to reduce the deficit and improve our community. Further reduction of amenity greenspace in an area which is seeing more and more housing development is unfair and unsustainable. Our GP surgeries are at breaking point with current waiting times for appointments being in excess of two weeks, the surgery at Leigh View was recently extended and it's difficult to envisage how this could be extended further to serve the population boom that will ensue if all these sites are developed. Further erosion of the demarcation between West Ardsley & Tingley - soon the two settlements will merge into one and West Ardsley as a separate community will be subsumed into its near neighbour, the two areas will be barely distinguishable from each other which is contrary to the Councils policy SP1 which clearly states smaller Settlements will contribute to development needs, with the scale of growth having regard to the settlement's size, function and sustainability. If these plans were approved it will no doubt result in urban sprawl with no identifiable boundaries. Our fields provide a public amenity for dog-walkers, cyclists, ramblers and local residents alike and It would virtually eliminate the open centre and consolidate the semi-rural group of settlements into a predominantly urban residential area". This view was endorsed by the Secretary of State in their past decision letter. Our road network was not built to support the existing volume of traffic , we do not have the infrastructure to support development of this scale, our public transport links are very poor with only one bus an hour into Leeds, the only viable means of transportation is by car which will have a cumulative impact on the A650 and A653 which are already congested. I look forward to your response and confirmation that these developments will not go ahead

Hi,

I would like to object against the planning proposals for the following sites on Map 33 (off Westerton Road)

1336

3373B

3373A

1330B

33732

3365

3373C

3456A

3456B

1258

I suggest that these should all be changed to RED due to the following reasons:

Too much traffic already so roads will be extremely busy right outside my front door. I have young children and will be scared for their safety.

Services such as Doctors surgery's, dentists, local hospitals, schools, supermarkets already too busy so won't be able to cope

Less water will be absorbed into the ground resulting in more flooding in our gardens.

This is currently already happening in several houses on Westerton Road including mine.

There are bats, foxes, owls, frogs, newts and many birds living in the area especially on sites 1336, 3373A, 3373B, 3373C. Should these not be protected?

House prices for homeowners in the area already will decrease.

We moved to the area because of the greenery and our view will be spoilt.

The sewerage system in place on Westerton Road recently failed causing waste from the sewers to overflow into nearby houses. This was due to the recent housing developments that have recently been built nearby so the sewerage system was unable to cope. This could very likely happen again.

Firstly I would like to express my disappointment and embarrassment towards the councils plans for the proposed plans listed below. I understand the reason behind the lack of communication with the residents in the area may be beneficial to the local council and certain government groups. It obviously cuts down on man hours and paperwork.

I would like to object against the planning proposals for the following sites on Map 33 (off Westerton Road)

1336

3373B

3373A

1330B

33732

3365

3373C

3456A

3456B

1258

The infrastructure in this area will struggle to cope with the demands of the services required.

The area is attracting wildlife not seen in built up areas. It seems a shame to disregard the wildlife issue I'm sure if a full environmental survey of the area was to be carried out this would scupper the planning permission. But again that would be an extra cost to the council which would have an impact at year end when the books are balanced.

Representation ID: REP05759 Question Ref: H4

I wish to object to 3373A, 3373B & 3373C.

[x]

I wish to object on the following grounds:

. The Haigh Wood site reference is 3373, and it is split into 3 parts:

. 3373A is land between Westerton Road & Haigh Wood. This has been assessed as suitable for residential development, with a capacity of 130 houses.

. 3373B is Haigh Wood itself. This has been assessed as unsuitable for residential development because of the topography of the site and access

. 3373C is the fields between Haigh Wood & Woollin Crescent, linking right round to Nook Farm.

The proposal for site 3373A (This is the site that runs from the top of Baghill around the back of Arthington Close and Upper Green and will finish on Westerton Road opposite Lonsdale Rise) is to build 130 houses. Lee gap Fair is held twice a year in these fields, the fair is the oldest horse fair in England dating back to 1136 and forms part of the history and heritage of the area.

The 3373C site which will run from the top of Hilltop Lane and carve up all the fields from there to Nook Green on Haigh Moor Road is for 144 houses. It can be argued that the highways infrastructure for Site 3373B is inadequate, there are Highways concerns re poor accessibility for the number of houses proposed and then there is the issue of Highways safety with the junction of Hilltop Lane being within 100 metres of the primary school. All the issues on the attached letter are also relevant for site 3373C.

The site on Westerton Road from Regency Gardens to Westerton Wood if developed will see 117 new homes - this land is currently classed as green belt (site 3365 = 83 homes and site 1258 = 34 homes) development here will represent a major incursion into the Green belt and will create further pressure on Ardsley reservoir as a local beauty spot. Development of sites 3365 and 1258 will result in the loss of valuable agricultural land, there are a number of wide hedgerow and woodland belts throughout the site that provide a valuable habitat for wildlife in particular bats. Development of the sites on Westerton Road will result in the amorphous sprawl of development across the area along the whole length of the Westerton Road. Site 1330B is an extension of the building that is currently ongoing adjacent to Jude's pond - and is for a further 32 houses ! This site has major highways access issues and has less than the recommended visibility splay for highways safety - further development of this site will exasperate current problems regarding drainage on the land - Haigh Moor Road residents already have to deal with flooding of the pavements and highways in the vicinity of Jude's pond.

Please note that all these sites are in addition to any planning applications that have already been approved.

464 houses in such a small vicinity is unsustainable, there are currently just over 300 pupils at Hill Top Primary School with no room for any expansion, the school is full and the same is true of Westerton which as you know was a small village school 20 years ago but is now one of the biggest primary schools in the Leeds district and all because of the amount of building that has taken place over recent years.

Leeds City Council have in their allocation plan confirmed that Ardsley and Robin Hood have a deficiency in parks and gardens (the only area in Leeds South West to be deficient) - our children already have very little designated play areas, they have also confirmed that we are deficient in outdoor sports areas and facilities for children to play. 3373B Haigh Wood, West Ardsley - I support the Red designation of this site for the reasons set out in the consultation document. This wood is well used and much loved by the local community and walkers and cyclists from further afield and must be protected.

Name: Karen Williams

Representor No: PRS06027

Representation ID: REP06857 Question Ref: H7

Sites 3372 (Assumed as 3373 stated) & 3373 B - Red Agree with coding (Assumed)
I believe the areas in question are the only green areas left in the area for children to play, people to walk thier dogs etc, Tingley is already overcrowded with schools so much so that local children are having to travel to schools further away. this is the last of the green belt area left in tingley/ardsley. We already have too much traffic for such a built up area.

Allocations Issues and Options Document- Sites 536 (Nook Farm) , 1330 B (Adjacent to Judes Pond), 1336 (Westerton Road, and 3373 A, Band C (Haigh Wood)

We act on behalf of the West Ardsley Consortium that has made formal comments to the Leeds Site Allocations Issues and Options documents. We enclose a copy of the Document submitted with the formal response for your information.

Our clients are interested in sites 536 (Nook Farm) , 1330 B (Adjacent to Judes Pond), 1336 (Westerton Road, and 3373 A, B and C (Haigh Wood) and have previously made representations for the sites to be allocated, along with a substantial area of ecologically maintained open space centred around the Haigh Wood area.

Having seen the draft proposals our clients are supportive in principle of the Councils approach to identifying a large portion of the land promoted by them for residential development. The areas identified as "Green" (for development) in the Issues and Options document at Haigh Wood amount to 16.83 Ha of land with a suggested dwelling capacity of over 400 units (at a reasonably low 25/Ha). The areas identified as "Red" (felt to be not suitable for development) amount to 17.5 Ha. This sets an approach of slightly over half the land being protected from development.

We note that the site known as Nook Farm (536) is an existing UDPR commitment and has no policy designation that has or would suggest anything other than its suitability for residential development. That site also has (contrary to the suggestion in the Issues and Options document) an extant planning permission. The details of this are set out in our formal representations.

I have reviewed the indicative boundaries suggested between the "Green" and "Red" sites in the Issues and Options document and undertaken a detailed assessment against trees, topography, the LNA of Haigh Wood and the stream running through it, whilst acknowledging the need for an uninterrupted green corridor separating the north west and south east areas of land, our clients are firmly of the view that the Councils preliminary work does not produce appropriate boundaries between development allocations and non development allocations. For example as figure 3 in the attached document shows land is identified by the Council for development in site 33 73A that includes part of the LNA, the trees of Haigh Wood and the stream running through it, whilst seeking to protect from development land to the south east which has none of those considerations applying to it.

Utilising the work already done on ecology, trees and hedges, landscape and topography, our Clients have carefully considered the Councils objectives and aspirations from the comments in the tables and pro Wilker Mon's L.L.P is a limited liability partnership which is registered in England and Wales with registration number OC338981 Registered office King's Court, 12 (King) Street, Leeds LS1 2HL Authorised and regulated by the Solicitors Regulation Authority. Ms L Pickering

29 July 2013

Page 2

forms associated with the Issues and Options document. They have produced a revised masterplan and from that been able to identify appropriate development and allocation boundaries. These maintain a broad green corridor through the valley, protecting ecological interests, trees and the stream as well as views and the "open feel" of the valley itself. In particular this has not only widened the broad swathe of green between the development areas, compared to the earlier 2012 masterplan, but removed any road connections across the valley.

The resultant masterplan has been informed by all the Consortium team's professional disciplines and the changed highways connections fully evaluated to ensure they work appropriately.

The outcome is that of the area in the UDPR that is identified as N 11 (some 36.14 Ha) only 40% is now proposed for development. The suggested allocations (boundaries shown in red on Figure 6 of the attached document include (so that the allocations are not excessively subdivided) substantial green corridors and strategic planting, amounting to some 3.241ha. These run along the existing and proposed pedestrian and bridleway access corridors to the valley and the Wood. The suggested total area of the allocations (including the 3.24 Ha of undeveloped green space) is under half of the current N 11 land at 17.66 Ha. We believe this provides the right balance of development and protection of the wider site.

We note that the areas identified as "Green" in the Issues and Options document in this Outer South West area are insufficient by some margin (1,432) to meet the Core Strategy suggested proportion of housing for the area, even taking into account (and not questioning) the amount of development to come forward from permissions and existing allocations. There should be no doubt that all "Green" sites should therefore go forward for allocation. Indeed more will need to be found from "Amber" or even "Red" sites to provide sufficient land. In addition, there are proportionately far fewer "Green" sites (compared to "Amber") in East and West Ardsley than there are in Morley or the rest of the Outer South West.

The site at Haigh Wood with its non greenbelt status and accessibility and sustainability credentials provides a very good location for development and the provision of material environmental benefits through protection, increased access and environmental management of the Wood itself. As there have to be exceptional circumstances to take land out of the greenbelt, there must correspondingly be exceptional circumstances not to develop at Haigh Wood ahead of greenbelt land.

For all of these reasons our clients, look forward to working with the Council to bring forward development in line with the attached revised masterplan, which we believe fully addresses all comments made in the Issues and Options document and the related provisions about the land at Haigh Wood.

Dear Madam

Allocations Issues and Options Document - Sites 536 (Nook Farm) , 1330 B (Adjacent to Judes Pond), 1336 (Westerton Road, and 3373 A, B and C (Haigh Wood)

We act on behalf of the West Ardsley Consortium that has made formal comments to the Leeds Site Allocations Issues and Options documents. We enclose a copy of the Document submitted with the formal response for your information.

Our clients are interested in sites 536 (Nook Farm) , 1330 B (Adjacent to Judes Pond), 1336 (Westerton Road, and 3373 A, B and C (Haigh Wood) and have previously made representations for the sites to be allocated, along with a substantial area of ecologically maintained open space centred around the Haigh Wood area.

Having seen the draft proposals our clients are supportive in principle of the Councils approach to identifying a large portion of the land promoted by them for residential development. The areas identified as "Green" (for development) in the Issues and Options document at Haigh Wood amount to 16.83 Ha of land with a suggested dwelling capacity of over 400 units (at a reasonably low 25/Ha). The areas identified as "Red" (felt to be not suitable for development) amount to 17.5 Ha. This sets an approach of slightly over half the land being protected from development.

We note that the site known as Nook Farm (536) is an existing UDPR commitment and has no policy designation that has or would suggest anything other than its suitability for residential development. That site also has (contrary to the suggestion in the Issues and Options document) an extant planning permission. The details of this are set out in our formal representations.

Having reviewed the indicative boundaries suggested between the "Green" and "Red" sites in the Issues and Options document and undertaken a detailed assessment against trees, topography, the LNA of Haigh Wood and the stream running through it, whilst acknowledging the need for an uninterrupted green corridor separating the north west and south east areas of land, our clients are firmly of the view that the Councils preliminary work does not produce appropriate boundaries between development allocations and non development allocations. For example as figure 3 in the attached document shows land is identified by the Council for development in site 3373A that includes part of the LNA, the trees of Haigh Wood and the stream running through it, whilst seeking to protect from development land to the south east which has none of those considerations applying to it.

Utilising the work already done on ecology, trees and hedges, landscape and topography, our Clients have carefully considered the Councils objectives and aspirations from the comments in the tables and pro formas associated with the Issues and Options document. They have produced a revised masterplan and from that been able to identify appropriate development and allocation boundaries. These maintain a broad green corridor through the valley, protecting ecological interests, trees and the stream as well as views and the "open feel" of the valley itself. In particular this has not only widened the broad swathe of green between the development areas, compared to the earlier 2012 masterplan, but removed any road connections across the valley.

The resultant masterplan has been informed by all the Consortium team's professional disciplines and the changed highways connections fully evaluated to ensure they work appropriately.

The outcome is that of the area in the UDPR that is identified as NI 1 (some 36.14 Ha) only 40% is now proposed for development. The suggested allocations (boundaries shown in red on Figure 6 of the attached document include (so that the allocations are not excessively subdivided) substantial green corridors and strategic planting, amounting to some 3.24Ha. These run along the existing and proposed pedestrian and bridleway access corridors to the valley and the Wood. The suggested total area of the allocations (including the 3.24 Ha of undeveloped green space) is under half of the current NI1 land at 17.66 Ha. We believe this provides the right balance of development and protection of the wider site.

We note that the areas identified as "Green" in the Issues and Options document in this Outer South West area are insufficient by some margin (1,432) to meet the Core Strategy suggested proportion of housing for the area, even taking into account (and not questioning) the amount of development to come forward from permissions and existing allocations. There should be no doubt that all "Green" sites should therefore go forward for allocation. Indeed more will need to be found from "Amber" or even "Red" sites to provide sufficient land. In addition, there are proportionately far fewer "Green" sites (compared to "Amber") in East and West Ardsley than there are in Morley or the rest of the Outer South West.

The site at Haigh Wood with its non greenbelt status and accessibility and sustainability credentials provides a very good location for development and the provision of material environmental benefits through protection, increased access and environmental management of the Wood itself. As there have to be exceptional circumstances to take land out of the greenbelt, there must correspondingly be exceptional circumstances not to develop at Haigh Wood ahead of greenbelt land.

For all of these reasons our clients, look forward to working with the Council to bring forward development in line with the attached revised masterplan, which we believe fully addresses all comments made in the Issues and Options document and the related proformas about the land at Haigh Wood.

Yours faithfully

[x]

No site ref given - assume sites 3373A, B, C

I would like to object to the land at the top of Hill top Lane West Ardsley being allocated for housing, My main concern is the junction coming out of Hill top Lane onto Batley road which already is a hazard, it is a T junction with houses directly facing the end of Hill Top Lane, and the residents park their cars directly in front of their properties. this makes the narrow road even narrower, cars coming up Haybeck lane have a blind corner and some come at terrific speed, there are children crossing at school times and I have witnessed many near misses. Speed cameras ,sleeping policemen and SLOW DOWN signs are needed already to prevent the inevitable happening. People Park on Hill Top Lane to drop children off at Hill Top School and Pick up ,on both sides of the road ,this causes access problems for residents.

The school is only 200 yards from the end of Hill Top Lane .Hill Top School is full to capacity, so unless the buildings are for elderly residents where would the children go to school? Our Local Doctors already have 17,000 patients and are not increasing the number of GP's, I know this as I work within the practice. Children play on Hill top lane on bikes and skate boards, and increased traffic would put a stop to that, it's quiet and safe at present, childrens freedom to play outside their homes in safety has to be considered.

The natural habitat enjoyed by birds, wildlife, walkers, dog walkers and children playing in Haigh Moor woods would be destroyed. The noise, dirt, and heavy plant traffic during development would have a massive affect on residents, especially the elderly who live in the bungalows on the left hand side. who ever has brain stormed this idea wants to come and spend an hour at the bottom of Hill Top lane one school morning and witness the chaos and danger there, we as residents are already inconvenienced greatly by the increased traffic since the School was built.

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Red Sites outside the Core Public Transport Network

Table 3 below contains sites that are classified as 'Sites not considered suitable for allocation for housing' and fall outside 400m of the current core bus network. Consideration needs to be given to if this site would be able to meet the LDF public transport accessibility requirements should housing be brought forward. We agree that these sites would not be suitable for housing development.

Oppose in current form - the boundaries between these sites and 3373B seem to have been drawn arbitrarily as straight lines, without regard to the features on the ground. As long, thin, single ended sites, questions arise as to the acceptability of such large numbers of houses off a single spine road.

3373A & 3373C Haigh Wood, West Ardsley - Green to Red

Damage to Haigh Wood and surrounding area - old historic site. Any more development would severely impact on this area in a detrimental way. This area needs protection not development due to flora and fauna of this area. Many bird species, bats, etc. A great number of people use this area for recreation and access to Haigh Moor Road and Batley Road. Access is required for Lee Fair, dating back to 1136 AD. (Surely no one can envisage the end of this oldest horse fair in the country).

The roads surrounding these sites are already clogged and there is a real danger of accidents to pedestrians due to the ongoing increase of traffic. My own address is almost inaccessible during term-time at Westerton School. Surrounding schools are already full and there is concern whether children reaching school age can even be accommodated in existing schools in the near future.

The whole community system would fail as Doctor's Surgeries, Dental Practices, etc are already turning people away because of the over population in this area.

We have a terrible public transport connection service and buses already have great trouble in negotiating Westerton and Skye roads at certain times of the day.

The suggested sites are well known undulating areas and this could prove difficult and costly to develop. There is also the mining and water wells to be considered.

Would the water supply be able to cope? The reservoir at Haigh Moor Road supplies this area.

If the trees (some of which are covered by a preservation order) are destroyed the area would lose all of its unique character and this would also impact on pollution levels.

Representation ID: REP02418 Question Ref: H1

3373A & 3373C Haigh Moor, Haigh Wood West Ardsley - Green to Red

We are already full!! Both public and private vehicles are clogging up on Westerton and Syke roads. Far more viable sites off Bradford Road or Thorpe Road.

Any further development would greatly and detrimentally impact on this historic and characterful area. Regards must be made to accommodate the oldest horse fair in the country (Lee Gap). The areas above provide well needed recreational space for walkers and cyclists and also access to Haigh Moor Road and Batley Road. Pollution would increase greatly if some of the natural habitat was disturbed as this is part of a site which is covered by a preservation order. There are numerous species of birds, plants, bats, and other creatures all native to this site.

Any development would impact on the scenery and views of residents in this area.

Our schools are at capacity already and any more vehicles in the area would give serious problems to the transport links and access to existing residential homes. We have limited shops in our area and not enough Doctor's surgeries or Dentists as it is! Where would all future children and adults go to school, doctors, dentists, etc.?

The site is very well documented as a mining area and consideration should be made to the water table in this area as there are wells and springs. Access would create major problems as the existing roads in our area were not designed for the existing amount of vehicles already trying to get from A to B.

I also have concerns regarding the pollution both from the lack of trees and the increase in traffic.

We have very poor public transport connections and a rise in buses would be totally unacceptable due to access at certain times.

Representation ID: REP04561 Question Ref: H1

3373C Haigh Wood, West Ardsley. Change from Green to Red. Retain as agricultural land.

I refer to the consultation on the Leeds Local Plan and wish to object to the allocation of land in Tingley in the Outer South West document. My primary objection is to site 3373A, but the points raised are equally applicable to site 3373B, 1336 & 13308.

I appreciate the need for Leeds Council to provide for sufficient land to meet its housing requirements through the plan period. However, Para 151 of the NPPF requires that such allocations deliver sustainable development as this is the prime objective of the planning system that underpins the core principles of the planning system. I believe that these allocations fail to provide sustainable development for the following reasons, and so should be deleted from the plan:

Accessibility to Services

It is a core principle of the NPPF that development should be located where it has a good access to services to minimise the need for regular travel to those services by less sustainable methods. One of the core principles in Para 17 states that plan-making should 'actively manage patterns of growth to make the fullest possible use of public transport, walking and cycling, and focus significant development in locations which are or can be made sustainable.'

The area around the allocations has a limited availability to services, with those that exists being local scale (corner food shops) or near to capacity (Westerton Primary school). All other services that are necessary for residential development are located beyond walking or cycling distance where access to them is only really achievable by car. This is not sustainable development.

The nearest existing supermarket to the allocations is at Morley which is over 2km from the site. The nearest neighbourhood centre allocated in the Outer South West plan is at Ardsley West which is also over 2km, but in the opposite direction so preventing any linked trips to these destinations. There is no community centre, sporting facilities, parks, cinema, etc.

When looking at access to employment opportunities the position is no better as the nearest concentrations of employment is over 1.5km distant, but is not safely accessible to the sites as it located across the M62 motorway. Indeed, the Outer South West plan identifies 14 sites within Ardsley and Robin Hood as having 'greatest potential for housing' and notes 7 other existing permissions/allocations, yet there is not a single existing or proposed employment site in the ward.

Surely this cannot be the coordinated development as is required to deliver the economic role of sustainable development that described in Para 7 of the NPPF, and so will also impact on the ability of the site's to demonstrate the social and environmental roles demanded by that Para.

Urban Form

The allocations will essentially close a gap that currently exists between the development around Westerton Road and that around Haigh Moor Road. These are distinct areas and the open land between them is a notable feature that is appreciated by the residents of both areas, and those traveling between them using either Baghill Road or Haigh Moor Road. These allocations will close that gap and so coalesce these settlements to the detriment of the identity of both. Development on the scale envisaged, particularly when combined with other development sites, does not "respect the character and objectives of local communities" (quote from paragraph 8.4 of Plan Overview.)

The retention of a narrow strip between these areas (allocation 3373B) will serve little benefit in preventing this coalescence as it is simply too narrow, and is in a natural dip where it will not be seen in views from the existing settlements. Instead these views will be taken up by the urban development on the two allocations which, due to their position on the slopes of the valley, will inevitably be the scene from all aspects in and around the area.

Wildlife Loss

Whilst the land is largely used and so managed for agriculture, and so of lesser wildlife importance, its margins and trees/hedgerows will be utilised by a range of species. It will also offer important foraging and commuting habitat for locally important species including foxes and bats and its development will therefore reduce their habitat. In turn this reduces the benefit of retaining site 3373B which I note your document explains is as it offers an attractive local resource for walkers and cyclists.

Agricultural Land

The land is designated as Grade 3 in the Natural England MAGIC website classification, albeit that this is based on a higher level and dated assessment. In the 28 years that I have overlooked the site it has always been farmed for crops, except in occasional fallow years. In reality I believe that this regular use for productive agriculture, the gentle sloping nature of the site to assist its drainage, and its south facing aspect will mean that the land of site 3373A is actually Grade 3a or even Grade 2. These grades are Best and Most Versatile Agricultural Land that is protected from development by Para 112 of the NPPF.

The retention of such land is becoming increasingly critical due to the role that it plays toward delivering national food security and to reduce the distances travelled and so environmental impact of providing food. In addition, anaerobic digestion and other such energy production methods will become increasingly important in the future to national energy security. In turn this means that agricultural land will be required to provide fuel for these energy production methods. Areas of Best and Most Versatile agricultural land should be retained wherever possible as their higher quality ensures that they are better able to be flexibly farmed meet these needs.

Scale of Development

Throughout the NPPF it references the important role that communities have to play, with Para 1 stating that plans should 'reflect the needs and priorities of their communities'. The area around Westerton Road has seen extensive areas of residential development in the past 28 years, with that continuing with the development by Redraw Homes off Haigh Moor Road. There is clearly an argument that the area has accepted its fair share of development in recent years. The implications of further development in the area would be an increase in the population at a time when the services to support them are not available. InPhasing

If it is decided that one or both of sites 3373A and 3373C are to be allocated then I request that they are phased for development in the later years of the plan. This would have twin benefits in allowing the recent growth in the area to be accommodated within the community and services to be established to support it, and would allow previously developed allocations and windfall sites to be developed first. Without that phasing the volume house builders in the market will inevitably take such greenfield sites forward as they are easier and so offer greater returns. This would not demonstrate the primacy of the plan-led system as required by Para 8.13.

Highway Capacity

An increase in housing in this area would only add to traffic problems along the A650 the A653 and other minor roads when there is an accident on the M62 when drivers try to find an alternative route.

Highway Safety

I note the intention to serve site 3373A by a single access point, being Upper Green Drive to Upper Green Avenue to meet Westerton Road opposite the primary school and then on via other routes to the main highway network. I cannot believe that a single access point is sufficient to service this number of properties, and cannot accept that the point at which it meets Westerton Road is appropriate.

Summary

I do not believe that the residential development of sites 3373A and 3373C would be sustainable development required by NPPF and so I ask that they be omitted from the Plan. If they are to be retained I request that they be phased to prevent development for a period of say 15 years to allow the community to become settled from recent growth, new services and employment opportunities to be developed and to allow the development of sequentially preferable brownfield sites elsewhere in the city.

I trust that these comments assist your consideration of the future housing allocations in this area. Please add my details to your consultation list so that I can be advised of any future consultation exercises of this nature.

3373c Off Haigh Moor Road - Green to Red

Next to site of Haigh Wood - would mar an existing area of natural interest.

Access would be via Haigh Moor Road . Congestion here with other proposed sites would be catastrophic for the residents of this area . Traffic would be too dense for the road network to handle.

Schools and doctors full up in this area.

Representor No: PRS00948

Representation ID: REP02976 Question Ref: H1

3373a Upper Green, Tingley/3373c Upper Green Tingley/1336 Upper Green Tingley - Green to Red
SITE ALLOCATION CHANGES —SITE NUMBERS 3373A / 3373C / 1336

We are completely against the development of the above sites for a number of reasons, both personal and in the overall interest of the people living within Greater Morley.

- Access —Suggested access to the new sites through current 'Upper Green' roads would not be viable as road width/layout does not comply with planning requirements for a throughroad.

At present certain areas of the roads cannot accommodate two cars at the same time, more houses mean more traffic. This could lead to huge health and safety issues for motorists and pedestrians alike. Currently traffic on these roads are already at a high especially at peak times and the start and end of the school day (Westerton Primary is directly opposite upper green and is extremely busy at drop off and pick up times).

- Local framework —The local schools (both primary and secondary) are already full and have waiting lists for children already living in the area. Primary schools such as Westerton (already considered a large primary with 100 children per year group) is full with a considerable waiting list, Blackgates Primary has already been expanded to cope with the demand and has no further scope to expand even more. Secondary schools such as Woodkirk and Morley Academy are full with waiting lists. Leeds City Council are aware that there are not enough secondary school places available in this area for children already in the state school system and have granted authority to build a free school in Leeds City Centre(to open 01/09/14). With this in mind perhaps redevelopment of areas surrounding the City Centre or areas within the City Centre should be considered.

- Local Doctors surgeries are already full and continue to take on new patients.

Appointments are non-existent with most people having to go to drop in clinics to sit and wait (sometimes for up to 2 hours). This is hugely problematic for vulnerable patients (small children and the elderly) that sometimes require immediate attention. As for registering with a local NHS dentist— it's virtually impossible!

- Impact on environment. Planning permission stated that when our house was built (2008) the builders had to maintain the few trees between adjoining properties because of impact on the local environment and also to provide screening. Yet the same council with their new plans are happy to see the destruction of acres of protected trees and shrubs (Haigh Woods). This would have a huge impact on wildlife where we have a thriving bird population (which is currently in decline nationally) and a number of protected bats in the area. These birds and bats live/breed and feed in the zones currently highlighted for development. Tingley's green fields are already in decline, brownfield sites should be considered for redevelopment before we destroy our environment further. Planning permission for 20,000 houses have already been granted within the Leeds Area that haven't been built yet, surely these houses should be built and derelict areas redeveloped before we consider destroying green fields and wooded areas.

- The value of current properties will be greatly affected by the addition of housing on the sites stated. Currently Upper Green Drive is one of the most expensive streets for house prices in WF3, houses are built to a high standard and of similar size/value. When we purchased our house in 2008 we paid a premium rate which took into account not only the quality of the house but the area in which the house was situated (idyllic views of green fields and woods). The planned development would have a huge impact on property value and with most houses on the street having been newly built or recently purchased (valued according to the location/setting) there is a major concern that many families would face the possibility of negative equity. The current economic climate is already taking its toll on many families; this would further financially impact them.

3373a Upper Green, Tingley/3373c Upper Green Tingley/1336 Upper Green Tingley - Green to Red
SITE ALLOCATION CHANGES —SITE NUMBERS 3373A / 3373C / 1336

We are completely against the development of the above sites for a number of reasons, both personal and in the overall interest of the people living within Greater Morley.

- Access —Suggested access to the new sites through current 'Upper Green' roads would not be viable as road width/layout does not comply with planning requirements for a throughroad.

At present certain areas of the roads cannot accommodate two cars at the same time, more houses mean more traffic. This could lead to huge health and safety issues for motorists and pedestrians alike. Currently traffic on these roads are already at a high especially at peak times and the start and end of the school day (Westerton Primary is directly opposite upper green and is extremely busy at drop off and pick up times).

- Local framework —The local schools (both primary and secondary) are already full and have waiting lists for children already living in the area. Primary schools such as Westerton (already considered a large primary with 100 children per year group) is full with a considerable waiting list, Blackgates Primary has already been expanded to cope with the demand and has no further scope to expand even more. Secondary schools such as Woodkirk and Morley Academy are full with waiting lists. Leeds City Council are aware that there are not enough secondary school places available in this area for children already in the state school system and have granted authority to build a free school in Leeds City Centre(to open 01/09/14). With this in mind perhaps redevelopment of areas surrounding the City Centre or areas within the City Centre should be considered.

- Local Doctors surgeries are already full and continue to take on new patients.

Appointments are non-existent with most people having to go to drop in clinics to sit and wait (sometimes for up to 2 hours). This is hugely problematic for vulnerable patients (small children and the elderly) that sometimes require immediate attention. As for registering with a local NHS dentist— it's virtually impossible!

- Impact on environment. Planning permission stated that when our house was built (2008) the builders had to maintain the few trees between adjoining properties because of impact on the local environment and also to provide screening. Yet the same council with their new plans are happy to see the destruction of acres of protected trees and shrubs (Haigh Woods). This would have a huge impact on wildlife where we have a thriving bird population (which is currently in decline nationally) and a number of protected bats in the area. These birds and bats live/breed and feed in the zones currently highlighted for development. Tingley's green fields are already in decline, brownfield sites should be considered for redevelopment before we destroy our environment further. Planning permission for 20,000 houses have already been granted within the Leeds Area that haven't been built yet, surely these houses should be built and derelict areas redeveloped before we consider destroying green fields and wooded areas.

- The value of current properties will be greatly affected by the addition of housing on the sites stated. Currently Upper Green Drive is one of the most expensive streets for house prices in WF3, houses are built to a high standard and of similar size/value. When we purchased our house in 2008 we paid a premium rate which took into account not only the quality of the house but the area in which the house was situated (idyllic views of green fields and woods). The planned development would have a huge impact on property value and with most houses on the street having been newly built or recently purchased (valued according to the location/setting) there is a major concern that many families would face the possibility of negative equity. The current economic climate is already taking its toll on many families; this would further financially impact them.

3373C

Lack of amenities – the amenities in the area cannot support the existing population of West Ardsley, never mind accepting an influx of possibly 5000 more.

- Virtually all the shops have closed over the years, there are now only 3 grocery shops in the area. Anyone living at the southern end of Haigh Moor Road has over 1 mile to travel to the nearest shop.

- The schools are overcrowded, Westerton Road has had more external classrooms added, so it cannot be extended. Hill Top School is nearly full now from the existing population growth, again it is extremely limited in expansion possibilities.

- Bus services are pathetic, services to Leeds, Dewsbury and Wakefield are hourly at best. Batley is only accessible from Wakefield –Batley Road. There are areas where buses have been removed completely. This week another service has been stopped.

- There are not any play areas for children, your own survey records this failing.

- There is only one medical centre with 8 doctors giving cover to some existing 15000 patients. To get an appointment with a specific GP can take 3 weeks, the centre has recently been extended to its limits so there is nowhere to go. Also there is only one pharmacist.

Traffic

All the roads in the area are in a bad state of repair, I have lived here for 28 years and Haigh Moor Road has never been resurfaced despite 3 new housing estates accessing it. In June 1992 the planning inspector denied a planning application (91/23/00350) for an annex for an invalid because although neither he nor his brother drove. The reason for this was "I am concerned that were an additional dwelling to be provided there would be no guarantee that it would not lead to additional traffic generation at some future time, perhaps through changed circumstances, with consequent adverse impact on highway safety." Yet here we are with a further 70 houses at Foxfields and Jude's Pond and a proposed 179 on these new sites, probably adding in excess of 500 vehicles to Haigh Moor Road.

There has been a water leak on HMR which despite being reported to Yorkshire Water is still flowing after 3 months and has now become 2 leaks. The western end of Westerton Road is in a dangerous state with potholes and speed restriction bumps. LCC appears to be unable to keep up with the maintenance of its roads in South Leeds.

LCC's attitude to this area seems to be that Ardsley is an outpost on the borders with Wakefield and Kirklees and beyond the borough or Morley, so we can be conveniently ignored. Ardsley is quite definitely being asked to provide the lion's share of new housing without any benefit, it has poor services and has become a dormitory area of Leeds.

The same concerns for the welfare of the wood apply to this site (This is an important buffer area to ensure adequate water supply to Haigh wood. Diverting rainwater from the wood could lead to the trees failing to thrive.). Access is via an existing development but leads on to Batley Road where sight lines are not good and the road is busy, especially at peak times. The local infrastructure is unable to cope with such an addition. The cumulative total of proposed new households is now 1234.

3373C -Where are the proposed access roads to this site? Hill Top Lane is totally inadequate to take traffic for an additional 144 properties. The junction with Batley Road is barely adequate for the existing properties (road widths/site lines ect) and would be unsuitable to receive extra traffic. What are the proposals to provide additional amenities such as school places, local health/doctors services and shops to cope with the extra homes.

3373C -

I am making my response by letter; the online boxes rejected my comments because they exceed 3,000 digits.

3373A Haigh Wood, West Ardsley, 3373C Haigh Wood, West Ardsley, 1336 Westerton Road, West Ardsley, 3456A Ardsley Reservoir, 1258 Westerton Road, Tingley, 3365 Westerton Road, Tingley, 1032 Bradford Road, 1143B & 1143D Thorpe Lane, Tingley.

Objections.

The Core Strategy seeks to be "fair". The word is used in paragraph 1.2 and again in 1.14. Yet the proposed green housing sites when taken together would definitely not be fair to West Ardsley and Tingley. No justification has been given as to why there is such a concentration here, nor any evidence of local need. Indeed, paragraph 4.6.14 states that "The SHMA 2011 was not able to identify any geographically specific need for new housing based on population growth." The 13 green housing sites in Ardsley and Tingley seem to have been assessed individually rather than their cumulative impact. This impact is potentially very much greater when considered alongside Kirklees Council's proposals for the Chidswell area, and comes on top of the huge impact on West Ardsley of major housing development in the 1990s - the estates now accessed by Lowry Road and Constable Road. The newly proposed sites taken together would consolidate semi-rural groups of settlements into a predominantly urban residential area. Most of the open frontages to Bradford Road and Westerton Road would be built on, removing open aspects and distant views and tending towards the creation of amorphous sprawl of development across the area along the length of the A650.

Site 3373C. Additional objections

1. Development of this site would be contrary to the following sections of the Council's policy SP1 in the Core Strategy:

SP1 (i) states: "Smaller Settlements will contribute to development needs, with the scale of growth having regard to the settlement's size, function and sustainability."

Site 3373C, with its estimated capacity of 144 dwellings, does not have regard to the size, function and sustainability of West Ardsley.

SP1 (iii) states: "For development to respect and enhance the local character and identity of places and neighbourhoods". The local character and identity of West Ardsley would be seriously threatened by 3373C, especially when combined with sites 3373A, 536, 3456A and 1336, and would make its component areas of Upper Green, Haigh Moor and Hill Top barely distinguishable from each other.

Three letters from the Planning Inspectorate were used in the Council's own evidence to the Unitary Development Plan public inquiry in 1995. In paragraph 39 of his report on the Morley Local Plan, the inspector considered that the planned development at Haigh Wood (site WA2H) would have a "very serious impact upon the character and environment of West Ardsley". He concluded in paragraph 10: "In the past, development in the Morley area would appear to have been sporadic and opportunist, placing the identity of the smaller settlements at risk and tending towards the creation of amorphous sprawl of development across the area along the length of the A650 Bradford to Wakefield road. In my view, the further diffusion of the existing loosely-knit settlement pattern should, as far as possible, be resisted."

Considering appeals in 1986 on 81/23/00212 and 81/23/00213 (broadly the same area as LDF sites 3373A/B/C and 1336) the inspector said "It would virtually eliminate the open centre and consolidate the semi-rural group of settlements into a predominantly urban residential area". This was endorsed in the Secretary of State's decision letter.

In 1994, a third inspector dismissed an appeal to develop land at Arthington Close near the the edge of Haigh Wood because it would "unacceptably erode the fringe of this rural area and would lead to pressure for further encroachment of residential development, most particularly in the fields to the west...". Although some years have passed since these decisions, the character and environment of the area are still semi-rural and just as delicate. When cogent arguments have been repeatedly made against development of the 3373 areas by the Secretary of State, by three planning inspectors and by Leeds Council itself (in evidence to the UDP inquiry), there can be no justification for sites 3373A, 3373C and 1336 being pursued for residential development in the LDF. They should instead be reclassified as "red" and withdrawn from consideration for development when producing the next stage of the plan.

2. Schools. Primary and secondary schools already full and difficult to expand further.

3. Agricultural land. Good quality agricultural land would be lost.

Representation ID: REP05648 Question Ref: H1

Local Development Framework, Site Allocations Plan, Public Consultation.

I am making my response by letter; the online boxes rejected my comments because they exceed 3,000 digits.

3373A Haigh Wood, West Ardsley, 3373C Haigh Wood, West Ardsley,
1336 Westerton Road, West Ardsley, 3456A Ardsley Reservoir,
1258 Westerton Road, Tingley, 3365 Westerton Road, Tingley,
1032 Bradford Road, 1143B & 1143D Thorpe Lane, Tingley.
Objections.

The Core Strategy seeks to be "fair". The word is used in paragraph 1.2 and again in 1.14. Yet the proposed green housing sites when taken together would definitely not be fair to West Ardsley and Tingley. No justification has been given as to why there is such a concentration here, nor any evidence of local need. Indeed, paragraph 4.6.14 states that "The SHMA 2011 was not able to identify any geographically specific need for new housing based on population growth." The 13 green housing sites in Ardsley and Tingley seem to have been assessed individually rather than their cumulative impact. This impact is potentially very much greater when considered alongside Kirklees Council's proposals for the Chidswell area, and comes on top of the huge impact on West Ardsley of major housing development in the 1990s - the estates now accessed by Lowry Road and Constable Road. The newly proposed sites taken together would consolidate semi-rural groups of settlements into a predominantly urban residential area. Most of the open frontages to Bradford Road and Westerton Road would be built on, removing open aspects and distant views and tending towards the creation of amorphous sprawl of development across the area along the length of the A650.

Site 3373C. Additional objections

1. Development of this site would be contrary to the following sections of the Council's policy SP1 in the Core Strategy:

SP1 (i) states: "Smaller Settlements will contribute to development needs, with the scale of growth having regard to the settlement's size, function and sustainability."

Site 3373C, with its estimated capacity of 144 dwellings, does not have regard to the size, function and sustainability of West Ardsley.

SP1 (iii) states: "For development to respect and enhance the local character and identity of places and neighbourhoods". The local character and identity of West Ardsley would be seriously threatened by 3373C, especially when combined with sites 3373A, 536, 3456A and 1336, and would make its component areas of Upper Green, Haigh Moor and Hill Top barely distinguishable from each other.

Three letters from the Planning Inspectorate were used in the Council's own evidence to the Unitary Development Plan public inquiry in 1995. In paragraph 39 of his report on the Morley Local Plan, the inspector considered that the planned development at Haigh Wood (site WA2H) would have a "very serious impact upon the character and environment of West Ardsley". He concluded in paragraph 10: "In the past, development in the Morley area would appear to have been sporadic and opportunist, placing the identity of the smaller settlements at risk and tending towards the creation of amorphous sprawl of development across the area along the length of the A650 Bradford to Wakefield road. In my view, the further diffusion of the existing loosely-knit settlement pattern should, as far as possible, be resisted."

Considering appeals in 1986 on 81/23/00212 and 81/23/00213 (broadly the same area as LDF sites 3373A/B/C and 1336) the inspector said "It would virtually eliminate the open centre and consolidate the semi-rural group of settlements into a predominantly urban residential area". This was endorsed in the Secretary of State's decision letter.

In 1994, a third inspector dismissed an appeal to develop land at Arthington Close near the the edge of Haigh Wood because it would "unacceptably erode the fringe of this rural area and would lead to pressure for further encroachment of residential development, most particularly in the fields to the west..."

Although some years have passed since these decisions, the character and environment of the area are still semi-rural and just as delicate.

When cogent arguments have been repeatedly made against development of the 3373 areas by the Secretary of State, by three planning inspectors and by Leeds Council itself (in evidence to the UDP inquiry), there can be no justification for sites 3373A, 3373C and 1336 being pursued for residential development in the LDF. They should instead be reclassified as "red" and withdrawn from consideration for development when producing the next stage of the plan.

3373A & 3373C - Green to Red

We object for the following reasons:

We live only 320 metres from Hill Top School, having moved here in November 2010 we have been unable to place our now 7 year old son at the school due to it being full. We have been at the top of the waiting list for several terms, but have been unable to get him into the school. We have also been unable to get our son into Westerton primary the 2nd nearest primary school. The only school that can be offered are poor performing schools out of the area. Where are additional families going to send their children to school - out of the area, driving them to school and increasing traffic! Access via Hill Top Lane will lead to a significant increase in traffic, the reason for moving to this area was to be away from traffic and to live somewhere where it is safe for children to play. Making Hill Top Lane a through road would not be safe for young children.

At the junction at the end of Hill Top Lane it is already extremely difficult to turn right onto Batley Road, this is due to Batley Road already carrying heavy traffic, there is a blind corner and hill to the right and there are always cars parked opposite the junction meaning that you have to drive on the wrong side of the road round a corner meeting the brow of a hill.

Turning right out of Hill Top Grove onto Hill Top Lane has very poor visibility due to a large tree, increased traffic will cause difficulty in safely turning right onto Hill Top Lane. West Ardsley is a sleepy village with very little other than housing and woodland in the area. People live here in order to enjoy the surrounding countryside and woodland and the wildlife it has to offer. Not only will building in the area destroy the enjoyment residents have in the countryside and wildlife, but as there is so little in the area to do i.e. Healthcare, Shops, Parks, Fitness, Children's Entertainment, any new houses would lead to increased traffic as residents have to drive to find these things.

As an example our closest doctors surgery is at East Ardsley 2 miles drive from our home. To book an appointment, there is generally a 2 week wait just to get a routine appointment. What is proposed to cope with the additional demand on doctors surgeries and health services or will we now need to wait several more weeks just to get a routine appointment?

The wildlife in the area is quite special, we regularly have Jays visiting our garden, quite rare for these shy birds. There are many, many different species of birds in the areas, hedgehogs, foxes, what is proposed to protect these creatures?

In summary the residents of West Ardsley live here purely to enjoy wildlife, countryside, lack of traffic and tolerate the fact that they must travel out of the area for everything including for ourselves a school! To remove the wildlife, countryside and increase traffic and number of residents WOULD RUIN THIS AREA AND THE LIVES OF THE RESIDENTS!

3373A / 3373C -

We are disgusted that as residents who live directly adjacent to 3373C we received no notification of these proposals and it was down to a neighbour who called at our house yesterday to make us aware and also that the closing date for submitting comments is Monday 29th July!

We object for the following reasons:

We live only 320 metres from Hill Top School, having moved here in November 2010 we have been unable to place our now 7 year old son at the school due to it being full. We have been at the top of the waiting list for several terms, but have been unable to get him into the school. We have also been unable to get our son into Westerton primary the 2nd nearest primary school. The only school that can be offered are poor performing schools out of the area. Where are additional families going to send their children to school - out of the area, driving them to school and increasing traffic!

Access via Hill Top Lane will lead to a significant increase in traffic, the reason for moving to this area was to be away from traffic and to live somewhere where it is safe for children to play. Making Hill Top Lane a through road would not be safe for young children.

At the junction at the end of Hill Top Lane it is already extremely difficult to turn right onto Batley Road, this is due to Batley Road already carrying heavy traffic, there is a blind corner and hill to the right and there are always cars parked opposite the junction meaning that you have to drive on the wrong side of the road round a corner meeting the brow of a hill.

Turning right out of Hill Top Grove onto Hill Top Lane has very poor visibility due to a large tree, increased traffic will cause difficulty in safely turning right onto Hill Top Lane.

West Ardsley is a sleepy village with very little other than housing and woodland in the area. People live here in order to enjoy the surrounding countryside and woodland and the wildlife it has to offer.

Not only will building in the area destroy the enjoyment residents have in the countryside and wildlife, but as there is so little in the area to do i.e. Healthcare, Shops, Parks, Fitness, Children's Entertainment, any new houses would lead to increased traffic as residents have to drive to find these things.

As an example our closest doctors surgery is at East Ardsley 2 miles drive from our home. To book an appointment, there is generally a 2 week wait just to get a routine appointment. What is proposed to cope with the additional demand on doctors surgeries and health services or will we now need to wait several more weeks just to get a routine appointment?

The wildlife in the area is quite special, we regularly have Jays visiting our garden, quite rare for these shy birds. There are many, many different species of birds in the areas, hedgehogs, foxes, what is proposed to protect these creatures?

In summary the residents of West Ardsley live here purely to enjoy wildlife, countryside, lack of traffic and tolerate the fact that they must travel out of the area for everything including for ourselves a school! To remove the wildlife, countryside and increase traffic and number of residents WOULD RUIN THIS AREA AND THE LIVES OF THE RESIDENTS!

3373C – This is a valuable green space with access to Haigh Wood. It should be protected as countryside. Also the number of houses planned would overwhelm the area.

Representation ID: REP04315 Question Ref: H2

3373C – This land should be green belt not just open land together with sites 3373A / B it forms a valuable green space for residents of West Ardsley / Tingley and access to Haigh Wood.

Also the extra 144 houses would generate a high volume of extra traffic onto already busy (for small roads) Haigh Moor and Westerton Road.

3373C Haigh Wood S, West Ardsley, Site Capacity 144, Ward Ardsley & Robin Hood

The same concerns for the welfare of the wood apply to this site (This is an important buffer area to ensure adequate water supply to Haigh wood. Diverting rainwater from the wood could lead to the trees failing to thrive.). Access is via an existing development but leads on to Batley Road where sight lines are not good and the road is busy, especially at peak times. The local infrastructure is unable to cope with such an addition. The cumulative total of proposed new households is now 1234.

I think it is disgusting that the council are wanting to build on greenbelt land on proposed Plots 1336, 3373, 3372, 3373A, 3373B, 3373C, 1330B, 1330A, 536. And 3456A. It is an area of outstanding beauty where people enjoy walking, running, playing and riding horses. Many wild animals live in the fields and to take it away would turn this area into a concrete jungle. It would mean my view at the back would be eradicated, lowering the value of my house, but more importantly the pleasure I have everyday when I look across the field. This city needs green areas where we can walk and get away from the stresses of life. Also, to the rear of my property there is bindweed in the field which I believe would make it difficult for any developers to be able to build on that land. There are plenty of brown field sites which can be developed. Do not take away our green spaces. Totally outrageous.

New housing developments already under way on Haigh Moor Road. Further development will create increased access problems for traffic.-I have concerns about road safety due to the increased level of traffic that will arise and access roads through current housing developments will put children in particular at risk.-Schools in the immediate vicinity are generally full. Where will extra children go.-Local doctors already been extended substantially in recent years to deal with increased population. Further housing development will only increase pressure on this resource.-It will be the loss of a local amenity enjoyed by many-Wildlife is plentiful in this area and adds to the enjoyment of many as well as providing habitat to animals and birds. Numerous bats can be seen in the area on an evening, these will be lost

Representation ID: REP01153 Question Ref: H7

Maintain green belt land but also development of this area would be difficult, costly and unpractical due to gradient of land

Representation ID: REP01159 Question Ref: H1

We live only 320 metres from Hill Top School, having moved here in November 2010 we have been unable to place our now 7 year old son at the school due to it being full. We have been at the top of the waiting list for several terms, but have been unable to get him into the school. We have also been unable to get our son into Westerton primary the 2nd nearest primary school. The only school that can be offered are poor performing schools out of the area. Where are additional families going to send their children to school - out of the area, driving them to school and increasing traffic! Access via Hill Top Lane will lead to a significant increase in traffic, the reason for moving to this area was to be away from traffic and to live somewhere where it is safe for children to play. Making Hill Top Lane a through road would not be safe for young children. At the junction at the end of Hill Top Lane it is already extremely difficult to turn right onto Batley Road, this is due to Batley Road already carrying heavy traffic, there is a blind corner and hill to the right and there are always cars parked opposite the junction meaning that you have to drive on the wrong side of the road round a corner meeting the brow of a hill. Turning right out of Hill Top Grove onto Hill Top Lane has very poor visibility due to a large tree, increased traffic will cause difficulty in safely turning right onto Hill Top Lane. West Ardsley is a sleepy village with very little other than housing and woodland in the area. People live here in order to enjoy the surrounding countryside and woodland and the wildlife it has to offer. Not only will building in the area destroy the enjoyment residents have in the countryside and wildlife, but as there is so little in the area to do i.e. Healthcare, Shops, Parks, Fitness, Children's Entertainment, any new houses would lead to increased traffic as residents have to drive to find these things. As an example our closest doctors surgery is at East Ardsley 2 miles drive from our home. To book an appointment, there is generally a 2 week wait just to get a routine appointment. What is proposed to cope with the additional demand on doctors surgeries and health services or will we now need to wait several more weeks just to get a routine appointment? The wildlife in the area is quite special, we regularly have Jays visiting our garden, quite rare for these shy birds. There are many, many different species of birds in the areas, hedgehogs, foxes, what is proposed to protect these creatures? In summary the residents of West Ardsley live here purely to enjoy wildlife, countryside, lack of traffic and tolerate the fact that they must travel out of the area for everything including for ourselves a school! To remove the wildlife, countryside and increase traffic and number of residents WOULD RUIN THIS AREA AND THE LIVES OF THE RESIDENTS!

Map 33 site 3373 A & C

Representation ID: REP01159 Question Ref: H2

Map 33 Site 3373 A & C The reason is given above, however summarised as: Access & Road Safety Issues from Hill Top Grove onto Hill Top Lane and from Hill Top Lane onto Batley Road. Increase traffic to an area not designed for traffic, some streets do not even have a pavement! Lack of schools and healthcare in the area to cope with existing demand. Wildlife and Countryside is the only thing West Ardsley has to offer and the only reason people choose to live here. Building on the green areas will ruin the area and the lives of residents.

Name: Stephen Wild

Representor No: PRS03279

Representation ID: REP00620 Question Ref: H2

3373C. This is a green field site. It is, physically, green fields. Access will not be sufficient if it is intended to use Hill Top Lane, which is already congested with resident parking. Local schools are already full, and services for local residents (shops etc) are poor - additional housing will not help. The distinction between 3373C and 3373B seems arbitrary: in open character of the countryside around Haigh Wood is part of the landscape as much worth preserving as the woods themselves.

Name: Michael Short

Representor No: PRS03336

Representation ID: REP00155 Question Ref: H2

3373A: suggested access via narrow, badly designed estate roads which are about adequate to service the existing housing. The site, in parts, is probably not economical to develop (topography, drainage, old mines etc). Will entail removal of many trees which form part of a pleasant, wooded local amenity. If developed, the character of this space (a quiet valley) will be ruined. Applying to 3373A and also 3373C, 1336 and 1337: Local roads already saturated, no places in schools or GPs, massive development will ruin the village; feel of the area.

Site Comments - Outer South West

Housing

Haigh Wood, Ardsley

Name: Richard Sagar

Representor No: PRS03405

Representation ID: REP01941 Question Ref: H1

Whilst we are in broad agreement with the designation of green sites at Haigh Wood in the Outer South West area of Leeds, we have concerns regarding the boundaries between the "green" and "red" sites. We agree with and support the allocation of land at Haigh Wood for housing with a central area in the vicinity of Haigh Wood LNA left undisturbed, but feel that this primary objective can be better achieved with different boundaries to sites 3373A, 3373B, 3373C and 1336

Representation ID: REP01941 Question Ref: H3

As a corollary to the explanation provided at H2 and in the attached document, we suggest that parts of site 3373B be re-designated as green, in accordance with Figure 6 and Appendix 1 of that document. These sections are in areas which are not needed to be kept undeveloped for the preservation of the green corridor between the two development parcels. New access points, via Upper Green Avenue/Upper Green Way and a new junction onto Westerton Road will facilitate improved integration into the transport network. As mentioned above, the alignment of site 3373B would be more logical if it followed the suggested revised indicative masterplan included in the attached document (at Figure 6 and Appendix 1). The green corridor will be further protected by the removal of the previously suggested vehicular link road between the two parts of the Haigh Wood site. The new alignment will preserve the vast majority of the hedges and existing trees on the site, whilst allowing a more logical and achievable layout for future development. Additionally, no development is proposed within the vicinity of the LNA or the stream running down the valley.

Representation ID: REP01941 Question Ref: H8

As explained at H3 and in the attached documents, we believe that sections of site 3337B should be re-designated as green, instead of parts of site 1336 and 3373A.

Representation ID: REP01941 Question Ref: H9

As explained at H2 and in the attached documents, we suggest that parts of sites 1336 and 3373A would be more suitable for colour coding as red, whilst parts of site 3373B should be green.

Representation ID: REP01941 Question Ref: H11

The suggested revised allocations at Haigh Wood (see Figure 6 and Appendix 1 of the attached document) ("green" land) are all suitable for short term delivery.

Representation ID: REP01941 Question Ref: H2

We agree with the Council that the central valley at Haigh Wood should be excluded from development, as a green corridor between proposed development sites. This was the Council's intention in designating site 3373B as red. However, the alignment of the valley suggested by site 3373B does not accurately reflect the topography of the area, the trees, the stream and the LNA and how these will affect potential development, nor does it align with what we suggest is the true extent of the central valley. We therefore suggest that sections of sites 3373A and 1336 be re-designated as red, in accordance with the attached documents (Document for Residential and Open Space Allocation Addendum dated July 2013, in particular Figure 6 and Appendix 1, and the covering letter) outlining the detailed justification for our proposed new alignment for the central valley. The sections of sites 3373A and 1336 which we suggest are re-designated as red are not suitable for development, as they incorporate important arboricultural features which will be difficult to incorporate into a housing development and are best left as part of the green corridor between the two development parcels. Conversely, parts of site 3373B should be added as green, not red, for similar reasons, but in reverse; the area can be developed without harm to what is sought to be protected, as further explained below.

Name: Stephen Bartlett

Representor No: PRS03513

Representation ID: REP01397 Question Ref: H2

3373A, 3373C and 536. If you go ahead and build on these sites, it has been stated that Haigh wood would act as a pleasant area of "green belt" for recreational purposes. The area of wood that you are talking about is barely wider than 100m and probably no longer than 500m in length!! The other reasons I have given in detail above in that I am worried this area is going to become an urban sprawl, with no parkland (albeit we have the reservoir) designated anywhere. Small thin strips of land between developments are not my idea of recreational areas - if you develop this area, then I believe you should be looking at putting in areas similar to Middleton or Roundhay park. I also don't agree with your assessment of site 1135 off Dewsbury road. Your statement should say - too costly for any developer to clear the station area, therefore not a viable proposition!!! Yes we all know it's far easier to pick a nice green field, scrape off the top soil, lay foundations, and build (for maximum profit)

Question Ref: General comment

Site 3373C Objections1. Local character and identityDevelopment of this site would be contrary to the following sections of the Council's policy SP1 in the Core Strategy:1. SP1 (i) states: "Smaller Settlements will contribute to development needs, with the scale of growth having regard to the settlement's size, function and sustainability." Site 3373A, with its estimated capacity of 130 dwellings, does not have regard to the size, function and sustainability of West Ardsley.SP1 (iii) states: "For development to respect and enhance the local character and identity of places and neighbourhoods". The local character and identity of West Ardsley would be seriously threatened by 3373a, 3373C and 1336, and would make its component areas of Upper Green, Haigh Moor and Hill Top barely distinguishable from each other.My view accords with three decision letters from the Planning Inspectorate which were used in the Council's own evidence to the Unitary Development Plan public inquiry in 1995. In paragraph 39 of his report on the Morley Local Plan, the inspector considered that the planned development at Haigh Wood (site WA2H) would have a "very serious impact upon the character and environment of West Ardsley". He concluded in paragraph 10: "In the past, development in the Morley area would appear to have been sporadic and opportunist, placing the identity of the smaller settlements at risk and tending towards the creation of amorphous sprawl of development across the area along the length of the A650 Bradford to Wakefield road. In my view, the further diffusion of the existing loosely-knit settlement pattern should, as far as possible, be resisted."Considering appeals in 1986 on 81/23/00212 and 81/23/00213 (broadly the same area as LDF sites 3373A/B/C and 1336) the inspector said "It would virtually eliminate the open centre and consolidate the semi-rural group of settlements into a predominantly urban residential area". This was endorsed in the Secretary of State's decision letter.In 1994, a third inspector dismissed an appeal to develop land at Arthington Close near the the edge of Haigh Wood because it would "unacceptably erode the fringe of this rural area and would lead to pressure for further encroachment of residential development, most particularly in the fields to the west..."Although some years have passed since these decisions, the character and environment of the area are still semi-rural and just as delicate. When cogent arguments have been repeatedly made against development of the 3373 areas by the Secretary of State, by three planning inspectors and by Leeds Council itself (in evidence to the UDP inquiry), there can be no justification for sites 3373A, 3373C and 1336 being pursued for residential development in the LDF. They should instead be reclassified as "red" and withdrawn from consideration for development when producing the next stage of the plan.2. Damage to Haigh Wood and Baghill beck valleyDevelopment of this site would be contrary to the Council's policy P12 in the Core Strategy:"The character, quality and biodiversity of Leeds' townscapes and landscapes, including their historical and cultural significance, will be conserved and enhanced to protect their distinctiveness through stewardship and the planning process." The secluded Haigh Wood valley comprises the central portion of site 3373A, including part of the wood covered by a Tree Preservation Order. Residential development would prejudice the objectives underlining this policy as set out in paragraphs 5.3.46 to 5.3.48 of the Core Strategy including: "The Council seeks to protect and enhance the varied landscapes of Leeds and the assets they contain, from valued local trees, the countryside to nationally designated landscape, fauna and flora". This view was endorsed by three planning inspectors and again in the Council's evidence, given by Mr G B Andrews, at the UDP inquiry. In his paragraph 4.3.6, Mr Andrews stated: I refer to the conclusions reached by the inspectors at the two subsequent appeal cases in 1985 and 1994. In each case it is acknowledged that the Haigh Wood area is of value as an area of attractive open farmland with a rural character and provides an important amenity in the local area". Even the Council's own assessment for the LDF states that the site is: "Not supported (RED). This site includes Haigh Wood and Baghill Beck Local Nature Area which fall under UK Biological Action Plan priority habitats - a mixture of woodland, scrub and grassland habitats alongside Baghill Beck. There are a number of wide hedgerow/woodland belts throughout the site that provide a valuable habitat. Water vole has been recorded on the Hey Beck. The Baghill Beck flows into this water course and could support this species. Bats to consider."3. FairnessThe Core Strategy seeks to be "fair". The word is used in paragraph 1.2 and again in 1.14. Yet the proposed green housing sites when taken together would definitely not be fair to West Ardsley and Tingley. No justification has been given as to why there is such a concentration here, nor any evidence of local need. Indeed, paragraph 4.6.14 states that "The SHMA 2011 was not able to identify any geographically specific need for new housing based on population growth." The sites seem to have been assessed individually rather than their cumulative impact. This impact is potentially very much greater when considered alongside Kirklees Council's proposals for the Chidswell area. 4. Highway access The Upper Green culs-de-sac and Hill Top Lane cul-de-sacs are not suitable to serve more houses. They would become much less safe for children to play in and the already severe dangers at school times would be exacerbated.5. SchoolsPrimary and secondary schools already full and difficult to expand further.6. Agricultural landGood quality agricultural land would be lost.7. ViabilityExtra costs from: a. parts of 3373A and 3373C have serious levels problems and look undevelopable; b. bell pits known to exist in the area from former mining; c. elimination of Japanese Knotweed.The site on Westerton Road from Regency Gardens to Westerton Wood if developed will see 117 new homes - this land is currently classed as green belt (site 3365 = 83 homes and site 1258 = 34 homes) development here will represent a major incursion into the Green belt and will create further pressure on Ardsley reservoir as a local beauty spot. Development of sites 3365 and 1258 will result in the loss of valuable agricultural land, there are a number of wide hedgerow and woodland belts throughout the site that provide a valuable habitat for wildlife in particular bats. Development of the sites on Westerton Road will result in the amorphous sprawl of development across the area along the whole length of the Westerton Road.Site 1330B is an extension of the building that is currently ongoing adjacent to Jude's pond - and is for a further 32 houses ! This site has major highways access issues and has less than the recommended visibility splay for highways safety - further development of this site will exasperate current problems regarding drainage on the land - Haigh Moor Road residents already have to deal with flooding of the pavements and highways in the vicinity of Jude's pond. 464 houses in such a small vicinity is unsustainable, there are currently just over 300 pupils at Hill Top Primary School with no room for any expansion, the school is full and the same is true of Westerton which as you know was a small village school 20 years ago but is now one of the biggest primary schools in the Leeds district and all because of the amount of building that has taken place over recent years.Leeds City Council have in their allocation plan confirmed that Ardsley and Robin Hood have a deficiency in parks and gardens (the only area in Leeds South West to be deficient) - our children already have very little designated play areas, they have also confirmed that we are deficient in outdoor sports areas and facilities for children to play. We have however got a surplus of natural green space which is currently under threat of housing - if this natural greenspace is to be used for any purpose, surely it should be used to reduce the deficit and improve our community. Further reduction of amenity greenspace in an area which is seeing more and more housing development is unfair and unsustainable.Our GP surgeries are at breaking point with current waiting times for appointments being in excess of two weeks, the surgery at Leigh View was recently extended and it's difficult to envisage how this could be extended further to serve the population boom that will ensue if all these sites are developed.Further erosion of the demarcation between West Ardsley & Tingley - soon the two settlements will merge into one and West Ardsley as a separate community will be subsumed into its near neighbour, the two areas will be barely distinguishable from each other which is contrary to the Councils policy SP1 which clearly states smaller Settlements will contribute to development needs, with the scale of growth having regard to the settlement's size, function and sustainability. If these plans were approved it will no doubt result in urban sprawl with no identifiable boundaries.Our fields provide a public amenity for dog-walkers, cyclists, ramblers and local residents alike and It would virtually eliminate the open centre and consolidate the semi-rural group of settlements into a predominantly urban residential area". This view was endorsed by the Secretary of State in their past decision letter.Our road network was not built to support the existing volume of traffic , we do not have the infrastructure to support development of this scale, our public transport links are very poor with only one bus an hour into Leeds, the only viable means of transportation is by car which will have a cumulative impact on the A650 and A653 which are already congested.

Objections to 3373a and 3373cDevelopment of these sites would be contrary to SP1 in the Core Strategy:SP1 (i) No regard to the size, function and sustainability of West Ardsley.SP1 (iii) The local character and identity of West Ardsley would be seriously threatened by 3373A, 3373C and 1336, and would make the areas of Upper Green, Haigh Moor and Hill Top undistinguishable from each other. Three decision letters from the Planning Inspectorate which were used in the Council's own evidence to the UDP in 1995. In paragraph 39 of his report he considered the planned development concluding "In the past, development in the Morley area would appear to have been sporadic and opportunist, placing the identity of the smaller settlements at risk and tending towards the creation of amorphous sprawl of development across the area along the length of the A650.In my view, the further diffusion of the existing loosely-knit settlement pattern should be resisted."Appeals in 1986 on 81/23/00212 and 81/23/00213 the inspector said "It would virtually eliminate the open centre and consolidate the semi-rural group of settlements into a predominantly urban residential area". This was endorsed in the Secretary of State's decision letter.When cogent arguments have been repeatedly made against development of the 3373 areas by the Secretary of State, by three planning inspectors and by Leeds Council itself (in evidence to the UDP inquiry), there can be no justification for sites 3373A, 3373C and 1336 being pursued for residential development in the LDF. They should instead be reclassified as "red" Development of these sites would be contrary to the Council's policy P12 in the Core Strategy: The secluded Haigh Wood valley comprises the central portion of site 3373A, including part of the wood covered by a Tree Preservation Order. Residential development would prejudice the objectives underlining this policy as set out in paragraphs 5.3.46 to 5.3.48 of the Core Strategy.

I particularly disagree with site 3373C as new roads could cause the current cul-de-sac design to become a rat run; the roads are not sufficient to cope.Finally, there will be a great loss of amenities to local people, damage to wild life in Haigh Moor Wood and the effect on property values of existing homes.Having lived on Hill Top Estate for over 25 years, I am concerned these plans will affect the friendly village ethos and community spirit.

Site Reference MAP 33, 3373 A-C.Access problems by increased road traffic to Hill Top Lane/Batley Road.Road safety concerns as access to site is close to primary school and on a bad bend. Access also affected by parked vehicles outside residences directly opposite Hill Top Lane.Ability of local services to cope with extra residents attending local schools and doctors surgeries; personal experience over last six years of just getting a routine doctors appointment has gone from two days to two weeks, due to previous developments in the area.Loss of these areas reduces public access to less formal recreational space and traffic free footpaths.These developments would undoubtedly have an impact on the local wildlife in Haigh Moor Wood.(eg.Bats).

Hill Top Lane is a lane not a wide road and would not be able to take the traffic for another 120 houses, the schools are all over full children are having to travel out of the area. wildlife , bats etc would be affected in the close by woods, walkers would not have the amenity anymore, the doctors surgery cannot handle the patients they have now with sometimes 3 weeks waiting for an appointment, road safety is a major concern as school time is a nightmare on Hill top lane with double parked cars already. Even if another exit on to Haig moor rd were to be made that in itself would cause even more problems as Haig more rd is constantly full of parked cars on both sides and a real hazard to negotiate. we are not talking about a small number of homes which would probably be ok but the amount of homes is far beyond the amount that the area can accomodate, I strongly disagree with any building on this field [x]

sites 3365,1258 & 3373c Sites 3365 & 1258 are on green belt land & will also spoil Ardsley reservoir which is a local beauty spot used by many local people myself included as I walk round it almost every day, It is also used by lots of other people for leisure activities such as walking clubs It will also result in a loss of agricultural land & valuable hedgerows. Site 3373c Has insufficient highways infrastructure for yet another 144 houses & would mean that Tingley & West Ardsley could no longer remain as separate villages & the communities would lose one of its last valuable open sites for outdoor enjoyment.

Representor No: PRS04274

Representation ID: REP01764 Question Ref: G1

The suggestion to develop the area around Haigh Wood in West Ardsley is detrimental to the wood. This is a natural bluebell wood which is rare in this area. Increasing housing in close proximity will destroy the natural habitat. The area around West Ardsley reservoir is a prime example of over use by the local population and as such access will probably have to be closed due to damage. The same thing will happen to the wood as there will be even less greenspace for leisure. Part of the area is also covered by a mediaeval charter to allow Lee Fair to meet on the land yearly.

Name: Michael Bramley

Representor No: PRS04350

Representation ID: REP01455 Question Ref: H1

The areas 3373c & 3373a are not suitable for housing the area contains a large amount of bat colonies and the area is regarded by locals as a natural beauty spot with woods and fields that are a pleasure to share with the community. There are no services in West Ardsley to support a larger community, the junior school is not large enough, there is no shop and one postbox in the village even the village shop converted into flats 5 years ago. Batley Road, the road servicing West Ardsley already is used as a rat run between Dewsbury, Batley and Wakefield and nothing has been done to calm traffic and more housing would add to this. Additionally, road access to the areas would appear to be via the road Hill Top Lane. This road is not really designed or suitable as a major road artery. Hill Top Lane is regularly congested during start of school and end of school day as it is used as drop-off zone by parents, as the previously described Batley Road is too busy. This congestion is despite the local school having a car park and drop off area. Additional housing in the area will add to the congestion - both to the community and the ability for the local school to accommodate the additional child population.

Representation ID: REP01455 Question Ref: H5

As previously described 3373a & 3373c

Representation ID: REP01455 Question Ref: H2

We strongly disagree with the green belt of 3373c and 3373a being considered for housing because it will effect the natural beauty of this area, a main reason we moved here from Tingley which was allowed to over develop. We have observed the impact of overdevelopment where a large number of residential homes has a small amount of services (shops etc.) Our previous observations highlighted that in singular retail area, particularly at dusk, gets utilised by the local youngsters as a hang out as there is no where else to go - and resulting in a number of threatening and anti-social behaviour. The local area is used heavily by families as an area for taking walks - simply due to the fact that this is the ONLY safe area without using transport in the immediate district. Equally, 3373A hosts a long standing traditional event (100s years) called the the LeeFair horse show. From our own person perspective - our property overlooks 3373C and this vista presents a value-add to our property. Our property is situated on Hill Top Lane. The proposed development will have a double impact on reducing the value of our property - Hill Top Lane will become a main road rather than a quiet cul-de-sac. And the Vista our property currently enjoys will be taken away and enjoyed by the new development - this impact could be many 10's of thousands pounds in value loss

3373a and c -long term -preferable never

Representation ID: REP00325 Question Ref: H2

Sites: 3373a and 3373c (agree 3373b should be red) Also query 536. With sites 3373a and c I am concerned about the access - if Hill Top Lane is used the road isn't wide and the junction with Batley Road has long been a concern. Cars park directly opposite the junction (terraced houses no drives) and on both sides of Hill Top Lane - especially of concern is school pick up and drop off parking - I am surprised there hasn't been a serious accident with children from Hill Top School and speed is also a concern. If more traffic on the road accessing or cutting through the risk is so much greater. The houses were built with covenants against hedges etc to preserve sight lines.

Representation ID: REP01205 Question Ref: H2

3373C I am concerned about: 1. Access to the site, the junction of Hill Top Lane and Batley Road is already very busy and dangerous at school times. Added traffic would make it even worse. 2. I have neighbours who are already struggling to get their children into Hill Top School. More houses will exacerbate the problem. Just how close do you have to live to the school to get your child a place? 3. The field is often used by dog walkers and children. Losing this amenity would be bad for the village. 4. There is lots of wildlife in the area which would be damaged with building on the site. Bats are regularly seen around the houses in the locality. 5. Increased noise on Hill Top Lane is of concern, the Lane was not designed to take huge amounts of traffic is totally unsuitable.

Name: Samantha Halls

Representor No: PRS04583

Representation ID: REP00646 Question Ref: H1

1. Local character and identity/Development of site would be contrary to the following sections of the Council's policy SP1 in the Core Strategy: - Site 3373A, with its estimated capacity of 130 dwellings, does not have regard to the size, function and sustainability of West Ardsley. SP1 (iii) states: "For development to respect and enhance the local character and identity of places and neighbourhoods". The local character and identity of West Ardsley would be seriously threatened by 3373A, especially when combined with sites 3373C and 1336, and would make its component areas of Upper Green, Haigh Moor and Hill Top barely distinguishable from each other. My view accords with three decision letters from the Planning Inspectorate which were used in the Council's own evidence to the Unitary Development Plan public inquiry in 1995. In paragraph 39 of his report on Morley Local Plan, the inspector considered the planned development at Haigh Wood (site WA2H) would have a "very serious impact upon the character and environment of West Ardsley". He concluded paragraph 10: "In the past, development in the Morley area would appear to have been sporadic and opportunist, placing smaller settlements at risk and tending towards the creation of amorphous sprawl of development across the area along the length of the A650 Bradford to Wakefield road. In my view, the further diffusion of the existing loosely-knit settlement pattern should, as far as possible, be resisted." Considering appeals in 1986 on 81/23/00212 and 81/23/00213 (broadly the same area as LDF sites 3373A/B/C and 1336) the inspector said "It would virtually eliminate the open centre and consolidate the semi-rural group of settlements into a predominantly urban residential area". This was endorsed in the Secretary of State's decision letter. In 1994, a third inspector dismissed an appeal to develop land at Arthington Close near the edge of Haigh Wood because it would "unacceptably erode the fringe of this rural area and lead to pressure for further encroachment of residential development, particularly in the fields to the west...". Although some years ago these decisions, the character and environment of the area are still semi-rural and just as delicate. When cogent arguments have been repeatedly made against development of the 3373 areas by the Secretary of State, by three planning inspectors and by Leeds Council itself (in evidence to the UDP inquiry), there can be no justification for sites 3373A, 3373C and 1336 being pursued for residential development in the LDF. They should instead be reclassified as "red" and withdrawn from consideration for development when producing the next stage of the plan. 2. Damage to Haigh Wood and Baghill beck valley - Development of this site would be contrary to the Council's policy P12 in the Core Strategy:

Representation ID: REP00646 Question Ref: H2

I DISAGREE WITH SITES 3373A, 3373C and 1336 3. Fairness The Core Strategy seeks to be "fair". The word is used in paragraph 1.2 and again in 1.14. Yet the proposed green housing sites when taken together would definitely not be fair to West Ardsley and Tingley. No justification has been given as to why there is such a concentration here, nor any evidence of local need. Indeed, paragraph 4.6.14 states that "The SHMA 2011 was not able to identify any geographically specific need for new housing based on population growth." The sites seem to have been assessed individually rather than their cumulative impact. This impact is potentially greater when considered alongside Kirklees proposals for Chidswell 4. Highway access - The Upper Green culs-de-sac are not suitable to serve up to 130 more houses. They would become much less safe for children to play in and already severe dangers at school times would be exacerbated. 5. Schools - already full and difficult to expand further. 6. Agricultural- land good quality agricultural land would be lost. 7. Viability - costs from: a. parts of 3373A have serious levels problems and look undevelopable; b. bell pits known to exist in the area from former mining; c. elimination of Japanese Knotweed.

Representation ID: REP01649 Question Ref: H9

3373c - proximity to protected wildlife on site 3373b and serious access and highways issues.

Representation ID: REP01649 Question Ref: H11

Irrelevant as site 3373 c should not be developed at all.

Representation ID: REP01649 Question Ref: H2

3373 a-c. Particularly site C at the top of hill top lane, through which access would be fed. This leads off Batley road which is very dangerous already, especially during school start and finish times when traffic is increased. The addition of 144 houses, minimum 2 cars per house, would be hugely detrimental to road safety and heighten risk. In addition capacity of local amenities such as schools to cope is questionable. There has been considerable building of housing in recent years, and still continuing, but no increase in capacity of amenities. Site A has comments regarding wildlife in Haigh wood, and these comments should also apply to site C, particularly bats which fly regularly across site c.

Representation ID: REP05653 Question Ref: H1

Site 3373A. Objections

1. Local character and identity

Development of this site would be contrary to the following sections of the Council's policy SP1 in the Core Strategy:

1. SP1 (i) states: "Smaller Settlements will contribute to development needs, with the scale of growth having regard to the settlement's size, function and sustainability."

Site 3373A, with its estimated capacity of 130 dwellings, does not have regard to the size, function and sustainability of West Ardsley.

SP1 (iii) states: "For development to respect and enhance the local character and identity of places and neighbourhoods". The local character and identity of West Ardsley would be seriously threatened by 3373A, especially when combined with sites 3373C and 1336, and would make its component areas of Upper Green, Haigh Moor and Hill Top barely distinguishable from each other.

My view accords with three decision letters from the Planning Inspectorate which were used in the Council's own evidence to the Unitary Development Plan public inquiry in 1995. In paragraph 39 of his report on the Morley Local Plan, the inspector considered that the planned development at Haigh Wood (site WA2H) would have a "very serious impact upon the character and environment of West Ardsley". He concluded in paragraph 10: "In the past, development in the Morley area would appear to have been sporadic and opportunist, placing the identity of the smaller settlements at risk and tending towards the creation of amorphous sprawl of development across the area along the length of the A650 Bradford to Wakefield road. In my view, the further diffusion of the existing loosely-knit settlement pattern should, as far as possible, be resisted." Considering appeals in 1986 on 81/23/00212 and 81/23/00213 (broadly the same area as LDF sites 3373A/B/C and 1336) the inspector said "It would virtually eliminate the open centre and consolidate the semi-rural group of settlements into a predominantly urban residential area". This was endorsed in the Secretary of State's decision letter.

In 1994, a third inspector dismissed an appeal to develop land at Arthington Close near the the edge of Haigh Wood because it would "unacceptably erode the fringe of this rural area and would lead to pressure for further encroachment of residential development, most particularly in the fields to the west...".

Although some years have passed since these decisions, the character and environment of the area are still semi-rural and just as delicate. When cogent arguments have been repeatedly made against development of the 3373 areas by the Secretary of State, by three planning inspectors and by Leeds Council itself (in evidence to the UDP inquiry), there can be no justification for sites 3373A, 3373C and 1336 being pursued for residential development in the LDF. They should instead be reclassified as "red" and withdrawn from consideration for development when producing the next stage of the plan.

2. Damage to Haigh Wood and Baghill beck valley

Development of this site would be contrary to the Council's policy P12 in the Core Strategy:

"The character, quality and biodiversity of Leeds' townscapes and landscapes, including their historical and cultural significance, will be conserved and enhanced to protect their distinctiveness through stewardship and the planning process." The secluded Haigh Wood valley comprises the central portion of site 3373A, including part of the wood covered by a Tree Preservation Order. Residential development would prejudice the objectives underlining this policy as set out in paragraphs 5.3.46 to 5.3.48 of the Core Strategy including: "The Council seeks to protect and enhance the varied landscapes of Leeds and the assets they contain, from valued local trees, the countryside to nationally designated landscape, fauna and flora".

This view was endorsed by three planning inspectors and again in the Council's evidence, given by Mr G B Andrews, at the UDP inquiry. In his paragraph 4.3.6, Mr Andrews stated: I refer to the conclusions reached by the inspectors at the two subsequent appeal cases in 1985 and 1994. In each case it is acknowledged that the Haigh Wood area is of value as an area of attractive open farmland with a rural character and provides an important amenity in the local area". Even the Council's own assessment for the LDF states that the site is: "Not supported (RED). This site includes Haigh Wood and Baghill Beck Local Nature Area which fall under UK Biological Action Plan priority habitats - a mixture of woodland, scrub and grassland habitats alongside Baghill Beck. There are a number of wide hedgerow/woodland belts throughout the site that provide a valuable habitat. Water vole has been recorded on the Hey Beck. The Baghill Beck flows into this water course and could support this species. Bats to consider."

3. Fairness

The Core Strategy seeks to be "fair". The word is used in paragraph 1.2 and again in 1.14. Yet the proposed green housing sites when taken together would definitely not be fair to West Ardsley and Tingley. No justification has been given as to why there is such a concentration here, nor any evidence of local need. Indeed, paragraph 4.6.14 states that "The SHMA 2011 was not able to identify any geographically specific need for new housing based on population growth." The sites seem to have been assessed individually rather than their cumulative impact. This impact is potentially very much greater when considered alongside Kirklees Council's proposals for the Chidswell area.

4. Highway access

The Upper Green culs-de-sac are not suitable to serve up to 130 more houses. They would become much less safe for children to play in and the already severe dangers at school times would be exacerbated.

5. Schools

Primary and secondary schools already full and difficult to expand further.

6. Agricultural land

Good quality agricultural land would be lost.

7. Viability

Extra costs from: a. parts of 3373A have serious levels problems and look undevelopable; b. bell pits known to exist in the area from former mining; c. elimination of Japanese Knotweed.

Please note my objections to the proposed developments below.
The proposal for site 3373A (This is the site that runs from the top of Baghill around the back of Arthington Close and Upper Green and will finish on Westerton Road opposite Lonsdale Rise) is to build 130 houses. Lee gap Fair is held twice a year in these fields, the fair is the oldest horse fair in England dating back to 1136 and forms part of the history and heritage of the area.
The 3373C site which will run from the top of Hilltop Lane and carve up all the fields from there to Nook Green on Haigh Moor Road is for 144 houses. It can be argued that the highways infrastructure for Site 3373B is inadequate, there are Highways concerns re poor accessibility for the number of houses proposed and then there is the issue of Highways safety with the junction of Hilltop Lane being within 100 metres of the primary school. All the issues on the attached letter are also relevant for site 3373C.
The site on Westerton Road from Regency Gardens to Westerton Wood if developed will see 117 new homes - this land is currently classed as green belt (site 3365 = 83 homes and site 1258 = 34 homes) development here will represent a major incursion into the Green belt and will create further pressure on Ardsley reservoir as a local beauty spot.
Development of sites 3365 and 1258 will result in the loss of valuable agricultural land, there are a number of wide hedgerow and woodland belts throughout the site that provide a valuable habitat for wildlife in particular bats.
Development of the sites on Westerton Road will result in the amorphous sprawl of development across the area along the whole length of the Westerton Road.
Site 1330B is an extension of the building that is currently ongoing adjacent to Jude's pond - and is for a further 32 houses ! This site has major highways access issues and has less than the recommended visibility splay for highways safety - further development of this site will exasperate current problems regarding drainage on the land - Haigh Moor Road residents already have to deal with flooding of the pavements and highways in the vicinity of Jude's pond.
Please note that all these sites are in addition to any planning applications that have already been approved.
464 houses in such a small vicinity is unsustainable, there are currently just over 300 pupils at Hill Top Primary School with no room for any expansion, the school is full and the same is true of Westerton which as you know was a small village school 20 years ago but is now one of the biggest primary schools in the Leeds district and all because of the amount of building that has taken place over recent years.

Representor No: PRS05109

Leeds City Council have in their allocation plan confirmed that Ardsley and Robin Hood have a deficiency in parks and gardens (the only area in Leeds South West to be deficient) - our children already have very little designated play areas, they have also confirmed that we are deficient in outdoor sports areas and facilities for children to play. We have however got a surplus of natural green space which is currently under threat of housing - if this natural greenspace is to be used for any purpose, surely it should be used to reduce the deficit and improve our community. Further reduction of amenity greenspace in an area which is seeing more and more housing development is unfair and unsustainable. Our GP surgeries are at breaking point with current waiting times for appointments being in excess of two weeks, the surgery at Leigh View was recently extended and it's difficult to envisage how this could be extended further to serve the population boom that will ensue if all these sites are developed. Further erosion of the demarcation between West Ardsley & Tingley - soon the two settlements will merge into one and West Ardsley as a separate community will be subsumed into its near neighbour, the two areas will be barely distinguishable from each other which is contrary to the Councils policy SP1 which clearly states smaller Settlements will contribute to development needs, with the scale of growth having regard to the settlement's size, function and sustainability. If these plans were approved it will no doubt result in urban sprawl with no identifiable boundaries. Our fields provide a public amenity for dog-walkers, cyclists, ramblers and local residents alike and It would virtually eliminate the open centre and consolidate the semi-rural group of settlements into a predominantly urban residential area". This view was endorsed by the Secretary of State in their past decision letter. Our road network was not built to support the existing volume of traffic , we do not have the infrastructure to support development of this scale, our public transport links are very poor with only one bus an hour into Leeds, the only viable means of transportation is by car which will have a cumulative impact on the A650 and A653 which are already congested. I look forward to your response and confirmation that these developments will not go ahead

Representor No: PRS05111

Representation ID: REP05692 Question Ref: H1

Hi,

I would like to object against the planning proposals for the following sites on Map 33 (off Westerton Road)

1336

3373B

3373A

1330B

33732

3365

3373C

3456A

3456B

1258

I suggest that these should all be changed to RED due to the following reasons:

Too much traffic already so roads will be extremely busy right outside my front door. I have young children and will be scared for their safety.

Services such as Doctors surgery's, dentists, local hospitals, schools, supermarkets already too busy so won't be able to cope

Less water will be absorbed into the ground resulting in more flooding in our gardens.

This is currently already happening in several houses on Westerton Road including mine.

There are bats, foxes, owls, frogs, newts and many birds living in the area especially on sites 1336, 3373A, 3373B, 3373C. Should these not be protected?

House prices for homeowners in the area already will decrease.

We moved to the area because of the greenery and our view will be spoilt.

The sewerage system in place on Westerton Road recently failed causing waste from the sewers to overflow into nearby houses. This was due to the recent housing developments that have recently been built nearby so the sewerage system was unable to cope. This could very likely happen again.

Representation ID: REP05702 Question Ref: General comment

Firstly I would like to express my disappointment and embarrassment towards the councils plans for the proposed plans listed below. I understand the reason behind the lack of communication with the residents in the area may be beneficial to the local council and certain government groups. It obviously cuts down on man hours and paperwork.

I would like to object against the planning proposals for the following sites on Map 33 (off Westerton Road)

1336

3373B

3373A

1330B

33732

3456A

3456B

1258

The infrastructure in this area will struggle to cope with the demands of the services required.

The area is attracting wildlife not seen in built up areas. It seems a shame to disregard the wildlife issue I'm sure if a full environmental survey of the area was to be carried out this would scupper the planning permission. But again that would be an extra cost to the council which would have an impact at year end when the books are balanced.

Representor No: PRS05165

Representation ID: REP05748 Question Ref: H1

I wish to object to the above sites on the following basis

Site 3373A and 3373C Objections

1. Local character and identity

Development of these sites would be contrary to the following

sections of the Council's policy SP1 in the Core Strategy:

1. SP1 (i) states: "Smaller Settlements will contribute to development needs, with the scale of growth having regard to the settlement's size, function and sustainability."

Sites 3373A and 3373C with their estimated capacity of 277 dwellings, does not have regard to the size, function and sustainability of West Ardsley.

SP1 (iii) states: "For development to respect and enhance the local character and identity of places and neighbourhoods". The local character and identity of West Ardsley would be seriously threatened especially when combined with sites 3373A, 3373C and 1336, and would make its component areas of Upper Green, Haigh Moor and Hill Top barely distinguishable from each other.

My view accords with three decision letters from the Planning Inspectorate which were used in the Council's own evidence to the Unitary Development Plan public inquiry in 1995. In paragraph 39 of his report on the Morley Local Plan, the inspector considered that the planned development at Haigh Wood (site WA2H) would have a "very serious impact upon the character and environment of West Ardsley". He concluded in paragraph 10: "In the past, development in the Morley area would appear to have been sporadic and opportunistic, placing the identity of the smaller settlements at risk and tending towards the creation of amorphous sprawl of development across the area along the length of the A650 Bradford to Wakefield road. In my view, the further diffusion of the existing loosely-knit settlement pattern should, as far as possible, be resisted."

Considering appeals in 1986 on 81/23/00212 and 81/23/00213 (broadly the same area as LDF sites 3373A/B/C and 1336) the inspector said "It would virtually eliminate the open centre and consolidate the semi-rural group of settlements into a predominantly urban residential area". This was endorsed in the Secretary of State's decision letter.

In 1994, a third inspector dismissed an appeal to develop land at Arthington Close near the edge of Haigh Wood because it would "unacceptably erode the fringe of this rural area and would lead to pressure for further encroachment of residential development, most particularly in the fields to the west."

Although some years have passed since these decisions, the character and environment of the area are still semi-rural and just as delicate. When cogent arguments have been repeatedly made against development of the 3373 areas by the Secretary of State, by three planning inspectors and by Leeds Council itself (in evidence to the UDP inquiry), there can be no justification for sites 3373A, 3373C and 1336 being pursued for residential development in the LDF. They should instead be reclassified as "red" and withdrawn from consideration for development when producing the next stage of the plan.

2. Damage to Haigh Wood and Baghill beck valley

Development of this site would be contrary to the Council's policy

P12 in the Core Strategy:

"The character, quality and biodiversity of Leeds' townscapes and landscapes, including their historical and cultural significance, will be conserved and enhanced to protect their distinctiveness through stewardship and the planning process." The secluded Haigh Wood valley comprises the central portion of site 3373A, including part of the wood covered by a Tree Preservation Order. Residential development would prejudice the objectives underlining this policy as set out in paragraphs 5.3.46 to 5.3.48 of the Core Strategy including: "The Council seeks to protect and enhance the varied landscapes of Leeds and the assets they contain, from valued local trees, the countryside to nationally designated landscape, fauna and flora". This view was endorsed by three planning inspectors and again in the Council's evidence, given by Mr G B Andrews, at the UDP inquiry. In his paragraph 4.3.6, Mr Andrews stated: I refer to the conclusions reached by the inspectors at the two subsequent appeal cases in 1985 and 1994. In each case it is acknowledged that the Haigh Wood area is of value as an area of attractive open farmland with a rural character and provides an important amenity in the local area". Even the Council's own assessment for the LDF states that the site is: "Not supported (RED). This site includes Haigh Wood and Baghill Beck Local Nature Area which fall under UK Biological Action Plan priority habitats - a mixture of woodland, scrub and grassland habitats alongside Baghill Beck. There are a number of wide hedgerow/woodland belts

Site Comments - Outer South West

Site reference: 3373C

Housing

Haigh Wood, Ardsley

Name: Eric Mearis

Representor No: PRS05165

throughout the site that provide a valuable habitat. Water vole has been recorded on the Hey Beck. The Baghill Beck flows into this water course and could support this species. Bats to consider."

3. Fairness

The Core Strategy seeks to be "fair". The word is used in paragraph 1.2 and again in 1.14. Yet the proposed green housing sites when taken together would definitely not be fair to West Ardsley and Tingley. No justification has been given as to why there is such a concentration here, nor any evidence of local need. Indeed, paragraph 4.6.14 states that "The SHMA 2011 was not able to identify any geographically specific need for new housing based on population growth." The sites seem to have been assessed individually rather than their cumulative impact. This impact is potentially very much greater when considered alongside Kirklees Council's proposals for the Chidswell area.

4. Highway access

The Upper Green culs-de-sac and Hill Top Lane cul-de-sacs are not suitable to serve up to 274 more houses. They would become much less safe for children to play in and the already severe dangers at school times would be exacerbated. Both cul-de-sacs are within 100 metres of primary schools

5. Schools

Primary and secondary schools already full and difficult to expand further.

6. Agricultural land

Good quality agricultural land would be lost.

7. Viability

Extra costs from: a. parts of 3373A have serious levels problems and look undevelopable; b. bell pits known to exist in the area from former mining; c. elimination of Japanese Knotweed.

OTHER POINTS TO BE RAISED

Site 3373A Lee gap Fair is held twice a year in these fields, the fair is the oldest horse fair in England dating back to 1136 and forms part of the history and heritage of the area.

The 3373C site the highways infrastructure for Site 3373C is inadequate, there are Highways concerns re poor accessibility for the number of houses proposed and then there is the issue of Highways safety with the junction of Hilltop Lane being within 100 metres of the primary school

The site on Westerton Road from Regency Gardens to Westerton Wood this land is currently classed as green belt (site 3365 = 83 homes and site 1258 = 34 homes) development here will represent a major incursion into the Green belt and will create further pressure on Ardsley reservoir as a local beauty spot. Development of sites 3365 and 1258 will result in the loss of valuable agricultural land, there are a number of wide hedgerow and woodland belts throughout the site that provide a valuable habitat for wildlife in particular bats. Development of the sites on Westerton Road will result in the amorphous sprawl of development across the area along the whole length of the Westerton Road.

Site 1330B is an extension of the building that is currently ongoing adjacent to Jude's pond - and is for a further 32 houses ! This site has major highways access issues and has less than the recommended visibility splay for highways safety - further development of this site will exasperate current problems regarding drainage on the land - Haigh Moor Road residents already have to deal with flooding of the pavements and highways in the vicinity of Jude's pond.

464 houses in such a small vicinity is unsustainable, there are currently just over 300 pupils at Hill Top Primary School with no room for any expansion, the school is full and the same is true of Westerton which as you know was a small village school 20 years ago but is now one of the biggest primary schools in the Leeds district and all because of the amount of building that has taken place over recent years.

Representation ID: REP05759 Question Ref: H1

I wish to object to 3373A, 3373B & 3373C.

[x]

I wish to object on the following grounds:

. The Haigh Wood site reference is 3373, and it is split into 3 parts:

. 3373A is land between Westerton Road & Haigh Wood. This has been assessed as suitable for residential development, with a capacity of 130 houses.

. 3373B is Haigh Wood itself. This has been assessed as unsuitable for residential development because of the topography of the site and access

. 3373C is the fields between Haigh Wood & Woollin Crescent, linking right round to Nook Farm.

The proposal for site 3373A (This is the site that runs from the top of Baghill around the back of Arthington Close and Upper Green and will finish on Westerton Road opposite Lonsdale Rise) is to build 130 houses. Lee gap Fair is held twice a year in these fields, the fair is the oldest horse fair in England dating back to 1136 and forms part of the history and heritage of the area.

The 3373C site which will run from the top of Hilltop Lane and carve up all the fields from there to Nook Green on Haigh Moor Road is for 144 houses. It can be argued that the highways infrastructure for Site 3373B is inadequate, there are Highways concerns re poor accessibility for the number of houses proposed and then there is the issue of Highways safety with the junction of Hilltop Lane being within 100 metres of the primary school. All the issues on the attached letter are also relevant for site 3373C.

The site on Westerton Road from Regency Gardens to Westerton Wood if developed will see 117 new homes - this land is currently classed as green belt (site 3365 = 83 homes and site 1258 = 34 homes) development here will represent a major incursion into the Green belt and will create further pressure on Ardsley reservoir as a local beauty spot. Development of sites 3365 and 1258 will result in the loss of valuable agricultural land, there are a number of wide hedgerow and woodland belts throughout the site that provide a valuable habitat for wildlife in particular bats. Development of the sites on Westerton Road will result in the amorphous sprawl of development across the area along the whole length of the Westerton Road. Site 1330B is an extension of the building that is currently ongoing adjacent to Jude's pond - and is for a further 32 houses ! This site has major highways access issues and has less than the recommended visibility splay for highways safety - further development of this site will exasperate current problems regarding drainage on the land - Haigh Moor Road residents already have to deal with flooding of the pavements and highways in the vicinity of Jude's pond.

Please note that all these sites are in addition to any planning applications that have already been approved.

3373c – Suggested change GREEN to AMBER

Reason for change - Again spoiling the natural beauty of the wood which is enjoyed by everyone and would also affect wildlife.

Other remarks - Would impact on traffic schools and of practises. Volumes of traffic have increased tremendously in recent years with all types of vehicles coming from Wakefield via Kirkhamgate, Over Hill Top and up Bashill Road on their way to Bradford Leeds etc.

Name: Lisa Mulherin

Representor No: PRS05734

Representation ID: REP07126 Question Ref: H1

3373A and C either side of Haigh Wood – 274houses across these sites are unsustainable. There is a significant lack of school places. Both Hilltop and Westerton Primary are full. Hilltop is a tightly constrained PFI site and it is hard to see how it could be expanded. Westerton is already 3 form entry. Public transport links are terrible. For those reliant on public transport it is a two hour round trip to the GPs on Bradford Road. Open views across Haigh Wood would inevitably be damaged (a feature that a previous planning inspector was keen to maintain. Access to site 3373C would be potentially dangerous exiting on to Batley Road at the brow of the hill near Hilltop Primary. These Green Belt sites should be re-designated Red.

Site Comments - Outer South West

Site reference: 3373C

Housing

Haigh Wood, Ardsley

Name: Neil Dawson

Representor No: PRS05884

Representation ID: REP06563 Question Ref: H1

Suggested sites from Green to Red;

1029
1072
1143B
1143D
1200A
1258
1344
3365
3373A
3373C
3456A

All of the above sites are in the current Green Belt with the exception of the 3373A and 3373C which are open land.

The other sites are all located within the existing Green Belt and any development would lead to increased urban sprawl between the various townships in the Outer South West, and lead to coalescence between communities.

Development of the Green Belt sites would also reduce the open green area between settlements and create encroachment into the countryside around Morley.

In addition there is insufficient road capacity in the area particularly the very busy single carriageway A650 from East Ardsley to Tingley. Even if there is no development of the above sites there is in the allocation plan over 1,200 additional new houses close to the A650 which will put additional strain on this busy road.

The Haigh Moor sites are part of a natural valley which is popular for recreational activities. The whole site is considered best treated as one, therefore if the largest part 3373B is not to be used for housing then the other parts of the site should be treated in a similar manner. This should be retained as open green space.

Site 1072 is in the Green Belt and although there are properties adjacent it is located near to the A653 and shares similar characteristics to site 3078B which is not considered suitable for development. A development at this site would set a precedent for incursion into the Green Belt between Leeds and Kirklees.

See rep for full details.

Representation ID: REP06857 Question Ref: H1

Sites 3373A & 3373C, Green to Red (assumed)

I believe the areas in question are the only green areas left in the area for children to play, people to walk their dogs etc, Tingley is already overcrowded with schools so much so that local children are having to travel to schools further away. This is the last of the green belt area left in tingley/ardsley. We already have too much traffic for such a built up area.

Name: Karen Renshaw

Representor No: PRS06048

Representation ID: REP06876 Question Ref: H1

3373A & 3373C Haigh Wood, West Ardsley – total of 274 properties. This is unacceptable and the area could not facilitate and/or accommodate this number of properties.. Local children have no places within their schools already and it's also a 2 hour journey to access the Dr's surgery for these local residents. The bus and transport service is inadequate and would need to be addressed as well as roads not created to take the amount of traffic which would be using the highways, endangering local residents and young people on school journeys. This area would lose its character and identity by developments merging different localities into one blur – villages and area gone forever.

Housing

Haigh Wood, Ardsley

Name: West Ardsley Consortium

Representor No: PRS06168

Representation ID: REP06984 Question Ref: H1

Allocations Issues and Options Document- Sites 536 (Nook Farm) , 1330 B (Adjacent to Judes Pond), 1336 (Westerton Road, and 3373 A, Band C (Haigh Wood)

We act on behalf of the West Ardsley Consortium that has made formal comments to the Leeds Site Allocations Issues and Options documents. We enclose a copy of the Document submitted with the formal response for your information.

Our clients are interested in sites 536 (Nook Farm) , 1330 8 (Adjacent to Judes Pond), 1336 (Westerton Road, and 3373 A, 8 and C (Haigh Wood) and have previously made representations for the sites to be allocated, along with a substantial area of ecologically maintained open space centred around the Haigh Wood area.

Having seen the draft proposals our clients are supportive in principle of the Councils approach to identifying a large portion of the land promoted by them for residential development. The areas identified as "Green" (for development) in the Issues and Options document at Haigh Wood amount to 16.83 Ha of land with a suggested dwelling capacity of over 400 units (at a reasonably low 25/Ha). The areas identified as "Red" (felt to be not suitable for development) amount to 17.5 Ha. This sets an approach of slightly over half the land being protected from development.

We note that the site known as Nook Farm (536) is an existing UDPR commitment and has no policy designation that has or would suggest anything other than its suitability for residential development. That site also has (contrary to the suggestion in the Issues and Options document) an extant planning permission. The details of this are set out in our formal representations.

I have reviewed the indicative boundaries suggested between the "Green" and "Red" sites in the Issues and Options document and undertaken a detailed assessment against trees, topography, the LNA of Haigh Wood and the stream running through it, whilst acknowledging the need for an uninterrupted green corridor separating the north west and south east areas of land, our clients are firmly of the view that the Councils preliminary work does not produce appropriate boundaries between development allocations and non development allocations. For example as figure 3 in the attached document shows land is identified by the Council for development in site 33 73A that includes part of the LNA, the trees of Haigh Wood and the stream running through it, whilst seeking to protect from development land to the south east which has none of those considerations applying to it.

Utilising the work already done on ecology, trees and hedges, landscape and topography, our Clients have carefully considered the Councils objectives and aspirations from the comments in the tables and proposals associated with the Issues and Options document. They have produced a revised masterplan and from that been able to identify appropriate development and allocation boundaries. These maintain a broad green corridor through the valley, protecting ecological interests, trees and the stream as well as views and the "open feel" of the valley itself. In particular this has not only widened the broad swathe of green between the development areas, compared to the earlier 2012 masterplan, but removed any road connections across the valley.

The resultant masterplan has been informed by all the Consortium team's professional disciplines and the changed highways connections fully evaluated to ensure they work appropriately.

The outcome is that of the area in the UDPR that is identified as N 11 (some 36.14 Ha) only 40% is now proposed for development. The suggested allocations (boundaries shown in red on Figure 6 of the attached document include (so that the allocations are not excessively subdivided) substantial green corridors and strategic planting, amounting to some 3.241ha. These run along the existing and proposed pedestrian and bridleway access corridors to the valley and the Wood. The suggested total area of the allocations (including the 3.24 Ha of undeveloped green space) is under half of the current N 11 land at 17.66 Ha. We believe this provides the right balance of development and protection of the wider site.

We note that the areas identified as "Green" in the Issues and Options document in this Outer South West area are insufficient by some margin (1,432) to meet the Core Strategy suggested proportion of housing for the area, even taking into account (and not questioning) the amount of development to come forward from permissions and existing allocations. There should be no doubt that all "Green" sites should therefore go forward for allocation. Indeed more will need to be found from "Amber" or even "Red" sites to provide sufficient land. In addition, there are proportionately far fewer "Green" sites (compared to "Amber") in East and West Ardsley than there are in Morley or the rest of the Outer South West.

The site at Haigh Wood with its non greenbelt status and accessibility and sustainability credentials provides a very good location for development and the provision of material environmental benefits through protection, increased access and environmental management of the Wood itself. As there have to be exceptional circumstances to take land out of the greenbelt, there must correspondingly be exceptional circumstances not to develop at Haigh Wood ahead of greenbelt land.

For all of these reasons our clients, look forward to working with the Council to bring forward development in line with the attached revised masterplan, which we believe fully addresses all comments made in the Issues and Options document and the related concerns about the land at Haigh Wood.

Dear Madam

Allocations Issues and Options Document - Sites 536 (Nook Farm) , 1330 B (Adjacent to Judes Pond), 1336 (Westerton Road, and 3373 A, B and C (Haigh Wood)

We act on behalf of the West Ardsley Consortium that has made formal comments to the Leeds Site Allocations Issues and Options documents. We enclose a copy of the Document submitted with the formal response for your information.

Our clients are interested in sites 536 (Nook Farm) , 1330 B (Adjacent to Judes Pond), 1336 (Westerton Road, and 3373 A, B and C (Haigh Wood) and have previously made representations for the sites to be allocated, along with a substantial area of ecologically maintained open space centred around the Haigh Wood area.

Having seen the draft proposals our clients are supportive in principle of the Councils approach to identifying a large portion of the land promoted by them for residential development. The areas identified as "Green" (for development) in the Issues and Options document at Haigh Wood amount to 16.83 Ha of land with a suggested dwelling capacity of over 400 units (at a reasonably low 25/Ha). The areas identified as "Red" (felt to be not suitable for development) amount to 17.5 Ha. This sets an approach of slightly over half the land being protected from development.

We note that the site known as Nook Farm (536) is an existing UDPR commitment and has no policy designation that has or would suggest anything other than its suitability for residential development. That site also has (contrary to the suggestion in the Issues and Options document) an extant planning permission. The details of this are set out in our formal representations.

Having reviewed the indicative boundaries suggested between the "Green" and "Red" sites in the Issues and Options document and undertaken a detailed assessment against trees, topography, the LNA of Haigh Wood and the stream running through it, whilst acknowledging the need for an uninterrupted green corridor separating the north west and south east areas of land, our clients are firmly of the view that the Councils preliminary work does not produce appropriate boundaries between development allocations and non development allocations. For example as figure 3 in the attached document shows land is identified by the Council for development in site 3373A that includes part of the LNA, the trees of Haigh Wood and the stream running through it, whilst seeking to protect from development land to the south east which has none of those considerations applying to it.

Utilising the work already done on ecology, trees and hedges, landscape and topography, our Clients have carefully considered the Councils objectives and aspirations from the comments in the tables and pro formas associated with the Issues and Options document. They have produced a revised masterplan and from that been able to identify appropriate development and allocation boundaries. These maintain a broad green corridor through the valley, protecting ecological interests, trees and the stream as well as views and the "open feel" of the valley itself. In particular this has not only widened the broad swathe of green between the development areas, compared to the earlier 2012 masterplan, but removed any road connections across the valley.

The resultant masterplan has been informed by all the Consortium team's professional disciplines and the changed highways connections fully evaluated to ensure they work appropriately.

The outcome is that of the area in the UDPR that is identified as NI 1 (some 36.14 Ha) only 40% is now proposed for development. The suggested allocations (boundaries shown in red on Figure 6 of the attached document include (so that the allocations are not excessively subdivided) substantial green corridors and strategic planting, amounting to some 3.24Ha. These run along the existing and proposed pedestrian and bridleway access corridors to the valley and the Wood. The suggested total area of the allocations (including the 3.24 Ha of undeveloped green space) is under half of the current NI1 land at 17.66 Ha. We believe this provides the right balance of development and protection of the wider site.

We note that the areas identified as "Green" in the Issues and Options document in this Outer South West area are insufficient by some margin (1,432) to meet the Core Strategy suggested proportion of housing for the area, even taking into account (and not questioning) the amount of development to come forward from permissions and existing allocations. There should be no doubt that all "Green" sites should therefore go forward for allocation. Indeed more will need to be found from "Amber" or even "Red" sites to provide sufficient land. In addition, there are proportionately far fewer "Green" sites (compared to "Amber") in East and West Ardsley than there are in Morley or the rest of the Outer South West.

The site at Haigh Wood with its non greenbelt status and accessibility and sustainability credentials provides a very good location for development and the provision of material environmental benefits through protection, increased access and environmental management of the Wood itself. As there have to be exceptional circumstances to take land out of the greenbelt, there must correspondingly be exceptional circumstances not to develop at Haigh Wood ahead of greenbelt land.

For all of these reasons our clients, look forward to working with the Council to bring forward development in line with the attached revised masterplan, which we believe fully addresses all comments made in the Issues and Options document and the related proformas about the land at Haigh Wood.

Yours faithfully

[x]

No site ref given - assume sites 3373A, B, C

I would like to object to the land at the top of Hill top Lane West Ardsley being allocated for housing, My main concern is the junction coming out of Hill top Lane onto Batley road which already is a hazard, it is a T junction with houses directly facing the end of Hill Top Lane, and the residents park their cars directly in front of their properties. this makes the narrow road even narrower, cars coming up Haybeck lane have a blind corner and some come at terrific speed, there are children crossing at school times and I have witnessed many near misses. Speed cameras, sleeping policemen and SLOW DOWN signs are needed already to prevent the inevitable happening. People Park on Hill Top Lane to drop children off at Hill Top School and Pick up, on both sides of the road, this causes access problems for residents.

The school is only 200 yards from the end of Hill Top Lane. Hill Top School is full to capacity, so unless the buildings are for elderly residents where would the children go to school? Our Local Doctors already have 17,000 patients and are not increasing the number of GP's, I know this as I work within the practice. Children play on Hill top lane on bikes and skate boards, and increased traffic would put a stop to that, it's quiet and safe at present, childrens freedom to play outside their homes in safety has to be considered.

The natural habitat enjoyed by birds, wildlife, walkers, dog walkers and children playing in Haigh Moor woods would be destroyed. The noise, dirt, and heavy plant traffic during development would have a massive affect on residents, especially the elderly who live in the bungalows on the left hand side. who ever has brain stormed this idea wants to come and spend an hour at the bottom of Hill Top lane one school morning and witness the chaos and danger there, we as residents are already inconvenienced greatly by the increased traffic since the School was built.

Representation ID: REP07156 Question Ref: H1

Access to site 3373C might be slightly less problematic via Batley Road and Hill Top but again there is a primary school in the immediate vicinity and the same points will apply.

The recent developments on Westerton Road and Haigh Moor Road have already increased road usage of Westerton Road significantly putting the large number of school children using this road at greater risk.

Representation ID: REP07156 Question Ref: H1

ocal Amenities and Infrastructure.

The inclusion of the sites above when combined with the building which has already taken place and those sites where planning permission has already been granted would result in an unacceptable level of over intensification and have a disastrous impact on local GP surgeries and schools in the immediate area. There is only one GP Practice serving the area and it is oversubscribed with waiting time for an appointment currently running at 3 weeks. This is already unacceptable based on the current number of houses in the area. There is one dental practice with no vacancies for new patients and all local schools are oversubscribed with local children already unable to attend their local schools. The addition of more houses would only cause further problems.

Representation ID: REP07156 Question Ref: H1

The proposed site at 3373A is the site used for the bi-annual gypsy, Roma and traveller horse fair- Lee Gap Fair. This is the oldest horse fair in the country granted under Royal Charter by King Stephen in 1136- so now being in its 877th year. Insufficient consideration has been given to the impact of these proposals on this important part of gypsy, Roma and traveller heritage and it would be completely unacceptable to take away the ability for the travellers from all over the UK and beyond to meet on this land and particularly so when Leeds City Council themselves have taken a keen interest in the fair and the welfare of the travellers who attend.

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Green Sites outside the Core Public Transport Network

Table 1 below contains sites that are classified as 'Sites which have potential to be allocated for housing' but fall outside 400m of the current core bus network. Consideration needs to be given to if these sites would be able to meet the LDF public transport accessibility requirements should housing be brought forward. Significant developer contributions will be required at these sites to improve the public transport to meet the council LDF accessibility policies; particularly in the larger sites should these be brought forward for development. These include SHLAA ref: 2062, 1032, 1046, 1017 & 1055.

Sites which fall marginally outside the 400m catchments and have high bus frequencies or are small sites low capacity are less of concern but are flagged up nonetheless.

The table also includes accessibility assessments results to access other services and facilities within acceptable journey times on public transport.

Gildersome Parish Council would like to comment on the above Leeds LDF as follows:
Regarding proposed residential developments sites 200A (assumed 1200A) Land off Highfield Drive and 3378 Land off Wakefield Road/Street Lane - as both these are in and around Gildersome, we feel that in this area the volume of traffic and the extra pollution, noise and overloading of the infrastructure would change Gildersome and the surrounding area to an unrecognisable place for our local community to live.
Our schools and doctors are over subscribed. We would be left with very little green spaces for people to enjoy close to where they live.
Gildersome Parish Council are already, along with many other members of the local community, opposing a proposed large industrial/warehouse site on Gilderd Road/Asquith Avenue, Ref. 2303010. This area should be allowed to revert back to green belt as it acts as a buffer between Morley, Gildersome and Drighlington. There are many empty warehouse units within the LS27 area and to just concrete over more greenfield sites to make even more empty units is not acceptable.
If the number of proposed developments, residential or warehousing go ahead, the road network will not be able to cope. These are totally unrealistic

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Green and Amber Sites within the Core Public Transport Network

Table 4 below contains sites that are classified as 'Sites which have potential to be allocated for housing' and 'Sites which have potential but issues or not as favoured as green sites' that fall within 400m of the current core bus network.

The sites in this list are supported for housing growth.

Site specific mitigation would be required but it is unlikely that substantial bus service provision would be required at these sites (based on the current public transport network)

From a public transport perspective, we would encourage the prioritisation of these sites based on the proximity to the core public transport network and the bus service frequency levels.

Representation ID: REP06016 Question Ref: H4

3386 – Makro Store, Royds Lane, Lower Wortley Road

4.38 This site is currently occupied by an existing retail store in a mixed employment / residential area. Given the site's location the council have identified the site as being suitable for either employment or residential development. While we don't contest the site's suitability for development, we question its deliverability.

4.39 It is unclear who is promoting the site so unless the council have a clear understanding that the site will come forward in the near future, it should not form an allocation and should be regarded as a windfall site.

Recommendation – reclassify this site as 'red' due to the level of uncertainty surrounding the future intentions of the current occupiers.

Name: Neil Dawson

Representor No: PRS05884

Representation ID: REP06563 Question Ref: H4

The current number of sites required in the Outer South West is 7,200 and notwithstanding my comments above on the overall numbers I would suggest the following changes to site allocations.

The total green and amber housing sites allocated in Outer South West is 9,653 whereas the plan is seeking 5,586 residential units. 1,614 housing units already have planning permission. There is therefore scope to increase the number of housing sites allocated as Red which are therefore not considered suitable for housing allocation.

There are two underlying reasons for revising the allocation of sites from Green and Amber to Red.

Firstly to protect the existing Green Belt around Morley and the Green Belt around smaller settlements in the Outer South West. In particular to restrict the sprawl of large built up areas and to prevent Morley and smaller settlements from merging to existing townships.

Secondly in my submission to the LDF in April 2012 I identified the Beeston Royds area in Outer South West as an area suitable for further significant housing development. This area is on the edge of the main urban area of Leeds. It has very good existing road links (the A61, A58 and the A6110) and it is close to the M621/M62.

There is a mixture of employment and residential use in the area and careful planning in the area should allow both employment and residential developments to take place for the duration of the plan.

Suggested sites to move from Amber to Green;

141
2078
3056
3386
4029

Site 141 is currently in employment use but is a brownfield site and as such should be considered for residential development ahead of other potential Greenfield sites.

The sites 3056, 2078, 4029 and 3386 are located in the Beeston Royds area in Farnley and Wortley ward and should be considered for residential development.

These sites could link with existing development in the area which is part of the main Leeds urban area. These developments will require a new road linking Gelderd Road and Whitehall Road but given the number of housing units this should be economically viable. The area would then have good access to the existing road network, at the Leeds Outer Ring Road and the M621/M62. It is close to retail facilities at Junction One, the White Rose Centre plus local shops in Lower Wortley. There is also potential for primary school development in the area if the total number of sites is expanded.

Amber Sites outside the Core Public Transport Network

Table 2 below contains sites that are classified as 'Sites which have potential but issues or not as favoured as green sites' but fall outside 400m of the current core bus network. Consideration needs to be given to if this site would be able to meet the LDF public transport accessibility requirements should housing be brought forward. We are be minded to recommend that these site were not prioritised for housing until other more accessible site have been considered. Sites which fall marginally outside the 400m catchments and have high bus frequencies or are small low capacity sites are less of concern but are flagged up nonetheless.

Housing

Dewsbury Road, Leeds, LS11 7DF

Name: Lisa Russell

Representor No: PRS05120

Representation ID: REP06004 Question Ref: H1

This representation is prepared on behalf of our client Bizspace with reference to their site, Sugar Mill, located off Dewsbury Road, to the south-west of the Leeds City Centre. A copy of a site and location plan is attached which confirms the boundaries of the site within my client's ownership. This letter should be considered as a representation to the Site Allocations Development Plan Document, Issues and Options Paper.

Volume 1: Plan Overview

Retail Overview

My client wishes to support the retail overview, particularly section 7.1 which focuses retail development in existing centres and within new boundaries identified to accommodate additional retail development. We specifically note the intention to allocate a new centre at Tommy Wass in Map 3 'Hierarchy of Centres - Town and Local Centre Designations', which is fully commended and we consider that this is a suitable and sustainable approach, securing and building upon the existing facilities in the local area. Moreover, this helps to provide shopping and other town centre uses needs near to where the local population live and work and reduces the need to travel. Which meets with the aims and policy requirements of the NPPF and Core Strategy.

Sections 7.9 - 7.11 advises that some of the centres have nearby opportunities for new retail development and, where these exist, have been identified. It also states that, where retail is related to the centre, that the boundary will be revised, where possible. In Volume 2 the southerly part of our client's site, fronting Dewsbury Road is one such opportunity which has been identified adjacent to the Tommy Wass proposed centre. We consider that 1acre of the site, fronting Dewsbury Road is a suitable retail opportunity which exists directly adjacent to the proposed centre (and notwithstanding that the use is already a 'town centre use', offices, and could be included on that basis) should be included within the boundary as a retail opportunity site. It is not physically detached from the centre in any way and we do not consider that there is any reason why it should not form part of this new centre. Indeed, should the retail opportunity be realised at this site, this would help re-enforce and consolidate the new centre and regenerate an underused site. Furthermore, the allocation of the site meets with the core planning principles identified in the NPPF, particularly in proactively driving and supporting sustainable economic development to deliver a thriving local place, responding positively to opportunities for growth and delivering missed use developments on brownfield sites.

In these terms, we support the proposal to amend the centre boundaries to take account of opportunity sites where these relate to a centre. We respectfully request that this approach is applied to our client's site and that the boundary is extended to include 1acre at the front of our client's site, as forming part of the Tommy Wass centre.

Housing Overview

We acknowledge and support the approach taken to sieve out unsuitable sites and, thereafter, to undertake a detailed assessment of the suitability of each site, resulting in a traffic light system to identify the sites with the greatest potential to be allocated for housing. Our client's site was identified as a 'green' site therefore, a site with the greatest potential to be allocated for housing. We agree that our client's site should be green but do not consider that the assessment fully addresses cumulative benefits when developed alongside adjacent sites. The housing strategy only appears to consider the housing allocation (and indeed the retail opportunity to the front of my client's site) individually, rather than as composite parts of a significant regeneration development for Tommy Wass. In these terms we consider that the housing strategy should look closely at promoting 'green' sites adjacent to other development sites which will afford a wider regeneration effect and should therefore be identified as a priority development site for residential, developable in the short term.

No consideration seems to have been given to the existing character of the surrounding area. My client's site is located directly adjacent to and would maintain the character of an established residential area. Moreover, it would create less conflict than the existing use. Appropriate design could also help improve links through the site, for the existing residential population, allowing easier access to the Tommy Wass centre and public transportation system.

Under the new permitted development rights this part of the site may benefit from conversion of the offices to housing and therefore, an allocation would allow developers to consider the most appropriate form and density of residential development, rather than depending solely on conversion of the existing building.

Volume 2: 10 Outer South West

Outer South West Retail Issues and Options

We support the inclusion of the Tommy Wass as a new proposed centre, but note that the boundary on Plan 10.2 extends directly to the west of our client's site, but does not include it. However, within table 10.2.4 the comments section confirms that the site, reference: CFMS019, is already located in the centre and that retail is acceptable, pending other planning consideration. We respectfully request that given the existing office use of the site and confirmation that the site represents a suitable retail opportunity site, that the section fronting Dewsbury Road is included within the centre boundary as it appears that its exclusion from the boundary is an error, as it is inconsistent with table 10.2.4. With no other sites within the Tommy Wass boundary, there is little, or no, further opportunity to promote further investment in the centre. Accordingly, our client's site represents the only sustainable allocation to allow any potential future needs of the local area to be met within the plan period. Furthermore, we agree and support the Council's assessment of sites under 10.2.4, that our client's site represents the most sequentially preferable site put forward under the call for sites exercise and therefore meets with the requirements of the NPPF and Core Strategy, which seek to promote a centre first strategy. We support the proposed allocation of the front part of the site for retail, as part of a wider mixed use development.

Outer South West Housing Issues and Options

We support the approach taken by the Council to sieve out sites which have been removed from further consideration, as per page 17 Volume 1.

Site Comments - Outer South West

Site reference: 3394

Housing

Dewsbury Road, Leeds, LS11 7DF

Name: Lisa Russell

Representor No: PRS05120

We support the categorisation of the remaining pool of sites into a traffic light system, and agree with the assessment that the Sugar Mill site, reference 3394 should be coded 'green' (meaning a site which has the greatest potential to be allocated for housing). Moreover, table 10.3.3 confirms that our client's site is a brownfield site within the urban area, suitable for residential use in principle. It should be noted that this forms part of a wider mixed use proposal which would include a comprehensive development of retail to the front and would retain an element of employment. This mixed use development would secure investment towards the newly allocated Tommy Wass centre and would help secure its vitality and viability.

We consider that the sites identified as 'green' represent the most suitable sites to consider allocating for future housing development. On the basis of the assessment questions against which each site has been assessed, the green sites represent the most sustainable proposals, which will deliver the greatest benefits to new residents and the surrounding community. These sites experience fewer, if any, constraints and therefore offer the most realistic and viable option for development over the plan period and their allocation should be prioritised.

We consider that the Sugar Mill site should be allocated for delivery/development in the short term, and brought forward as part of the larger, mixed-use development of the Sugar Mill site.

Sustainability Assessment

My client's site has been considered by the sustainability assessment as two separate sites. As per our comments above, we consider that the redevelopment of the full site to provide a mixed- use scheme should also be taken into account when assessing the suitability of these specific retail and residential allocations. We support the assessment of the site against the sustainability indicators, but have comments which we would ask are considered when making the final allocations.

Assessment of the Retail Allocation 3394

Under indicators SA1 and SA2, the site is rated as poor with regard to maintaining or improving employment sites and conditions to allow economic growth and investment. No account has been taken that the current site experiences vacancies and the site is continuously marketed. Conversion to retail will secure a higher number of permanent jobs within the area, for people who live near the area and would support equal employment opportunities. Furthermore, if included within the Tommy Wass centre, would help secure the role of the centre and lead to further investment in the local area. Also, as part of a wider mixed use development, a range of uses, including employment, could be promoted. We therefore consider that the scores of SA1 and SA2 should be increased to neutral or good.

Indicator SA11 relates to the re-use of brownfield land and promoting the services for communities. The site is rated as good. It is a brownfield site directly adjacent to the Tommy Wass centre and in close proximity to a large residential population. We consider the redevelopment of this site for retail will secure jobs and services for the local population and therefore should be classed as very good.

Indicator SA15 relates to the transport network and the provision of services, reducing the need to travel by means other than the car. The site has been rated as good, we consider that the redevelopment to retail would help improve the retail offer in Tommy Wass, thereby significantly reducing the need for the local population to travel by car to other locations. It will also provide a local service, easily accessible by pedestrians and cyclist. Furthermore, the site is well serviced by public transport on Dewsbury Road. On this basis, we consider that the site should be rated very good.

Assessment of Housing Allocation CFSM019

Indicator SA18 relates to the reduction of pollution. The site is currently rated as poor. We consider that the rationalisation and redevelopment of the site will not be any more polluting than the existing employment use and should therefore be rated as neutral.

We trust that you will have regard to our letter of representation when preparing the next stage of the plan. Should you require any further clarification, please contact Lisa Russell on the number below. In the meantime, we look forward to receiving confirmation of the safe receipt of this letter.

Site 3394

Our client's site was identified as a 'green' site therefore, a site with the greatest potential to be allocated for housing. We agree that our client's site should be green but do not consider that the assessment fully addresses cumulative benefits when developed alongside adjacent sites. The housing strategy only appears to consider the housing allocation (and indeed the retail opportunity to the front of my client's site) individually, rather than as composite parts of a significant regeneration development for Tommy Wass.

No consideration seems to have been given to the existing character of the surrounding area. My client's site is located directly adjacent to and would maintain the character of an established residential area. Moreover, it would create less conflict than the existing use. Appropriate design could also help improve links through the site, for the existing residential population, allowing easier access to the Tommy Wass centre and public transportation system.

Under the new permitted development rights this part of the site may benefit from conversion of the offices to housing and therefore, an allocation would allow developers to consider the most appropriate form and density of residential development, rather than depending solely on conversion of the existing building.

Table 10.3.3 confirms that our client's site is a brownfield site within the urban area, suitable for residential use in principle. It should be noted that this forms part of a wider mixed use proposal which would include a comprehensive development of retail to the front and would retain an element of employment. This mixed use development would secure investment towards the newly allocated Tommy Wass centre and would help secure its vitality and viability.

Indicator SA18 relates to the reduction of pollution. The site is currently rated as poor. We consider that the rationalisation and redevelopment of the site will not be any more polluting than the existing employment use and should therefore be rated as neutral.

We consider that the Sugar Mill site should be allocated for delivery/development in the short term, and brought forward as part of the larger, mixed-use development of the Sugar Mill site.

3397 – 116 Old Lane, Beeston

4.40 We strongly question this site as a proposed residential allocation. The site is located within Beeston which benefits from a wide range of services and facilities. On paper this site would form a logical infill development. However the site located between a foodstore and other employment uses. There is currently a pending planning application for a retail store. By the councils own admission, the site would therefore be most appropriate for employment use.

Recommendation - reclassify the site in 'red' due the councils initial recommendation that the site would be most appropriate for an employment use.

Representor No: PRS05691

Representation ID: REP07054 Question Ref: H1

LAND AT DAISY HILL MORLEY SITE REF 388 [assume respondent means site ref 3428]

On behalf of our client Persimmon Homes (Leeds) I write in connection with the above site and associated consultation.

We have reviewed the consultation documentation and we are pleased to note that the site has been identified as green in the Site Allocations DPD. We support this notation.

By way of context, land at Daisy Hill is allocated for housing site in the adopted UDP under site reference H3-2A.06. Development of the site is therefore acceptable in principle. The site benefits from planning permission for development and this was granted in December 2012 under decision reference 12/04048/FU.

This recent planning decision demonstrates that development of the site has been considered and found to be acceptable. Therefore the site meets the tests of availability, suitability and viability as set out in the NPPF. We therefore consider that it is entirely appropriate that this site be identified as green in the site assessment on this basis and continued forward as a site allocation in due course.

We also note that applications to discharge conditions associated with planning permission 12/04048/FU have also been submitted for consideration. This shows that it is Persimmon Homes' intention to proceed with the permitted development and to deliver much needed housing in the Outer South West Housing Market Area and Morley. Again this demonstrates further the deliverability of the site and its' appropriateness for allocation.

Therefore we support the proposed notation in this case and the continuation of this site as a deliverable housing allocation.

Table 4 below contains sites that are classified as 'Sites which have potential to be allocated for housing' and 'Sites which have potential but issues or not as favoured as green sites' that fall within 400m of the current core bus network.

The sites in this list are supported for housing growth.

Site specific mitigation would be required but it is unlikely that substantial bus service provision would be required at these sites (based on the current public transport network)

From a public transport perspective, we would encourage the prioritisation of these sites based on the proximity to the core public transport network and the bus service frequency levels.

[see table in full representation submitted which lists sites - green sites are linked to this comment]

3456a Haigh Moor Road - Green to Red

Car park to reservoir for visitors

Name: A V Jarvis

Representor No: PRS01112

Representation ID: REP03164 Question Ref: H1

Site 3456a

A green belt site which if used would create continuous ribbon development along Haigh Moor Road.

This site is divided by the reservoir road, alongside which there is a parking area (shown on Plan 10.5 Types of Greenspace, Site Allocations Plan Volume 2: 10 Outer South West)

The parking area was built to stop parked cars blocking the road. Even with the parking area, overspill parking still takes place on Haigh Moor Road, especially if the weather is good. Building on this green belt site could only increase traffic problems.

Name: Michael Stilwell

Representor No: PRS01133

Representation ID: REP03207 Question Ref: H1

3456A

Lack of amenities – the amenities in the area cannot support the existing population of West Ardsley, never mind accepting an influx of possibly 5000 more.

- Virtually all the shops have closed over the years, there are now only 3 grocery shops in the area. Anyone living at the southern end of Haigh Moor Road has over 1 mile to travel to the nearest shop.

- The schools are overcrowded, Westerton Road has had more external classrooms added, so it cannot be extended. Hill Top School is nearly full now from the existing population growth, again it is extremely limited in expansion possibilities.

- Bus services are pathetic, services to Leeds, Dewsbury and Wakefield are hourly at best. Batley is only accessible from Wakefield –Batley Road. There are areas where buses have been removed completely. This week another service has been stopped.

- There are not any play areas for children, your own survey records this failing.

- There is only one medical centre with 8 doctors giving cover to some existing 15000 patients. To get an appointment with a specific GP can take 3 weeks, the centre has recently been extended to its limits so there is nowhere to go. Also there is only one pharmacist.

Traffic

All the roads in the area are in a bad state of repair, I have lived here for 28 years and Haigh Moor Road has never been resurfaced despite 3 new housing estates accessing it. In June 1992 the planning inspector denied a planning application (91/23/00350) for an annex for an invalid because although neither he nor his brother drove. The reason for this was "I am concerned that were an additional dwelling to be provided there would be no guarantee that it would not lead to additional traffic generation at some future time, perhaps through changed circumstances, with consequent adverse impact on highway safety." Yet here we are with a further 70 houses at Foxfields and Jude's Pond and a proposed 179 on these new sites, probably adding in excess of 500 vehicles to Haigh Moor Road.

There has been a water leak on HMR which despite being reported to Yorkshire Water is still flowing after 3 months and has now become 2 leaks. The western end of Westerton Road is in a dangerous state with potholes and speed restriction bumps. LCC appears to be unable to keep up with the maintenance of its roads in South Leeds.

LCC's attitude to this area seems to be that Ardsley is an outpost on the borders with Wakefield and Kirklees and beyond the borough or Morley, so we can be conveniently ignored. Ardsley is quite definitely being asked to provide the lion's share of new housing without any benefit, it has poor services and has become a dormitory area of Leeds.

Representation ID: REP03799 Question Ref: H1

3456A -

I am making my response by letter; the online boxes rejected my comments because they exceed 3,000 digits.

3373A Haigh Wood, West Ardsley, 3373C Haigh Wood, West Ardsley, 1336 Westerton Road, West Ardsley, 3456A Ardsley Reservoir, 1258 Westerton Road, Tingley, 3365 Westerton Road, Tingley, 1032 Bradford Road, 1143B & 1143D Thorpe Lane, Tingley.

Objections.

The Core Strategy seeks to be "fair". The word is used in paragraph 1.2 and again in 1.14. Yet the proposed green housing sites when taken together would definitely not be fair to West Ardsley and Tingley. No justification has been given as to why there is such a concentration here, nor any evidence of local need. Indeed, paragraph 4.6.14 states that "The SHMA 2011 was not able to identify any geographically specific need for new housing based on population growth." The 13 green housing sites in Ardsley and Tingley seem to have been assessed individually rather than their cumulative impact. This impact is potentially very much greater when considered alongside Kirklees Council's proposals for the Chidswell area, and comes on top of the huge impact on West Ardsley of major housing development in the 1990s - the estates now accessed by Lowry Road and Constable Road. The newly proposed sites taken together would consolidate semi-rural groups of settlements into a predominantly urban residential area. Most of the open frontages to Bradford Road and Westerton Road would be built on, removing open aspects and distant views and tending towards the creation of amorphous sprawl of development across the area along the length of the A650.

Site 3456A. Additional objections.

Core Strategy policy SP1 (iii) states: "For development to respect and enhance the local character and identity of places and neighbourhoods". The local character and identity of West Ardsley would be seriously threatened by 3456A, especially when combined with sites 3373A, 536, 3373C and 1336. Haigh Moor Road has lost most of its open frontages to development; development of 3456A would change the character of this important road and the perception of the area from one of loosely knit settlements to a predominantly urban area. It would destroy views not only of the open land but of Ardsley Reservoir and more distantly to East Ardsley and beyond. The reservoir is a very important open space asset and used in large numbers by local people; development of 3456A would relegate it to a backland site hidden by houses and invisible from the local road network. Its Green Belt status should be preserved and the site shown red instead of green.

I think it is disgusting that the council are wanting to build on greenbelt land on proposed Plots 1336, 3373, 3372, 3373A, 3373B, 3373C, 1330B, 1330A, 536. And 3456A. It is an area of outstanding beauty where people enjoy walking, running, playing and riding horses. Many wild animals live in the fields and to take it away would turn this area into a concrete jungle. It would mean my view at the back would be eradicated, lowering the value of my house, but more importantly the pleasure I have everyday when I look across the field. This city needs green areas where we can walk and get away from the stresses of life. Also, to the rear of my property there is bindweed in the field which I believe would make it difficult for any developers to be able to build on that land. There are plenty of brown field sites which can be developed. Do not take away our green spaces. Totally outrageous.

1079, 1072, 1077, 1143B, 1143D, 1171B, 1200A, 1258, 1284a, 1285, 1344, 2098a, 3365, 3456A.2098C, 2105, 2155, 3000, 3056.3064, 3078A, 4004, and 4029. As previously stated the amber sites that are greenbelt land should not be considered for development. Site 1032 is designated as a protected area of search this land has been retained along the edge of the existing settlement pending more suitable sites being found in the longer term this site should only be developed as a last resort.

Representation ID: REP01024 Question Ref: H2

1079, 1072, 1077, 1143B, 1143D, 1171B, 1200A, 1258, 1284a, 1285, 1344, 2098a, 3365, 3456A. All these sites are green belt sites , green belt land is there to stop urban sprawl and the destruction of the countryside that still remains in this area. If sites 1143B, 1143D, 1143F, 2155, 1274, 1032, and 2128 are built on East Ardsley West Ardsley and Tingley will just become one built up area hemmed in by the M62. Not all of these are greenbelt sites but if the development is allowed the basic principal of having greenbelt in this area will be completely wrecked!

Representation ID: REP01185 Question Ref: H9

3456A - Ardsley Reservoir - Half of this site provides a car park to the well used Ardsley reservoir. The car park is always busy - all day, every day and there seems to be no mention of this in the site description. Traffic / parking on Haigh Moor Road gets very busy when the car park is full and people frequently have to walk into the road as cars half park on the pavement, blocking access for wheelchair users / people with prams / buggies. If this car park was removed, access would be restricted and parking on the road would become a nightmare. When we moved to the area, we had discussions with LCC planning policy officers and they assured us that this land should not be built on. However, it already appears that a planning application is being prepared from the surveys that have taken place. If more houses are proposed, serious consideration needs to be giving to local resources, particularly schools, doctors and dentists as these are over stretched already.

Representation ID: REP01862 Question Ref: H1

The allocation of site number 3456A is supported as a location for sustainable future housing development in the outer south west area. The allocation of the site would represent partial infill development but would retain the openness between the built up area and the reservoir as the proposed site does not extend beyond the existing built up limits. It is considered that a suitable and appropriate boundary to the Green Belt could be drawn that will ensure that the development does not impose on the remaining area of Green Belt. The site is available and deliverable and could provide approximately 40 sustainable new dwellings in the short term 0-5 years to help meet the target of 5586 new dwellings in the area over the plan period.

Hi,

I would like to object against the planning proposals for the following sites on Map 33 (off Westerton Road)

1336

3373B

3373A

1330B

33732

3365

3373C

3456A

3456B

1258

I suggest that these should all be changed to RED due to the following reasons:

Too much traffic already so roads will be extremely busy right outside my front door. I have young children and will be scared for their safety.

Services such as Doctors surgery's, dentists, local hospitals, schools, supermarkets already too busy so won't be able to cope

Less water will be absorbed into the ground resulting in more flooding in our gardens.

This is currently already happening in several houses on Westerton Road including mine.

There are bats, foxes, owls, frogs, newts and many birds living in the area especially on sites 1336, 3373A, 3373B, 3373C. Should these not be protected?

House prices for homeowners in the area already will decrease.

We moved to the area because of the greenery and our view will be spoilt.

The sewerage system in place on Westerton Road recently failed causing waste from the sewers to overflow into nearby houses. This was due to the recent housing developments that have recently been built nearby so the sewerage system was unable to cope. This could very likely happen again.

Firstly I would like to express my disappointment and embarrassment towards the councils plans for the proposed plans listed below. I understand the reason behind the lack of communication with the residents in the area may be beneficial to the local council and certain government groups. It obviously cuts down on man hours and paperwork.

I would like to object against the planning proposals for the following sites on Map 33 (off Westerton Road)

3373B

3373A

1330B

33732

3365

3373C

3456A

3456B

1258

The infrastructure in this area will struggle to cope with the demands of the services required.

The area is attracting wildlife not seen in built up areas. It seems a shame to disregard the wildlife issue I'm sure if a full environmental survey of the area was to be carried out this would scupper the planning permission. But again that would be an extra cost to the council which would have an impact at year end when the books are balanced.

3456A Ardsley Reservoir – This Green Belt site should be re-designated Red because of cumulative impact of new developments along Haigh Moor Road in recent years makes this proposal unsustainable. It would also protect the openness across to the reservoir.

Site Comments - Outer South West

Site reference: 3456A

Housing

Land off Haigh Moor Road

Name: Neil Dawson

Representor No: PRS05884

Representation ID: REP06563 Question Ref: H1

Suggested sites from Green to Red;

1029
1072
1143B
1143D
1200A
1258
1344
3365
3373A
3373C
3456A

All of the above sites are in the current Green Belt with the exception of the 3373A and 3373C which are open land.

The other sites are all located within the existing Green Belt and any development would lead to increased urban sprawl between the various townships in the Outer South West, and lead to coalescence between communities.

Development of the Green Belt sites would also reduce the open green area between settlements and create encroachment into the countryside around Morley.

In addition there is insufficient road capacity in the area particularly the very busy single carriageway A650 from East Ardsley to Tingley. Even if there is no development of the above sites there is in the allocation plan over 1,200 additional new houses close to the A650 which will put additional strain on this busy road.

The Haigh Moor sites are part of a natural valley which is popular for recreational activities. The whole site is considered best treated as one, therefore if the largest part 3373B is not to be used for housing then the other parts of the site should be treated in a similar manner. This should be retained as open green space.

Site 1072 is in the Green Belt and although there are properties adjacent it is located near to the A653 and shares similar characteristics to site 3078B which is not considered suitable for development. A development at this site would set a precedent for incursion into the Green Belt between Leeds and Kirklees.

See rep for full details.

Representation ID: REP07983 Question Ref: H1

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Green Sites outside the Core Public Transport Network

Table 1 below contains sites that are classified as 'Sites which have potential to be allocated for housing' but fall outside 400m of the current core bus network. Consideration needs to be given to if these sites would be able to meet the LDF public transport accessibility requirements should housing be brought forward. Significant developer contributions will be required at these sites to improve the public transport to meet the council LDF accessibility policies; particularly in the larger sites should these be brought forward for development. These include SHLAA ref: 2062, 1032, 1046, 1017 & 1055.

Sites which fall marginally outside the 400m catchments and have high bus frequencies or are small sites low capacity are less of concern but are flagged up nonetheless.

The table also includes accessibility assessments results to access other services and facilities within acceptable journey times on public transport.

[see table in full representation submitted which lists sites]

Representation ID: REP03207 Question Ref: H7

3456A
Lack of amenities – the amenities in the area cannot support the existing population of West Ardsley, never mind accepting an influx of possibly 5000 more.
- Virtually all the shops have closed over the years, there are now only 3 grocery shops in the area. Anyone living at the southern end of Haigh Moor Road has over 1 mile to travel to the nearest shop.
- The schools are overcrowded, Westerton Road has had more external classrooms added, so it cannot be extended. Hill Top School is nearly full now from the existing population growth, again it is extremely limited in expansion possibilities.
- Bus services are pathetic, services to Leeds, Dewsbury and Wakefield are hourly at best. Batley is only accessible from Wakefield –Batley Road. There are areas where buses have been removed completely. This week another service has been stopped.
- There are not any play areas for children, your own survey records this failing.
- There is only one medical centre with 8 doctors giving cover to some existing 15000 patients. To get an appointment with a specific GP can take 3 weeks, the centre has recently been extended to its limits so there is nowhere to go. Also there is only one pharmacist.

Traffic
All the roads in the area are in a bad state of repair, I have lived here for 28 years and Haigh Moor Road has never been resurfaced despite 3 new housing estates accessing it. In June 1992 the planning inspector denied a planning application (91/23/00350) for an annex for an invalid because although neither he nor his brother drove. The reason for this was “I am concerned that were an additional dwelling to be provided there would be no guarantee that it would not lead to additional traffic generation at some future time, perhaps through changed circumstances, with consequent adverse impact on highway safety.” Yet here we are with a further 70 houses at Foxfields and Jude's Pond and a proposed 179 on these new sites, probably adding in excess of 500 vehicles to Haigh Moor Road.

There has been a water leak on HMR which despite being reported to Yorkshire Water is still flowing after 3 months and has now become 2 leaks. The western end of Westerton Road is in a dangerous state with potholes and speed restriction bumps. LCC appears to be unable to keep up with the maintenance of its roads in South Leeds.

LCC's attitude to this area seems to be that Ardsley is an outpost on the borders with Wakefield and Kirklees and beyond the borough or Morley, so we can be conveniently ignored. Ardsley is quite definitely being asked to provide the lion's share of new housing without any benefit, it has poor services and has become a dormitory area of Leeds.

3458 - I object to the above site reference to be considered for any development. Houses are situated on both sides of Whitehall Road next to and adjacent to this site. There are also two road junctions within 200 yards along this stretch of road. In my opinion access to this site would prove dangerous and hazardous on an already busy road.

Name: William Parsons

Representor No: PRS03570

Representation ID: REP00702 Question Ref: H3

The documents did not show which land is classified as "Green Belt", nor did they show the "Settlement Hierarchy" which has been used to "filter out" the following sites around Farnley: 1273, 2076, 3458. Whilst I support the boundaries of the city of Leeds Urban area not drifting further and further out (for example into Wharfedale) I would not expect exemptions for under-developed areas (for example Farsley and Calverly) at the expense of areas which are already heavily developed (my example in this case being Pudsey). So, I would propose these sites to be re-introduced into the Housing allocation process.

Wood End Farm, South of Whitehall Road, Farnley

Name: Wortlea Estates

Representor No: PRS05945

Representation ID: REP06711 Question Ref: H1

Site 3458

Whilst the Council has sieved out the Wood End Farm site (ref: 3458) and therefore no assessment of the site has been undertaken by the Council, it is maintained the site is one which has the greatest potential to be allocated (green) or at the very least it should be identified as an amber site.

This site is suitable for housing development, it would form an extension to the settlement of New Farnley and technical supporting reports have been prepared and submitted to the Council (detailed in the next section of this representation statement) which demonstrate there are no development constraints.

The NPPF, at paragraph 52, specifically supports extensions to existing villages and towns, advising the supply of new homes can sometimes be best achieved through planning for larger scale development through such extensions. The Wood End Farm site would result in a sustainable urban extension to New Farnley. The site is well located for access to employment opportunities in Leeds, lies on an existing bus route and is within easy walking distance of shops and services within the settlement, including a co-op foodstore, post office, two primary schools and a senior school.

On the basis of the evidence set out in this statement, it is maintained this site is one which has the greatest potential to be allocated and therefore the site should be identified as a green site, or at the very least, an amber site.

Wood End Farm, South of Whitehall Road, Farnley

Name: Wortlea Estates

Representor No: PRS05945

Representation ID: REP06711 Question Ref: H10

Site 3458

The Wood End Farm site has not been considered as a future allocation, it was sieved out of the assessment process. We consider the site should have been assessed and that the site was either removed in error as a result of the site being split between two housing market characteristic areas or as a result of the Council taking an inconsistent approach. This site should be considered as a future housing allocation.

The Council's assessment suggests the site is not within the settlement hierarchy. We do not support the Council's reasoning in relation to this site. The Wood End Farm site directly adjoins the settlement of New Farnley at its southern extent. The site lies to the south of Whitehall Road where there are residential dwellings to the north, east and west. It is therefore questioned how the Council can conclude the site is not within the settlement hierarchy, when the site sits adjacent to the settlement limits of New Farnley, which forms part of the Leeds Main Urban Area.

The Council's reasoning cannot be as a result of the site sitting outside, but adjoining the settlement limits, as the vast majority of sites assessed are ones which adjoin the existing built up settlement boundaries of Leeds and its outlying towns / villages.

Similarly, the site cannot have been ruled out because of it sitting to the south of Whitehall Road, not least because there are already residential dwellings on the southern side of Whitehall Road, but principally because the Council has assessed the sites at Harpers Farm, South of Whitehall Road (Ref: 1171A) and Craven Park (Ref: 2159), which sits to the south of the Harpers Farm site. These two sites are materially no different in locational terms to the Wood End Farm site. All of these sites sit to the south of Whitehall Road and would form an extension to the existing settlement limits of New Farnley. The Council has therefore been wholly inconsistent in their approach in sieving out the Wood End Farm site when the Harpers Farm and Craven Park sites were assessed.

A further example is the land at Whitehall Road, Gildersome (Ref: 3001). This site lies to the south west of the Wood End Farm site. In viewing this site on the Outer West map, it appears to bear no relation to any settlement, yet it has been assessed. This site also sits on the edge of the Outer West area, and it would seem the site has been promoted as an extension to the settlement of Gildersome, yet it does not directly adjoin the existing settlement boundary and as such the Council could have readily concluded this site is not within the settlement hierarchy and sieved it out, but this site was assessed.

There would appear to be no logical reason for the Council having concluded the site is not within the settlement hierarchy, given it lies adjacent to the settlement limits of New Farnley and would therefore form an extension to this settlement and in this regard it is no different to the vast number of urban extension sites the Council has assessed. It is considered the site could have only been 'sieved out' in error, as a result of the Council first reviewing the site in the context of its position on the Outer South West map without having reassessed its location in the context of the Outer West map.

As a result of the location of the Outer South West and Outer West housing characteristic market area boundaries, the site is split into two, with the northern part of the site lying within the Outer West area and the southern part of the site lying within the Outer West area. Viewing the site only in the context of the Outer South West area map, the site would appear to bear no relation to any settlement. It is therefore considered the site was sieved out on this basis, without the Council having identified the site extended further northwards with the northern boundary of the site directly adjoining the settlement of New Farnley. It is therefore considered the site was sieved out prior to it being assessed in the context of the Outer West Housing Area, where it directly adjoins an existing settlement.

If it is not the case the site has been removed in error, then it is maintained there is no justification for sieving out this site, given it directly adjoins New Farnley and particularly when considered in the context of the sites the Council has assessed.

On the basis of the evidence set out, it is maintained the Wood End Farm site should not have been sieved out and therefore the site should be assessed prior to the next consultation stage to enable its consideration as a suitable housing allocation which would enable the extension of New Farnley.

See representation submitted for full details

Representation ID: REP06711 Question Ref: H11

Site 3458

The Wood End Farm site (ref: 3458) should be developed in the short term. The site is deliverable in the short term as it is available now, it offers a suitable location for development now and is achievable, as there is a realistic prospect that housing can be delivered within five years.

New Farnley's infrastructure cannot support any more new houses. The schools, doctors etc are already full, the roads cannot cope even now.

Representor No: PRS00130

Representation ID: REP04606 Question Ref: H4

It seems a great deal of money and time has been spent on producing long documents for future development without giving any thought to how the infrastructure is going to cope which is already struggling.

I refer to these following residential sites and possible housing sites.

SITE REF. ADDRESS CAPACITY:

137A Britannia Road 33

137B Britannia Road 87

141 Tingley Common 36

1018A Topcliffe lane 231

3077A Rein Road 246

3077B Rein Road 124

1281B Bruntcliffe Road 234

1064B Bruntcliffe Road 11

3467 Bruntcliffe Road 16

The last three sites have had conditions placed on them by a government inspector that was hard fought for and we strongly feel that those should be included in the LDF.

Development of all of these sites which are close to the A650 would put a vast unexceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock,the problems we have on the A650 are well documentated. Schools are filling up at an alarming rate,health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. ,Morley has no need for anymore industrial estates, warehouses,offices etc.VVhile there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communties. Brownfield sites such asTingley Mills,land at the bottom of High Street,Bridge Street, Fountain Street and the many brownfield sites in Leeds,just to name a few should be developed first. It appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

3467 Bruntcliffe Road 16

The last three sites have had conditions placed on them by a government inspector that was hard fought for and we strongly feel that,those should be included in the LDF.

Development of all of these sites which are close to the A650 would put a vast unexceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock,the problems we have on the A650 are well documented. Schools are filling up at an alarming rate,health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. ,Morley has no need for anymore industrial estates, warehouses,offices etc.While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communities. Brownfield sites such asTingley Mills,land at the bottom of High Street, Bridge Street, Fountain Street and the many brownfield sites in Leeds,just to name a few should be developed first. It appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

Representation ID: REP04501 Question Ref: H4

It seems a great deal of money and time has been spent on producing long documents for future development without giving any thought to how the infrastructure is going to cope which is already struggling.

I refer to these following residential sites and possible housing sites.

SITE REF. ADDRESS CAPACITY:

137A Britannia Road 33

137B Britannia Road 87

141 Tingley Common 36

1018A Topcliffe lane 231

3077A Rein Road 246

3077B Rein Road 124

1281B Bruntcliffe Road 234

1064B Bruntcliffe Road 11

3467 Bruntcliffe Road 16

The last three sites have had conditions placed on them by a government inspector that was hard fought for and we strongly feel that those should be included in the LDF.

Development of all of these sites which are close to the A650 would put a vast unexceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock,the problems we have on the A650 are well documentated. Schools are filling up at an alarming rate,health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. ,Morley has no need for anymore industrial estates, warehouses,offices etc.While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communties. Brownfield sites such asTingley Mills,land at the bottom of High Street,Bridge Street, Fountain Street and the many brownfield sites in Leeds,just to name a few should be developed first. It appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

- 3077A Rein Road 246
- 3077B Rein Road 124
- 1281B Bruntcliffe Road 234
- 1064B Bruntcliffe Road 11
- 3467 Bruntcliffe Road 16

The last three sites have had conditions placed on them by a government inspector that was hard fought for and we strongly feel that those should be included in the LDF.

Development of all of these sites which are close to the A650 would put a vast unexceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock,the problems we have on the A650 are well documentated. Schools are filling up at an alarming rate,health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. ,Morley has no need for anymore industrial estates, warehouses,offices etc.VVhile there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communties. Brownfield sites such asTingley Mills,land at the bottom of High Street,Bridge Street, Fountain Street and the many brownfield sites in Leeds,just to name a few should be developed first. It appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

Representation ID: REP04642 Question Ref: H4

It seems a great deal of money and time has been spent on producing long documents for future development without giving any thought to how the infrastructure is going to cope which is already struggling.

I refer to these following residential sites and possible housing sites.

SITE REF. ADDRESS CAPACITY:

137A Britannia Road 33

137B Britannia Road 87

141 Tingley Common 36

1018A Topcliffe lane 231

3077A Rein Road 246

3077B Rein Road 124

1281B Bruntcliffe Road 234

1064B Bruntcliffe Road 11

3467 Bruntcliffe Road 16

The last three sites have had conditions placed on them by a government inspector that was hard fought for and we strongly feel that those should be included in the LDF.

Development of all of these sites which are close to the A650 would put a vast unexceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock,the problems we have on the A650 are well documentated. Schools are filling up at an alarming rate,health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. ,Morley has no need for anymore industrial estates, warehouses,offices etc.While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communties. Brownfield sites such asTingley Mills,land at the bottom of High Street, Bridge Street, Fountain Street and the many brownfield sites in Leeds,just to name a few should be developed first. It appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

Change from Amber to Green to replace Green sites in Outer South West. 3467 Bruntcliffe Rd, Capacity 16, Ward Morley South Adjacent to a proposed development recently and controversially given outline permission. Infrastructure and access to the A650 are major concerns regarding such a development.

Representor No: PRS02563

Representation ID: REP07833 Question Ref: H4

It seems a great deal of money and time has been spent on producing long documents for future development without giving any thought to how the infrastructure is going to cope which is already struggling.

I refer to these following residential sites and possible housing sites.

SITE REF. ADDRESS CAPACITY:

137A Britannia Road 33

137B Britannia Road 87

141 Tingley Common 36

1018A Topcliffe lane 231

3077A Rein Road 246

3077B Rein Road 124

1281B Bruntcliffe Road 234

1064B Bruntcliffe Road 11

3467 Bruntcliffe Road 16

The last three sites have had conditions placed on them by a government inspector that was hard fought for and we strongly feel that those should be included in the LDF.

Development of all of these sites which are close to the A650 would put a vast unexceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock,the problems we have on the A650 are well documented. Schools are filling up at an alarming rate,health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. ,Morley has no need for anymore industrial estates, warehouses,offices etc.VVhile there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communties. Brownfield sites such asTingley Mills,land at the bottom of High Street,Bridge Street, Fountain Street and the many brownfield sites in Leeds,just to name a few should be developed first. It appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

Potential Education and School sites

The increased level of housing demand will put pressure on schools to accommodate more pupils and therefore there should be some consideration of potential sites for new or extensions to existing schools to ensure there is sufficient capacity for the increased number of children expected to attend schools.

Some initial suggestions are as follows;

Sites 1064A, 3467. These sites are in the Morley urban area with suggested employment use but these may be suitable sites for a new primary school particularly if other housing developments proceed in the Bruntcliffe area.

The PAS site, 2127, at Tingley Station is a large development which along with other developments on nearby on Thorpe Lane is of such a size that it should potentially include a primary school site within or nearby.

At the existing Bruntcliffe School there is some potential to expand at the rear of the current site to either expand the existing school or provide primary provision.

Site 1166 which is adjacent to the existing school at Asquith could be utilized for expansion of the school.

Representation ID: REP07983 Question Ref: H4

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Amber Sites outside the Core Public Transport Network

Table 2 below contains sites that are classified as 'Sites which have potential but issues or not as favoured as green sites' but fall outside 400m of the current core bus network. Consideration needs to be given to if this site would be able to meet the LDF public transport accessibility requirements should housing be brought forward. We are minded to recommend that these site were not prioritised for housing until other more accessible site have been considered. Sites which fall marginally outside the 400m catchments and have high bus frequencies or are small low capacity sites are less of concern but are flagged up nonetheless.

[see table in full representation submitted which lists sites]

Representation ID: REP07896 Question Ref: H4

Agree with amber allocation

Representation ID: REP07896 Question Ref: H4

Site 3467 - Must be co-ordinated with sites nearby and boundaries which should be drawn to reflect the recent Planning permission granted to Barratt Homes and the associated Sec 106 buffer-strip agreement. Remain amber.

Representation ID: REP07896 Question Ref: General comment

There is particular difficulty with a group of sites on Bruntcliffe Road. A recent planning permission caused some confusion by deviating from UDP allocation boundaries; the boundaries, capacities and colour codes need sorting out. This group is made up of LDF sites 1064A red, 1064B green, 1281A lime green, 1281B green and 3467 amber. We have left these untouched.

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Green and Amber Sites within the Core Public Transport Network

Table 4 below contains sites that are classified as 'Sites which have potential to be allocated for housing' and 'Sites which have potential but issues or not as favoured as green sites' that fall within 400m of the current core bus network.

The sites in this list are supported for housing growth.

Site specific mitigation would be required but it is unlikely that substantial bus service provision would be required at these sites (based on the current public transport network)

From a public transport perspective, we would encourage the prioritisation of these sites based on the proximity to the core public transport network and the bus service frequency levels.

Thorpe Hill Farm, Lingwell Gate Lane, Thorpe

Name: Lisa Mulherin

Representor No: PRS05734

Representation ID: REP07126 Question Ref: H4

4004 Thorpe Hill Farm – This site is also supposedly Green Belt but is in industrial use. This site could potentially be used for housing in the future. I support the amber designation.

Name: Neil Dawson

Representor No: PRS05884

Representation ID: REP06563 Question Ref: H4

Suggested sites from Amber to Red;

- 309
- 1067B
- 1069
- 1143F
- 1220A
- 1274
- 1275A
- 1279
- 1332
- 2105
- 2155
- 3000
- 3064
- 3078A
- 4004

These sites are almost all located within the existing Green Belt and expansion into the Green Belt would lead to increased urban sprawl between the various townships in the Outer South West, and lead to coalescence between communities

Development of the Green Belt sites would also reduce the open green area and provide encroachment into the countryside around Morley and other smaller townships.

In addition there is insufficient road capacity and little scope for expansion for other necessary services. There would be a requirement for new or upgrading of existing roads which would therefore favour development on sites that are already located within the Morley or the Leeds Urban areas rather than eroding the Green Belt further.

Site 3078A is close to potential development in Kirklees and could lead to the complete erosion of the Green Belt and open green space between Leeds and Kirklees.

Any further development at sites 1275A and 1279 would reduce the Green Belt between the existing residential boundary and the A653 Dewsbury Road to a narrow strip which would put pressure in future years to extend residential use further east.

See rep for full details.

Housing

Thorpe Hill Farm, Lingwell Gate Lane, Thorpe

Name: Simmons

Representor No: PRS05938

Representation ID: REP06707 Question Ref: H4

An initial submission was made by email on 27 September 2012 which included the Site Proposal Form, Site Ownership Plan, Annotated Photographs and Site Opportunities & Constraints Plan. The Site Allocations Plan Volume 2: 10 Outer South West issued in June 2013 identified the site (reference 4004) with an Amber coding (sites which have potential but there may be issues which need to be resolved, or the site may not be in such a favoured location as those highlighted in Green). The Conclusion of Assessment stated:

'Green Belt site, surrounded by development, well contained and has a road frontage. However, the site is in existing employment use'

Given the above assessment of the site and subsequent discussions with a planning officer at the consultation event at Pudsey Centre on 25 June 2013, the primary issue relating to the allocation of the site for residential use in the forthcoming Site Allocations Plan is the loss of employment land.

The current planning policy relating to the loss of employment land within Leeds City Council's Unitary Development Plan (adopted 19 July 2006) is policy E7, which states:

'With the exceptions of residential development on land no longer needed for employment use and of ancillary development supporting employment uses on the proposal site, applications for uses outside the B use classes will not be permitted on land identified for employment purposes under policies E3 and E4, and on land or for premises currently or last in employment use, unless all the following criteria can be met:

(i) the site is not reserved for specific types of employment use under policies E8 and E18

Although the site is not identified for employment use under policies E3 or E4, it is currently in employment use. An assessment of the criteria detailed above and on the previous page is therefore required in order to demonstrate that there is no planning need for the site to be retained in employment use and an allocation for residential use can proceed.

Representation ID: REP06707 Question Ref: H4

(iii) With regard to the local area, there are two sites in close proximity to the proposed site that were previously allocated for employment use under the Employment Land Review (2010 Update):

o Former Brick Works, Lingwell Gate Lane, Thorpe (site reference 2201920 / 2201921)

Part of the site already has full planning permission for housing and is being developed. The remaining part was previously allocated for employment use under Policy E4 (40) for industrial and warehousing development, although this allocation is proposed to be removed under the Site Allocations Plan and replaced with a housing allocation for 54 units (site reference 148 – Green coding)

o Thorpe Hall, Thorpe Lane, Thorpe (site reference 2201930)

The site was previously allocated for employment use under Policy E4 (41) for office development, although the site this allocation is proposed to be removed under the Site Allocations Plan and would potentially be replaced with a housing allocation for 70 units (site reference 309 – Amber coding)

With regard to employment land availability being promoted by the Site Allocations Plan, there are a number of employment sites with existing planning permissions and allocations within 2.5 miles (4km) of the site at Capitol Park in Tingley and within the Aire Valley Leeds Area Action Plan. Both of these areas provide greatly improved infrastructure, accessibility and a wide range of employment uses when compared to the proposed site

Representation ID: REP06707 Question Ref: H4

(iv) The proposed allocation for residential use would not result in environmental, amenity or traffic problems. The site is in close proximity to the settlement of Thorpe-on-the-Hill and

meets all of the relevant standards for primary / secondary education and primary health needs. The proposed residential use would also result in improved environmental and amenity standards for the existing settlement, the recent residential developments in close proximity to the site and the proposed re-allocation of the two adjacent sites from employment to housing use. The site has bus stops in close proximity (within 125m), and although it has access to only two buses per hour the A61 is located less than 1km from the site which provides excellent bus access to Leeds, Wakefield and beyond. The site has an existing vehicular access from Lingwell Gate Lane which would adequately serve the indicative number of proposed dwellings (57) with appropriate access width and visibility already in place. With regard to the local traffic network, Leeds City Council Highways confirmed that spare capacity onto the main highway network is available although there may be cumulative issues with the adjacent sites being put forward for residential use - a matter that would need to be addressed sequentially as each site is developed

Representation ID: REP06707 Question Ref: H4

The associated planning policy within the emerging Core Strategy of the Local Development Framework is policy EC3 (Safeguarding Existing Employment Land and Industrial Areas), which states:

'The Employment Land Review identifies the following local sub areas - Inner North East, Inner North West, Inner West, Outer North West and Outer North East where there are currently shortfalls in employment land provision.

Development of sites for non-employment uses, which were last used or allocated for employment will only be permitted where;

(i) The proposal would not result in the loss of a deliverable employment site necessary to meet the employment needs during the plan period ('employment needs' as identified in Spatial Policies 8 & 9); and

(ii) The loss of the employment provision on the site can be mitigated by the availability of identified sites in the 'surrounding area which are suitable to meeting the needs of employment ('surrounding area will be defined by drive time and public transport accessibility in Policy T2); and

(iii) In areas of shortfall, the proposal will deliver a mixed use development which continues to provide for a good range of local employment opportunities and would not undermine the viability of the remaining employment site.'

An assessment of criteria (i) and (ii) were made on the previous page during the assessment of the relevant UDP policy. Criteria (iii) does not apply as the site is not located within any of the sub areas with identified shortfalls in employment land provision.

We hope that the above detailed justification will allow the site at Thorpe Hill Farm, Lingwell Gate Lane, Thorpe to be allocated for housing in the forthcoming Site Allocations Plan.

Should any further information, details or justification be required, please do not hesitate to contact us.

(ii) The Site Allocations Plan Issues and Options identify a wide range of sites that are suitable for employment use and that currently have undeveloped planning permissions and allocations to meet the identified requirements in the Core Strategy plan period (2012 – 2028). Given the area of the site (2.17 hectares), the proposed loss of industrial, business and warehousing use will not have a prejudicial impact on the achievement of the Core Strategy requirements

Representation ID: REP06707 Question Ref: H4

(i) The site is not reserved for specific types of employment use under policies E8 or E181

Representor No: PRS06750

Representation ID: REP07983 Question Ref: H4

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Amber Sites outside the Core Public Transport Network

Table 2 below contains sites that are classified as 'Sites which have potential but issues or not as favoured as green sites' but fall outside 400m of the current core bus network. Consideration needs to be given to if this site would be able to meet the LDF public transport accessibility requirements should housing be brought forward. We are minded to recommend that these site were not prioritised for housing until other more accessible site have been considered. Sites which fall marginally outside the 400m catchments and have high bus frequencies or are small low capacity sites are less of concern but are flagged up nonetheless.

- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Green and Amber Sites within the Core Public Transport Network

Table 4 below contains sites that are classified as 'Sites which have potential to be allocated for housing' and 'Sites which have potential but issues or not as favoured as green sites' that fall within 400m of the current core bus network.

The sites in this list are supported for housing growth.

Site specific mitigation would be required but it is unlikely that substantial bus service provision would be required at these sites (based on the current public transport network)

From a public transport perspective, we would encourage the prioritisation of these sites based on the proximity to the core public transport network and the bus service frequency levels.

As previously stated the amber sites that are greenbelt land should not be considered for development. Site 1032 is designated as a protected area of search this land has been retained along the edge of the existing settlement pending more suitable sites being found in the longer term this site should only be developed as a last resort.

Name: Neil Dawson

Representor No: PRS05884

Representation ID: REP06563 Question Ref: H4

The current number of sites required in the Outer South West is 7,200 and not withstanding my comments above on the overall numbers I would suggest the following changes to site allocations.

The total green and amber housing sites allocated in Outer South West is 9,653 whereas the plan is seeking 5,586 residential units. 1,614 housing units already have planning permission. There is therefore scope to increase the number of housing sites allocated as Red which are therefore not considered suitable for housing allocation.

There are two underlying reasons for revising the allocation of sites from Green and Amber to Red.

Firstly to protect the existing Green Belt around Morley and the Green Belt around smaller settlements in the Outer South West. In particular to restrict the sprawl of large built up areas and to prevent Morley and smaller settlements from merging to existing townships.

Secondly in my submission to the LDF in April 2012 I identified the Beeston Royds area in Outer South West as an area suitable for further significant housing development. This area is on the edge of the main urban area of Leeds. It has very good existing road links (the A61, A58 and the A6110) and it is close to the M621/M62.

There is a mixture of employment and residential use in the area and careful planning in the area should allow both employment and residential developments to take place for the duration of the plan.

Suggested sites to move from Amber to Green;

141
2078
3056
3386
4029

Site 141 is currently in employment use but is a brownfield site and as such should be considered for residential development ahead of other potential Greenfield sites.

The sites 3056, 2078, 4029 and 3386 are located in the Beeston Royds area in Farnley and Wortley ward and should be considered for residential development.

These sites could link with existing development in the area which is part of the main Leeds urban area. These developments will require a new road linking Gelderd Road and Whitehall Road but given the number of housing units this should be economically viable. The area would then have good access to the existing road network, at the Leeds Outer Ring Road and the M621/M62. It is close to retail facilities at Junction One, the White Rose Centre plus local shops in Lower Wortley. There is also potential for primary school development in the area if the total number of sites is expanded.

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Green and Amber Sites within the Core Public Transport Network

Table 4 below contains sites that are classified as 'Sites which have potential to be allocated for housing' and 'Sites which have potential but issues or not as favoured as green sites' that fall within 400m of the current core bus network.

The sites in this list are supported for housing growth.

Site specific mitigation would be required but it is unlikely that substantial bus service provision would be required at these sites (based on the current public transport network)

From a public transport perspective, we would encourage the prioritisation of these sites based on the proximity to the core public transport network and the bus service frequency levels.

Representation ID: REP07983 Question Ref: H1

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Green and Amber Sites within the Core Public Transport Network

Table 4 below contains sites that are classified as 'Sites which have potential to be allocated for housing' and 'Sites which have potential but issues or not as favoured as green sites' that fall within 400m of the current core bus network.

The sites in this list are supported for housing growth.

Site specific mitigation would be required but it is unlikely that substantial bus service provision would be required at these sites (based on the current public transport network)

From a public transport perspective, we would encourage the prioritisation of these sites based on the proximity to the core public transport network and the bus service frequency levels.

At Leeds consultation document para 10.2.1 we note and support the proposals for new local retail centres at Drighlington and East Ardsley.

Name: Tom Leadley

Representor No: PRS07137

Representation ID: REP08219 Question Ref: R1

At Leeds consultation document para 10.2.1 we note and support the proposals for new local retail centres at Drighlington and East Ardsley. We also support the reduction in the size of Morley town centre; those parts deleted seem to have lost retailing by natural attrition, so the change does little more than reflect reality. The Tommy Wass lower order local centre is a reasonable designation of shops around a suburban cross roads on the A653 Dewsbury Road as it enters Leeds proper, though it might be suspected that one day there will be a call for demolitions to allow a new crossroads to be laid out. Proposed extensions CFSMO I 9 and CFSM023 are reasonable in themselves and might replace floorspace lost in any crossroads alterations.

Retail

Tommy Wass (Dewsbury Road) Local Centre

Name: Bizspace

Representor No: PRS05122

Representation ID: REP07752 Question Ref: R1

Tommy Wass centre

My client wishes to support the retail overview, particularly section 7.1 which focuses retail development in existing centres and within new boundaries identified to accommodate additional retail development. We specifically note the intention to allocate a new centre at Tommy Wass in Map 3 'Hierarchy of Centres - Town and Local Centre Designations', which is fully commended and we consider that this is a suitable and sustainable approach, securing and building upon the existing facilities in the local area. Moreover, this helps to provide shopping and other town centre uses needs near to where the local population live and work and reduces the need to travel. Which meets with the aims and policy requirements of the NPPF and Core Strategy.

See rep for full details.

Retail

Tommy Wass (Dewsbury Road) Local Centre

Name: Bizspace

Representor No: PRS05122

Representation ID: REP05698 Question Ref: R1

This representation is prepared on behalf of our client Bizspace with reference to their site, Sugar Mill, located off Dewsbury Road, to the south-west of the Leeds City Centre. A copy of a site and location plan is attached which confirms the boundaries of the site within my client's ownership. This letter should be considered as a representation to the Site Allocations Development Plan Document, Issues and Options Paper.

Volume 1: Plan Overview

Retail Overview

My client wishes to support the retail overview, particularly section 7.1 which focuses retail development in existing centres and within new boundaries identified to accommodate additional retail development. We specifically note the intention to allocate a new centre at Tommy Wass in Map 3 'Hierarchy of Centres - Town and Local Centre Designations', which is fully commended and we consider that this is a suitable and sustainable approach, securing and building upon the existing facilities in the local area. Moreover, this helps to provide shopping and other town centre uses needs near to where the local population live and work and reduces the need to travel. Which meets with the aims and policy requirements of the NPPF and Core Strategy. Sections 7.9 - 7.11 advises that some of the centres have nearby opportunities for new retail development and, where these exist, have been identified. It also states that, where retail is related to the centre, that the boundary will be revised, where possible. In Volume 2 the southerly part of our client's site, fronting Dewsbury Road is one such opportunity which has been identified adjacent to the Tommy Wass proposed centre. We consider that 1 acre of the site, fronting Dewsbury Road is a suitable retail opportunity which exists directly adjacent to the proposed centre (and notwithstanding that the use is already a 'town centre use', offices, and could be included on that basis) should be included within the boundary as a retail opportunity site. It is not physically detached from the centre in any way and we do not consider that there is any reason why it should not form part of this new centre. Indeed, should the retail opportunity be realised at this site, this would help re-enforce and consolidate the new centre and regenerate an underused site. Furthermore, the allocation of the site meets with the core planning principles identified in the NPPF, particularly in proactively driving and supporting sustainable economic development to deliver a thriving local place, responding positively to opportunities for growth and delivering missed use developments on brownfield sites.

In these terms, we support the proposal to amend the centre boundaries to take account of opportunity sites where these relate to a centre. We respectfully request that this approach is applied to our client's site and that the boundary is extended to include 1 acre at the front of our client's site, as forming part of the Tommy Wass centre.

Housing Overview

We acknowledge and support the approach taken to sieve out unsuitable sites and, thereafter, to undertake a detailed assessment of the suitability of each site, resulting in a traffic light system to identify the sites with the greatest potential to be allocated for housing. Our client's site was identified as a 'green' site therefore, a site with the greatest potential to be allocated for housing. We agree that our client's site should be green but do not consider that the assessment fully addresses cumulative benefits when developed alongside adjacent sites. The housing strategy only appears to consider the housing allocation (and indeed the retail opportunity to the front of my client's site) individually, rather than as composite parts of a significant regeneration development for Tommy Wass. In these terms we consider that the housing strategy should look closely at promoting 'green' sites adjacent to other development sites which will afford a wider regeneration effect and should therefore be identified as a priority development site for residential, developable in the short term.

No consideration seems to have been given to the existing character of the surrounding area. My client's site is located directly adjacent to and would maintain the character of an established residential area. Moreover, it would create less conflict than the existing use. Appropriate design could also help improve links through the site, for the existing residential population, allowing easier access to the Tommy Wass centre and public transportation system.

Under the new permitted development rights this part of the site may benefit from conversion of the offices to housing and therefore, an allocation would allow developers to consider the most appropriate form and density of residential development, rather than depending solely on conversion of the existing building.

Volume 2: 10 Outer South West

Outer South West Retail Issues and Options

We support the inclusion of the Tommy Wass as a new proposed centre, but note that the boundary on Plan 10.2 extends directly to the west of our client's site, but does not include it. However, within table 10.2.4 the comments section confirms that the site, reference: CFSM019, is already located in the centre and that retail is acceptable, pending other planning consideration. We respectfully request that given the existing office use of the site and confirmation that the site represents a suitable retail opportunity site, that the section fronting Dewsbury Road is included within the centre boundary as it appears that it's exclusion from the boundary is an error, as it is inconsistent with table 10.2.4. With no other sites within the Tommy Wass boundary, there is little, or no, further opportunity to promote further investment in the centre. Accordingly, our client's site represents the only sustainable allocation to allow any potential future needs of the local area to be met within the plan period. Furthermore, we agree and support the Council's assessment of sites under 10.2.4, that our client's site represents the most sequentially preferable site put forward under the call for sites exercise and therefore meets with the requirements of the NPPF and Core Strategy, which seek to promote a centre first strategy. We support the proposed allocation of the front part of the site for retail, as part of a wider mixed use development.

Outer South West Housing Issues and Options

We support the approach taken by the Council to sieve out sites which have been removed from further consideration, as per page 17 Volume 1.

We support the categorisation of the remaining pool of sites into a traffic light system, and agree with the assessment that the Sugar Mill site, reference 3394 should be coded 'green' (meaning a site which has the greatest potential to be allocated for housing). Moreover, table 10.3.3 confirms that our client's site is a brownfield site within the urban area, suitable for residential use in principle. It should be noted that this forms part of a wider mixed use proposal which would include a comprehensive development of retail to the front and would retain an element of employment. This mixed use development would secure investment towards the newly allocated Tommy Wass centre and would help secure its vitality and viability. We consider that the sites identified as 'green' represent the most suitable sites to consider allocating for future housing development. On the basis of the assessment questions against which each site has been assessed, the green sites represent the most sustainable proposals, which will deliver the greatest benefits to new residents and the surrounding community. These sites experience fewer, if any, constraints and therefore offer the most realistic and viable option for development over the plan period and their allocation should be prioritised.

We consider that the Sugar Mill site should be allocated for delivery/development in the short term, and brought forward as part of the larger, mixed-use development of the Sugar Mill site.

Sustainability Assessment

My client's site has been considered by the sustainability assessment as two separate sites. As per our comments above, we consider that the redevelopment of the full site to provide a mixed use scheme should also be taken into account when assessing the suitability of these specific retail and residential allocations. We support the assessment of the site against the sustainability indicators, but have comments which we would ask are considered when making the final allocations.

Retail

Tommy Wass (Dewsbury Road) Local Centre

Name: Bizspace

Representor No: PRS05122

Assessment of the Retail Allocation 3394

Under indicators SA1 and SA2, the site is rated as poor with regard to maintaining or improving employment sites and conditions to allow economic growth and investment. No account has been taken that the current site experiences vacancies and the site is continuously marketed. Conversion to retail will secure a higher number of permanent jobs within the area, for people who live near the area and would support equal employment opportunities. Furthermore, if included within the Tommy Wass centre, would help secure the role of the centre and lead to further investment in the local area. Also, as part of a wider mixed use development, a range of uses, including employment, could be promoted. We therefore consider that the scores of SA1 and SA2 should be increased to neutral or good. Indicator SA11 relates to the re-use of brownfield land and promoting the services for communities. The site is rated as good. It is a brownfield site directly adjacent the Tommy Wass centre and in close proximity to a large residential population. We consider the redevelopment of this site for retail will secure jobs and services for the local population and therefore should be classed as very good. Indicator SA15 relates to the transport network and the provision of services, reducing the need to travel by means other than the car. The site has been rated as good, we consider that the redevelopment to retail would help improve the retail offer in Tommy Wass, thereby significantly reducing the need for the local population to travel by car to other locations. It will also provide a local service, easily accessible by pedestrians and cyclist. Furthermore, the site is well serviced by public transport on Dewsbury Road. On this basis, we consider that the site should be rated very good.

Assessment of Housing Allocation CFSM019

Indicator SA18 relates to the reduction of pollution. The site is currently rated as poor. We consider that the rationalisation and redevelopment of the site will not be any more polluting than the existing employment use and should therefore be rated as neutral.

Representation ID: REP05698 Question Ref: R4

My client wishes to support the retail overview, particularly section 7.1 which focuses retail development in existing centres and within new boundaries identified to accommodate additional retail development. We specifically note the intention to allocate a new centre at Tommy Wass in Map 3 'Hierarchy of Centres - Town and Local Centre Designations', which is fully commended and we consider that this is a suitable and sustainable approach, securing and building upon the existing facilities in the local area. Moreover, this helps to provide shopping and other town centre uses needs near to where the local population live and work and reduces the need to travel. Which meets with the aims and policy requirements of the NPPF and Core Strategy. Sections 7.9 - 7.11 advises that some of the centres have nearby opportunities for new retail development and, where these exist, have been identified. It also states that, where retail is related to the centre, that the boundary will be revised, where possible. In Volume 2 the southerly part of our client's site, fronting Dewsbury Road is one such opportunity which has been identified adjacent to the Tommy Wass proposed centre. We consider that 1 acre of the site, fronting Dewsbury Road is a suitable retail opportunity which exists directly adjacent to the proposed centre (and notwithstanding that the use is already a 'town centre use', offices, and could be included on that basis) should be included within the boundary as a retail opportunity site. It is not physically detached from the centre in any way and we do not consider that there is any reason why it should not form part of this new centre. Indeed, should the retail opportunity be realised at this site, this would help re-enforce and consolidate the new centre and regenerate an underused site. Furthermore, the allocation of the site meets with the core planning principles identified in the NPPF, particularly in proactively driving and supporting sustainable economic development to deliver a thriving local place, responding positively to opportunities for growth and delivering missed use developments on brownfield sites.

In these terms, we support the proposal to amend the centre boundaries to take account of opportunity sites where these relate to a centre. We respectfully request that this approach is applied to our client's site and that the boundary is extended to include 1 acre at the front of our client's site, as forming part of the Tommy Wass centre.

Tommy Wass (Dewsbury Road) Local Centre

Name: Highcross

Representor No: PRS05195

Representation ID: REP07511 Question Ref: R1

Our comments below relate to the Tommy Wass Local Centre (Plan 10.2G) and assessment of Call for Sites under paragraph 10.2.4.

The Issues & Options document indicates that a review of each centre boundary in the outer south west area was carried out along with a survey of current uses. This included the Tommy Wass local centre. The text (paragraph 10.2.2) highlights this involved redefining boundaries of centres to accommodate retail development within centres.

The document further indicates that the Council is not allocating sites for retail in the various centres (including Tommy Wass) but by making boundary changes the Council intends this to provide scope to accommodate additional retailing.

In relation to the "Call for Sites" process and comments by officers following assessment of those representations, paragraph 10.2.4 of the Issues & Options Allocations DPD indicates that the representation site is regarded as being located within the Tommy Wass local centre. We welcome recognition of the inclusion of the site in the centre and therefore the future contribution it could make to the wider retail and service offer in the centre. However, we would request that the local centre boundary, as shown on Plan 10.2G, be amended to reflect its intended inclusion in the defined Tommy Wass centre.

In light of the above we would ask that the boundary defining the extent of the Tommy Wass local centre be corrected to reflect the conclusions reached in the assessment of sites put forward as part of the Call for Sites consultation. This identifies the representation site as being 'in centre' and that 'retail is acceptable use pending other planning considerations'.

The Tommy Wass lower order local centre is a reasonable designation of shops around a suburban cross roads on the A653 Dewsbury Road as it enters Leeds proper, though it might be suspected that one day there will be a call for demolitions to allow a new crossroads to be laid out. Proposed extensions CFSM019 and CFSM023 are reasonable in themselves and might replace floorspace lost in any crossroads alterations.

Middleton

With regard to Middleton we fully support the proposed extension to Middleton District Centre and the recognition of ASDA's investment to incorporate a new ASDA store, which is currently under construction. The provision of a main food store in Middleton District Centre will serve the needs of the surrounding communities in a sustainable location, complementing the other existing facilities within the District Centre.

Name: Aldi

Representor No: PRS06153

Representation ID: REP07038 Question Ref: R1

ALDI Stores Ltd are an active retailer, promoting growth and regeneration opportunities across the Leeds Borough. To date ALDI have approximately 3 trading stores, alongside planning permission for 4 additional stores at Stanningly Road, Bramley; Cardigan Fields, Leeds; Middleton Park Circus, Leeds; and Bradford Road, Guisely. A number of these stores are undergoing construction, and will be open for trade by the end of 2013. A core aim of the business is to secure its long-term viability through growth and expansion opportunities, whilst protecting its existing estate. On this note, ALDI Stores are designed to serve a local catchment, and offer many significant benefits in terms of choice and the creation of competition through low prices. In addition, each store provides local job opportunities (in store and during the construction stage), alongside retained expenditure which benefits existing retailers through linked-trips. In light of the above, we consider that Leeds City Council should seek to encourage and facilitate development, in line with the NPPF. We consider ~ that this can be achieved through the expansion of existing town centre boundaries - to include sites which already benefit from planning permission for retail use. This will be discussed in detail below.

The Leeds Site Allocations Plan will identify or 'allocate' areas of land within the Leeds district for specific types of development, such as housing, employment, retail and green space up to 2028. The Plan provides a number of 'draft' town centre maps, which clearly define the town centre boundaries of each centre, including primary and secondary shopping frontages. Firstly, we note that the Council have referred to the Council's 2011 retail study which identified a need for new retail floorspace (net) within the convenience sector up to 2026: 19,626sqm at 2016 increasing to 30,747sqm at 2021 and 41,515sqm at 2026. We have reviewed the boundaries of all centres, and have provided our comments below where applicable:

RI: Do you have any comments on the proposed centre and Primary Shopping Area (PSA) boundary? Please state the centre/s to which your comments relate. Use plans to support your comments where possible.

Outer South West Maps

Middleton Park Circus

Middleton Park Circus local centre is located on the southern edge of Middleton Park Road. The Council are promoting an identical town centre boundary, as defined in the UDP and Council's 2011 Retail Study. In 2012, ALDI Stores Ltd secured planning permission for a foodstore on the Middleton Arms Public House site, with a net sales area of 990sqm. The proposal was designed to serve as an anchor store to the centre. On the above grounds, we consider that the town centre boundary of Middleton Park Circus local centre should be extended to take into account this recent permission. Please see plan attached to Appendix 1 of this letter. Indeed, the site is located directly opposite the centre, approximately 50m north of the primary shopping frontage, with pedestrian link connecting the site to a range of independent and national retailers within the local centre. Overall, we consider the inclusion of the ALDI site a logical extension to the town centre boundary of Middleton Park Circus, given its location, and role to the neighboring shops and residents

Summary

We note that the Council in preparing their Site Allocations Document have not taken into considered recent permissions for ALDI stores within the district. It is widely acknowledged that ALDI stores play an important role within a local community and support neighboring stores and services through increased expenditure and linked trips. On this basis, we consider that the Council should reconsider their existing boundaries at Kirkstall Road and Middleton Park Circus to include the new ALDI store which will act as anchor stores to the centres.

As the call for sites has not brought significant development potential the need to enhance the existing centres becomes more urgent. It would be of great value to the Morley Primary Shopping Area if a bus station was included in the development plan. This would solve the shambolic situation of buses clogging the area of Queen Street around the Town Hall, help pedestrian safety and improve the shopping experience of that part of the town.

With reference to the above, and on behalf of our clients, Wm Morrison Supermarkets Plc ('Morrisons'), we write to thank you for providing us with the opportunity to comment on the Leeds Site Allocations Issues and Options Development Plan Document.

Morrisons is a major food and grocery retailer who operate 11 foodstores in Leeds, with all but one being located within existing defined town centres. These stores perform a key role in generating a significant amount of activity and pedestrian flows, which helps to maintain the overall vitality and viability of the centres they serve. Morrisons also have a pending application (with a resolution to grant) for a new foodstore on an in-centre site at Chapel Allerton (LPA ref: 12/00822/FU). Our client would like to make comments on the above document to ensure the vitality and viability of the defined centres in Leeds.

Plan 10.2 F: Morley - we support the inclusion of the Morrisons foodstore within the Proposed Primary Shopping Area Boundary

We would be grateful if Peacock and Smith are kept informed on further stages in the preparation of Local Development Framework documents

We also support the reduction in the size of Morley town centre; those parts deleted seem to have lost retailing by natural attrition, so the change does little more than reflect reality.

Name: Tom Leadley

Representor No: PRS07137

Representation ID: REP08219 Question Ref: R1

At Leeds consultation document para 10.2.1 we note and support the proposals for new local retail centres at Drighlington and East Ardsley. We also support the reduction in the size of Morley town centre; those parts deleted seem to have lost retailing by natural attrition, so the change does little more than reflect reality. The Tommy Wass lower order local centre is a reasonable designation of shops around a suburban cross roads on the A653 Dewsbury Road as it enters Leeds proper, though it might be suspected that one day there will be a call for demolitions to allow a new crossroads to be laid out. Proposed extensions CF5M019 and CF5M023 are reasonable in themselves and might replace floorspace lost in any crossroads alterations.

2. Employment Sites

A basic accessibility assessment has been undertaken for the Employment sites. In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network - within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;

The RAG approach we have added is based on the proximity to the core bus network:

- Green - Sites within 400 metres from the core network;
- Amber- Sites between 401 and 600 metres from the core network;
- Red - Sites over 600 metres from the core network.

It should be noted that the RAG assessment is based on the current network and should be used as an indication of the sites accessibility. A number of the larger sites are inevitably classed as Red due the size of the allocation (over 400m) and due to the fact the existing uses do not require bus services (i.e. they are Greenfield site). Where Amber and Red sites are brought forward, there will be an expectation of the developer to raise public transport levels to accessibility levels set out in the LDF policy i.e. 4 buses per hour to Leeds, Wakefield or Bradford.

Wakefield Road Gildersome

Name: Peter Ashton

Representor No: PRS00130

Representation ID: REP05238 Question Ref: General comment

Employment sites and possible employment sites (could also be used for housing)
343 Gildersome 5.147ha, 1018B Topcliffe Lane 26.840ha, 112 Newpshaw Lane 16.305ha, 3007 Junction 27 Gildersome 3.708ha, 1064A Bruntcliffe Road 7.58ha. This last site also has conditions placed on it and those should be included in the LDF.
Development of all these sites which are close to the A650 would put a vast unacceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock, the problems we have on the A650 are well documented. Schools are filling up at an alarming rate, health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. Morley has no need for anymore industrial estates, warehouses, offices etc. While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communities. Brownfield sites such as Tingley Mills, land at the bottom of High Street, Bridge Street, Fountain Street and the many brownfield sites in Leeds, just to name a few should be developed first. IT appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

Morley has no need for anymore industrial estates, warehouses, offices etc. While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communities. Brownfield sites such as Tingley Mills, land at the bottom of High Street, Bridge Street, Fountain Street and the many brownfield sites in Leeds, just to name a few should be developed first. IT appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

Employment sites and possible employment sites (could also be used for housing)
343 Gildersome 5.147ha, 1018B Topcliffe Lane 26.840ha, 112 Newpshaw Lane 16.305ha, 3007 Junction 27 Gildersome 3.708ha, 1064A Bruntcliffe Road 7.58ha. This last site also has conditions placed on it and those should be included in the LDF.
Development of all these sites which are close to the A650 would put a vast unacceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock, the problems we have on the A650 are well documented. Schools are filling up at an alarming rate, health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. Morley has no need for anymore industrial estates, warehouses, offices etc. While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communities. Brownfield sites such as Tingley Mills, land at the bottom of High Street, Bridge Street, Fountain Street and the many brownfield sites in Leeds, just to name a few should be developed first. Employment sites and possible employment sites (could also be used for housing)

343 Gildersome 5.147ha, 1018B Topcliffe Lane 26.840ha, 112 Newpshaw Lane 16.305ha, 3007 Junction 27 Gildersome 3.708ha, 1064A Bruntcliffe Road 7.58ha. This last site also has conditions placed on it and those should be included in the LDF.

Development of all these sites which are close to the A650 would put a vast unacceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock, the problems we have on the A650 are well documented.

Schools are filling up at an alarming rate, health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. Morley has no need for anymore industrial estates, warehouses, offices etc. While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communities. Brownfield sites such as Tingley Mills, land at the bottom of High Street, Bridge Street, Fountain Street and the many brownfield sites in Leeds, just to name a few should be developed first. IT appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

Employment sites and possible employment sites (could also be used for housing)
343 Gildersome 5.147ha, 1018B Topcliffe Lane 26.840ha, 112 Newpshaw Lane 16.305ha, 3007 Junction 27 Gildersome 3.708ha, 1064A Bruntcliffe Road 7.58ha. This last site also has conditions placed on it and those should be included in the LDF.
Development of all these sites which are close to the A650 would put a vast unacceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock, the problems we have on the A650 are well documented. Schools are filling up at an alarming rate, health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. Morley has no need for anymore industrial estates, warehouses, offices etc. While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communities. Brownfield sites such as Tingley Mills, land at the bottom of High Street, Bridge Street, Fountain Street and the many brownfield sites in Leeds, just to name a few should be developed first. IT appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

2. Employment Sites

A basic accessibility assessment has been undertaken for the Employment sites. In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network - within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;

The RAG approach we have added is based on the proximity to the core bus network:

- Green - Sites within 400 metres from the core network;
- Amber- Sites between 401 and 600 metres from the core network;
- Red - Sites over 600 metres from the core network.

It should be noted that the RAG assessment is based on the current network and should be used as an indication of the sites accessibility. A number of the larger sites are inevitably classed as Red due the size of the allocation (over 400m) and due to the fact the existing uses do not require bus services (i.e. they are Greenfield site). Where Amber and Red sites are brought forward, there will be an expectation of the developer to raise public transport levels to accessibility levels set out in the LDF policy i.e. 4 buses per hour to Leeds, Wakefield or Bradford.

Representation ID: REP08129 Question Ref: E1

The site at Gildersome marked CFSM006 [employment ref 2303010 and 2303011] in lime green is an old UDP allocation; there is a planning application under consideration now and there have been unsuccessful applications in the past. It has been seen as a site for super-sized warehouses, but, potential highway access is quite poor. There needs to be imaginative discussion about this, preferably involving Gildersome Parish Council.

Employment sites and possible employment sites (could also be used for housing)
343 Gildersome 5.147ha, 1018B Topcliffe Lane 26.840ha, 112 Newpshaw Lane 16.305ha, 3007 Junction 27 Gildersome 3.708ha, 1064A Bruntcliffe Road 7.58ha. This last site also has conditions placed on it and those should be included in the LDF.
Development of all these sites which are close to the A650 would put a vast unacceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock, the problems we have on the A650 are well documented. Schools are filling up at an alarming rate, health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. Morley has no need for anymore industrial estates, warehouses, offices etc. While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communities. Brownfield sites such as Tingley Mills, land at the bottom of High Street, Bridge Street, Fountain Street and the many brownfield sites in Leeds, just to name a few should be developed first. IT appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

343 Gildersome 5.147ha, 1018B Topcliffe Lane 26.840ha, 112 Newpshaw Lane 16.305ha, 3007 Junction 27 Gildersome 3.708ha, 1064A Bruntcliffe Road 7.58ha. This last site also has conditions placed on it and those should be included in the LDF.

Development of all these sites which are close to the A650 would put a vast unacceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock, the problems we have on the A650 are well documented. Schools are filling up at an alarming rate, health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. Morley has no need for anymore industrial estates, warehouses, offices etc. While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communities. Brownfield sites such as Tingley Mills, land at the bottom of High Street, Bridge Street, Fountain Street and the many brownfield sites in Leeds, just to name a few should be developed first. IT appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

Employment sites and possible employment sites (could also be used for housing)
343 Gildersome 5.147ha, 1018B Topcliffe Lane 26.840ha, 112 Newpshaw Lane 16.305ha, 3007 Junction 27 Gildersome 3.708ha, 1064A Bruntcliffe Road 7.58ha. This last site also has conditions placed on it and those should be included in the LDF.
Development of all these sites which are close to the A650 would put a vast unacceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock, the problems we have on the A650 are well documented. Schools are filling up at an alarming rate, health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. Morley has no need for anymore industrial estates, warehouses, offices etc. While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communities. Brownfield sites such as Tingley Mills, land at the bottom of High Street, Bridge Street, Fountain Street and the many brownfield sites in Leeds, just to name a few should be developed first. IT appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

Employment sites and possible employment sites (could also be used for housing)
343 Gildersome 5.147ha, 1018B Topcliffe Lane 26.840ha, 112 Newpshaw Lane 16.305ha, 3007 Junction 27 Gildersome 3.708ha, 1064A Bruntcliffe Road 7.58ha. This last site also has conditions placed on it and those should be included in the LDF.
Development of all these sites which are close to the A650 would put a vast unacceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock, the problems we have on the A650 are well documented. Schools are filling up at an alarming rate, health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. Morley has no need for anymore industrial estates, warehouses, offices etc. While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communities. Brownfield sites such as Tingley Mills, land at the bottom of High Street, Bridge Street, Fountain Street and the many brownfield sites in Leeds, just to name a few should be developed first. IT appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

2. Employment Sites

A basic accessibility assessment has been undertaken for the Employment sites. In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network - within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;

The RAG approach we have added is based on the proximity to the core bus network:

- Green - Sites within 400 metres from the core network;
- Amber- Sites between 401 and 600 metres from the core network;
- Red - Sites over 600 metres from the core network.

It should be noted that the RAG assessment is based on the current network and should be used as an indication of the sites accessibility. A number of the larger sites are inevitably classed as Red due the size of the allocation (over 400m) and due to the fact the existing uses do not require bus services (i.e. they are Greenfield site). Where Amber and Red sites are brought forward, there will be an expectation of the developer to raise public transport levels to accessibility levels set out in the LDF policy i.e. 4 buses per hour to Leeds, Wakefield or Bradford.

[See representation submitted for full details and table of sites. This rep no. links to sites in Outer South West area]

Name: Morley Town Council Planning Committee

Representor No: PRS06826

Representation ID: REP08129 Question Ref: E1

The site at Gildersome marked CF5M006 [employment ref 2303010 and 2303011] in lime green is an old UDP allocation; there is a planning application under consideration now and there have been unsuccessful applications in the past. It has been seen as a site for super-sized warehouses, but, potential highway access is quite poor. There needs to be imaginative discussion about this, preferably involving Gildersome Parish Council.

Development of all these sites which are close to the A650 would put a vast unacceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock, the problems we have on the A650 are well documented. Schools are filling up at an alarming rate, health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. Morley has no need for anymore industrial estates, warehouses, offices etc. While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communities. Brownfield sites such as Tingley Mills, land at the bottom of High Street, Bridge Street, Fountain Street and the many brownfield sites in Leeds, just to name a few should be developed first. IT appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

Schools are filling up at an alarming rate, health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. Morley has no need for anymore industrial estates, warehouses, offices etc. While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communities. Brownfield sites such as Tingley Mills, land at the bottom of High Street, Bridge Street, Fountain Street and the many brownfield sites in Leeds, just to name a few should be developed first. IT appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

Employment sites and possible employment sites (could also be used for housing)
343 Gildersome 5.147ha, 1018B Topcliffe Lane 26.840ha, 112 Newpshaw Lane 16.305ha, 3007 Junction 27 Gildersome 3.708ha, 1064A Bruntcliffe Road 7.58ha. This last site also has conditions placed on it and those should be included in the LDF.
Development of all these sites which are close to the A650 would put a vast unacceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock, the problems we have on the A650 are well documented. Schools are filling up at an alarming rate, health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. Morley has no need for anymore industrial estates, warehouses, offices etc. While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communities. Morley has no need for anymore industrial estates, warehouses, offices etc. While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communities. Brownfield sites such as Tingley Mills, land at the bottom of High Street, Bridge Street, Fountain Street and the many brownfield sites in Leeds, just to name a few should be developed first. IT appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

Employment sites and possible employment sites (could also be used for housing)

343 Gildersome 5.147ha, 1018B Topcliffe Lane 26.840ha, 112 Newpshaw Lane 16.305ha, 3007 Junction 27 Gildersome 3.708ha, 1064A Bruntcliffe Road 7.58ha. This last site also has conditions placed on it and those should be included in the LDF.

Development of all these sites which are close to the A650 would put a vast unacceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock, the problems we have on the A650 are well documented.

Schools are filling up at an alarming rate, health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. Morley has no need for anymore industrial estates, warehouses, offices etc. While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communities. Brownfield sites such as Tingley Mills, land at the bottom of High Street, Bridge Street, Fountain Street and the many brownfield sites in Leeds, just to name a few should be developed first. IT appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

Employment sites and possible employment sites (could also be used for housing)
343 Gildersome 5.147ha, 1018B Topcliffe Lane 26.840ha, 112 Newpshaw Lane 16.305ha, 3007 Junction 27 Gildersome 3.708ha, 1064A Bruntcliffe Road 7.58ha. This last site also has conditions placed on it and those should be included in the LDF.
Development of all these sites which are close to the A650 would put a vast unacceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock, the problems we have on the A650 are well documented. Schools are filling up at an alarming rate, health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. Morley has no need for anymore industrial estates, warehouses, offices etc. While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communities. Brownfield sites such as Tingley Mills, land at the bottom of High Street, Bridge Street, Fountain Street and the many brownfield sites in Leeds, just to name a few should be developed first. IT appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

2. Employment Sites

A basic accessibility assessment has been undertaken for the Employment sites. In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network - within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;

The RAG approach we have added is based on the proximity to the core bus network:

- Green - Sites within 400 metres from the core network;
- Amber- Sites between 401 and 600 metres from the core network;
- Red - Sites over 600 metres from the core network.

It should be noted that the RAG assessment is based on the current network and should be used as an indication of the sites accessibility. A number of the larger sites are inevitably classed as Red due the size of the allocation (over 400m) and due to the fact the existing uses do not require bus services (i.e. they are Greenfield site). Where Amber and Red sites are brought forward, there will be an expectation of the developer to raise public transport levels to accessibility levels set out in the LDF policy i.e. 4 buses per hour to Leeds, Wakefield or Bradford.

Development of all these sites which are close to the A650 would put a vast unacceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock, the problems we have on the A650 are well documented. Schools are filling up at an alarming rate, health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. Morley has no need for anymore industrial estates, warehouses, offices etc. While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communities. Brownfield sites such as Tingley Mills, land at the bottom of High Street, Bridge Street, Fountain Street and the many brownfield sites in Leeds, just to name a few should be developed first. IT appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

Development of all these sites which are close to the A650 would put a vast unacceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock, the problems we have on the A650 are well documented. Schools are filling up at an alarming rate, health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. Morley has no need for anymore industrial estates, warehouses, offices etc. While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communities. Brownfield sites such as Tingley Mills, land at the bottom of High Street, Bridge Street, Fountain Street and the many brownfield sites in Leeds, just to name a few should be developed first. IT appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

Development of all these sites which are close to the A650 would put a vast unacceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock, the problems we have on the A650 are well documented. Schools are filling up at an alarming rate, health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. Morley has no need for anymore industrial estates, warehouses, offices etc. While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communities. Brownfield sites such as Tingley Mills, land at the bottom of High Street, Bridge Street, Fountain Street and the many brownfield sites in Leeds, just to name a few should be developed first. IT appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

2. Employment Sites

A basic accessibility assessment has been undertaken for the Employment sites. In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network - within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;

The RAG approach we have added is based on the proximity to the core bus network:

- Green - Sites within 400 metres from the core network;
- Amber- Sites between 401 and 600 metres from the core network;
- Red - Sites over 600 metres from the core network.

It should be noted that the RAG assessment is based on the current network and should be used as an indication of the sites accessibility. A number of the larger sites are inevitably classed as Red due the size of the allocation (over 400m) and due to the fact the existing uses do not require bus services (i.e. they are Greenfield site). Where Amber and Red sites are brought forward, there will be an expectation of the developer to raise public transport levels to accessibility levels set out in the LDF policy i.e. 4 buses per hour to Leeds, Wakefield or Bradford.

[See representation submitted for full details and table of sites. This rep no. links to sites in Outer South West area]

Schools are filling up at an alarming rate, health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. Morley has no need for anymore industrial estates, warehouses, offices etc. While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communities. Brownfield sites such as Tingley Mills, land at the bottom of High Street, Bridge Street, Fountain Street and the many brownfield sites in Leeds, just to name a few should be developed first. IT appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

Representor No: PRS01978

Representation ID: REP05199 Question Ref: General comment

Employment sites and possible employment sites (could also be used for housing)
343 Gildersome 5.147ha, 1018B Topcliffe Lane 26.840ha, 112 Newpshaw Lane 16.305ha, 3007 Junction 27 Gildersome 3.708ha, 1064A Bruntcliffe Road 7.58ha. This last site also has conditions placed on it and those should be included in the LDF.
Development of all these sites which are close to the A650 would put a vast unacceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock, the problems we have on the A650 are well documented. Schools are filling up at an alarming rate, health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. Morley has no need for anymore industrial estates, warehouses, offices etc. While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communities. Morley has no need for anymore industrial estates, warehouses, offices etc. While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communities. Brownfield sites such as Tingley Mills, land at the bottom of High Street, Bridge Street, Fountain Street and the many brownfield sites in Leeds, just to name a few should be developed first. IT appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

Employment

Units B C & D Bracken Park & Overland Industrial Estate Gelderd Road Gildersome Ls27

Name: Ann Raistrick

Representor No: PRS02282

Representation ID: REP05219 Question Ref: General comment

Employment sites and possible employment sites (could also be used for housing)
343 Gildersome 5.147ha, 1018B Topcliffe Lane 26.840ha, 112 Newpshaw Lane 16.305ha, 3007 Junction 27 Gildersome 3.708ha, 1064A Bruntcliffe Road 7.58ha. This last site also has conditions placed on it and those should be included in the LDF.
Development of all these sites which are close to the A650 would put a vast unacceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock, the problems we have on the A650 are well documented. Schools are filling up at an alarming rate, health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. Morley has no need for anymore industrial estates, warehouses, offices etc. While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communities. Brownfield sites such as Tingley Mills, land at the bottom of High Street, Bridge Street, Fountain Street and the many brownfield sites in Leeds, just to name a few should be developed first. Morley has no need for anymore industrial estates, warehouses, offices etc. While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communities. Brownfield sites such as Tingley Mills, land at the bottom of High Street, Bridge Street, Fountain Street and the many brownfield sites in Leeds, just to name a few should be developed first. IT appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

Representor No: PRS02362

Representation ID: REP05240 Question Ref: General comment

Employment sites and possible employment sites (could also be used for housing)
343 Gildersome 5.147ha, 1018B Topcliffe Lane 26.840ha, 112 Newpshaw Lane 16.305ha, 3007 Junction 27 Gildersome 3.708ha, 1064A Bruntcliffe Road 7.58ha. This last site also has conditions placed on it and those should be included in the LDF.
Development of all these sites which are close to the A650 would put a vast unacceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock, the problems we have on the A650 are well documented. Schools are filling up at an alarming rate, health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. Morley has no need for anymore industrial estates, warehouses, offices etc. While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communities. Brownfield sites such as Tingley Mills, land at the bottom of High Street, Bridge Street, Fountain Street and the many brownfield sites in Leeds, just to name a few should be developed first. 2. Employment Sites

A basic accessibility assessment has been undertaken for the Employment sites. In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network - within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;

The RAG approach we have added is based on the proximity to the core bus network:

- Green - Sites within 400 metres from the core network;
- Amber- Sites between 401 and 600 metres from the core network;
- Red - Sites over 600 metres from the core network.

It should be noted that the RAG assessment is based on the current network and should be used as an indication of the sites accessibility. A number of the larger sites are inevitably classed as Red due the size of the allocation (over 400m) and due to the fact the existing uses do not require bus services (i.e. they are Greenfield site). Where Amber and Red sites are brought forward, there will be an expectation of the developer to raise public transport levels to accessibility levels set out in the LDF policy i.e. 4 buses per hour to Leeds, Wakefield or Bradford.

2. Employment Sites

A basic accessibility assessment has been undertaken for the Employment sites. In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network - within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;

The RAG approach we have added is based on the proximity to the core bus network:

- Green - Sites within 400 metres from the core network;
- Amber- Sites between 401 and 600 metres from the core network;
- Red - Sites over 600 metres from the core network.

It should be noted that the RAG assessment is based on the current network and should be used as an indication of the sites accessibility. A number of the larger sites are inevitably classed as Red due the size of the allocation (over 400m) and due to the fact the existing uses do not require bus services (i.e. they are Greenfield site). Where Amber and Red sites are brought forward, there will be an expectation of the developer to raise public transport levels to accessibility levels set out in the LDF policy i.e. 4 buses per hour to Leeds, Wakefield or Bradford.

Greenspace

East Ardsley Reservoir

Name: Trevor Sherborne
Representor No: PRS02724

Representation ID: REP05395 Question Ref: G7

On this plan, this site is open space audit. On plan 10.5B it is shown as natural green space. To me greenspace means grass, trees , open land, this site is Ardsley Reservior. All you do is walk around, you cannot play games or swim in the water. It still belongs to Yorkshire Water and they could stop public access anytime. I suppose the large green area on the map is to fool people into thinking, who do not live in the area, that we have a large area of greenspace. You cannot walk on the water, yet, take this out and we have not much, so called, greenspace left

Greenspace

Beeston Park Ring Road

Name: Jason Green
Representor No: PRS06321

Representation ID: REP07262 Question Ref: G1
Representation to Site Allocations Plan (Ref No. 563)

Part of the Dewsbury Road N1 greenspace corridor shown in the Site Allocations plan (Ref No. 563) should be deleted and considered for housing development. In return for the loss of greenspace an equivalent area of greenspace could be re-provided at Stank Hall Barn site, a location that is proposed for open space use in the Leeds Unitary Development Plan and the LDF Site Allocations Plan.

It is not envisaged that the whole of N1 greenspace corridor would be required for development. Development would still allow for the retention and maintenance of a narrower greenspace corridor.

The partial development of the greenspace corridor would generate a receipt from the disposal of the site that could then ring fenced and used to subsidise the cost of the restoration of Stank Hall Barn. Stank Hall Barn, which is a Grade II*listed building of significant importance, is currently on the Council's and English Heritage's register of buildings at risk.

The greenspace corridor sits between the Parkwood housing estate and Dewsbury Road and includes pedestrian routes across it. The houses on the south side of Parkwood Avenue have their rear gardens abutting the greenspace corridor. With no natural surveillance from adjacent properties the back gardens are therefore vulnerable. This vulnerability issue could be addressed through the partial development of the greenspace corridor by having proposed houses arranged with their back gardens abutting the rear gardens of those properties on Parkwood Avenue.

Representation ID: REP05629 Question Ref: G3

1. Introduction

This report outlines a consultation submission relating to land at Bradford Road/Chapel Street, East Ardsley ("the site"). The site is outlined in red on the plan and aerial image in section 2 of this report. *see pdf copy*

The report is being submitted in response to the Site Allocations Issues and Options Plan recently published by Leeds CC and should be read in conjunction with the completed online Site Allocations Plan Consultation form. This consultation was originally submitted on the 13 March 2013.

The aims of the report are to make a case for the removal of the current greenspace allocation on the site and to outline the suitability of the site for residential development.

The report will assess:

- o The current use and physical characteristics of the site.
- o Relevant planning policies relating to the site
- o The greenspace function of the site and other areas of greenspace in the area.
- o The merits of the site for residential development and identify any constraints that may exist.
- o Draw final conclusions

The report will now deal with each of these areas in turn.

2. Site Plans

See below. *see pdf copy*

3. Site Appraisal

The site extends to approximately 0.7ha or 1.73 acres and is back land situated behind the frontages of Bradford Road (A650) and Chapel Street in East Ardsley. East Ardsley is situated within the Leeds administrative district and is approximately 4 miles from Wakefield city centre and 6 miles from Leeds city centre. The site is within a few minutes drive of junction 41 of the M1 motorway. The site is currently used for vehicle and caravan storage and grazing purposes. A butchers shop and associated outbuildings form the site's frontage with Bradford Road (A650). The western half of the site where vehicles are informally stored is unsightly and an eyesore. The eastern half of the site is currently used to graze sheep and is fenced off around its entire boundary with post and rail and barbed wire fencing. There is no public access to the site or right of way over it. The site is located in a predominantly residential area surrounded on all sides by housing. The East Ardsley Conservative Club adjoins the site to the east. Boundaries are clearly defined by fencing and walls to all sides. The site slopes gently from north to south.

Vehicular access to the site is taken from Bradford Road (A650). There are no trees or hedgerows on site. There are no streams or ditches running through or adjacent to the site.

4. Planning

Policy

Planning policies that relate to the site are contained in the Leeds Revised Unitary Development Plan 2006 (RUDP) and the emerging Local development Framework (LDF) or recently renamed Local Plan.

Leeds Revised Unitary Development Plan

The RUDP makes provision for the long term use of land and buildings, providing a framework for local planning decisions. Decisions on planning applications are made in accordance with this plan unless other material considerations indicate otherwise. The site in question is allocated as greenspace in the RUDP. The site is protected under Policy N1 of the plan.

N1: DEVELOPMENT OF LAND IDENTIFIED ON THE PROPOSALS MAP AND CITY CENTRE INSET MAP AS PROTECTED GREENSPACE, WILL NOT BE PERMITTED FOR PURPOSES OTHER THAN OUTDOOR RECREATION, UNLESS THE NEED IN THE LOCALITY FOR GREENSPACE IS ALREADY MET AND A SUITABLE ALTERNATIVE SITE CAN BE IDENTIFIED AND LAID OUT AS GREENSPACE IN AN AREA OF IDENTIFIED SHORTFALL.

The RUDP written statement makes the following statements by way of explanation:

5.2.2 a greenspace should be an area "where the public has access to an open area with an existing or potential value for recreation and nature conservation".

5.2.3 "The underlying objectives of the UDP's policies for greenspace are as follows:

- i) to support the role of greenspace in providing for formal and informal outdoor recreation and nature conservation, as an integral and legitimate land use;
- ii) to ensure that greenspace is accessible and safe to those who use it, ...
- iii) to provide for a wide range of passive and active outdoor recreation opportunities as close to home as possible, giving priority to those housing areas with a relatively poor access to greenspace,
- iv) to aim to meet expressed, latent and future, formal and informal outdoor recreation demands through the retention, enhancement and provision of greenspace,
- v) to recognize the critical contribution greenspace plays in enhancing "quality of life", "sense of place" and the wider perception of the District as an attractive place to live, work, visit and in which to invest.

Policy SP1 concerns the protection of existing greenspace.

SP1: GREENSPACE IS PROTECTED AND ENHANCED AS AN IMPORTANT LAND USE IN ITS OWN RIGHT IN CONFERRING AMENITY, QUALITY OF LIFE AND A SENSE OF IDENTITY TO ESTABLISH COMMUNITIES AND PROPOSED EXTENSIONS.

Local Development Framework (LDF) / Local Plan

The LDF/Local Plan is currently being prepared to replace the Unitary Development Plan. When completed and approved the LDF/Local Plan will comprise of a Core Strategy together with Supplementary Planning Documents designed to deliver the spatial and land use strategy for the District. One such supplementary document is the Site Allocations Development Plan Document (DPD). The draft Site Allocations Issues and Options Report has been published recently. The site has retained its greenspace designation in the document and is identified as site 635 Parker Street Allotments at section 5.21 of the document and on Map 33. The site is categorized as allotment land. In conclusion in section 5.21 the document states that the Ardsley and Robin Hood Ward exceeds the recommended standard (provision) and so has surplus provision in terms of the quantity of allotments.

5. Assessment of Greenspace Function

Taking into account the preceding site and planning assessments, the following conclusions can be drawn on the greenspace function currently being provided by the site. The site is currently used for vehicle and caravan storage and the grazing of sheep. The majority of the site is fenced off. The only vehicle and pedestrian access to the site is an arduous access via a locked 5 bar gate to the rear of the butcher's shop off the A650. The site is not used for any form of formal or informal recreational purpose. The site is not used for allotment purposes. There are a handful of trees scattered around the site's boundaries and an intermittent hedgerow running through the centre of the site. There are no streams, ditches or watercourses running through the site. The potential for nature conservation on the site therefore appears minimal.

There is no public access to the site. The land cannot be seen to be "enhancing the quality of life" or "sense of place" for local residents and, if

Site Comments - Outer South West

Site reference: 635

Greenspace

Parker Street

Name: Neil Manock

Representor No: PRS03257

anything, part of the site could be perceived as an eyesore or nuisance. The land does not significantly contribute to the area being an attractive place to live and work....".

It can therefore be concluded that the site is currently not performing a greenspace function in the way the UDP allocation intended and that the greenspace allocation on this site is now inappropriate and should be removed as part of the review of allocations in the forthcoming Site Allocations Development Plan Document (DPD).

6. Other Greenspace

This particular location in East Ardsley enjoys a good provision of formal and informal recreational facilities. A large area of football pitches is situated just to the north of the site and East Ardsley cricket pitch is to the south of the site. East Ardsley also enjoys an urban fringe location with easy footpath access into the open countryside for the majority of residents. The Site Allocations Issues and Options Plan has incorporated a full review of greenspace provision and need within the Ardsley and Robin hood Ward. The review concludes that the ward is deficient in parks and gardens and outdoor sports facilities and play areas, but has a surplus in amenity, allotments and natural greenspace.

Due to the physical nature and location of the site and the constraints to public access already demonstrated, the site is not considered suitable for contributing towards the shortfall in parks, gardens and outdoor sports facilities. As the site is not performing an existing greenspace function and has limited potential to contribute to future greenspace requirements it can be concluded that the greenspace allocation on the site should be removed.

7. Suitability of the Site for Residential Development

Should it be accepted that the site is not performing a greenspace function, the site could be considered suitable for some form of residential development. The site is in a sustainable location. The site is situated in the middle of a residential area, surrounded by housing and with good access to local shops and amenities and the M1 motorway. There are no obvious physical constraints that would hamper the development of the site. Access to the site could be made available from Bradford Road or Chapel Street and Cherry Tree Walk subject to negotiations with third parties. Mains drainage and services are available in adjacent Chapel Street and Royston Hill. The site is not within a flood risk area.

There are no mature trees on site, no evidence of protected ecology and no public rights of way cross the site. The site is in a family ownership who would be willing participants to any development. The site is therefore available, suitable and deliverable for immediate residential development. Furthermore a residential allocation would bring the site into productive use and reduce the risk of the site deteriorating further and becoming a nuisance.

8. Conclusions/Recommendations

For the reasons outlined in this report we recommend that the current greenspace allocation on the site should be removed and not included in the forthcoming Site Allocations Development Plan Document. In addition we recommend that the site be allocated for residential development in the same Site Allocations Development Plan Document.

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Amber Sites outside the Core Public Transport Network

Table 2 below contains sites that are classified as 'Sites which have potential but issues or not as favoured as green sites' but fall outside 400m of the current core bus network. Consideration needs to be given to if this site would be able to meet the LDF public transport accessibility requirements should housing be brought forward. We are be minded to recommend that these site were not prioritised for housing until other more accessible site have been considered. Sites which fall marginally outside the 400m catchments and have high bus frequencies or are small low capacity sites are less of concern but are flagged up nonetheless.

Land Off Topcliffe Lane, Morley And to The North Of Capitol Park, Leeds

Name: P Coates

Representor No: PRS01948

Representation ID: REP05194 Question Ref: General comment

Employment sites and possible employment sites (could also be used for housing)

343 Gildersome 5.147ha, 1018B Topcliffe Lane 26.840ha, 112 Newpshaw Lane 16.305ha, 3007 Junction 27 Gildersome 3.708ha, 1064A Bruntcliffe Road 7.58ha. This last site also has conditions placed on it and those should be included in the LDF.

Development of all these sites which are close to the A650 would put a vast unacceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock, the problems we have on the A650 are well documented.

Schools are filling up at an alarming rate, health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. Morley has no need for anymore industrial estates, warehouses, offices etc. While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communities. Brownfield sites such as Tingley Mills, land at the bottom of High Street, Bridge Street, Fountain Street and the many brownfield sites in Leeds, just to name a few should be developed first. IT appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. Employment sites and possible employment sites (could also be used for housing)
343 Gildersome 5.147ha, 1018B Topcliffe Lane 26.840ha, 112 Newpshaw Lane 16.305ha, 3007 Junction 27 Gildersome 3.708ha, 1064A Bruntcliffe Road 7.58ha. This last site also has conditions placed on it and those should be included in the LDF.
Development of all these sites which are close to the A650 would put a vast unacceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock, the problems we have on the A650 are well documented. Schools are filling up at an alarming rate, health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. Morley has no need for anymore industrial estates, warehouses, offices etc. While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communities. Brownfield sites such as Tingley Mills, land at the bottom of High Street, Bridge Street, Fountain Street and the many brownfield sites in Leeds, just to name a few should be developed first. IT appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

Employment sites and possible employment sites (could also be used for housing)
343 Gildersome 5.147ha, 1018B Topcliffe Lane 26.840ha, 112 Newpshaw Lane 16.305ha, 3007 Junction 27 Gildersome 3.708ha, 1064A Bruntcliffe Road 7.58ha. This last site also has conditions placed on it and those should be included in the LDF.
Development of all these sites which are close to the A650 would put a vast unacceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock, the problems we have on the A650 are well documented. Schools are filling up at an alarming rate, health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. Morley has no need for anymore industrial estates, warehouses, offices etc. While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communities. Brownfield sites such as Tingley Mills, land at the bottom of High Street, Bridge Street, Fountain Street and the many brownfield sites in Leeds, just to name a few should be developed first. IT appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

Representation ID: REP05258 Question Ref: General comment

Employment sites and possible employment sites (could also be used for housing)
343 Gildersome 5.147ha, 1018B Topcliffe Lane 26.840ha, 112 Newpshaw Lane 16.305ha, 3007 Junction 27 Gildersome 3.708ha, 1064A Bruntcliffe Road 7.58ha. This last site also has conditions placed on it and those should be included in the LDF.
Development of all these sites which are close to the A650 would put a vast unacceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock, the problems we have on the A650 are well documented. Schools are filling up at an alarming rate, health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. Morley has no need for anymore industrial estates, warehouses, offices etc. While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communities. Brownfield sites such as Tingley Mills, land at the bottom of High Street, Bridge Street, Fountain Street and the many brownfield sites in Leeds, just to name a few should be developed first. IT appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

Name: Sterling Capitol

Representor No: PRS05764

Representation ID: REP06448 Question Ref: E1

Yes. Site CSM010 - Land Off Topcliffe Lane and to the north of Capitol Park Leeds

We note that plan 10.4 – Employment Outer South West includes the four sites that comprise Capitol Park Leeds i.e. sites refs: 2302835, 2302836, 2302837 and 2302750 and these are coded 'green'. However, we also note that the land to the north of Capitol Park i.e. site CSM010 (as illustrated on the attached copy of Plan 10.4) is coded 'amber'. Furthermore, it has not been included in Table 10.4.3 within the 'Site Allocations Plan Volume 2: 10 Outer South West' and there appears to be no separate assessment of this site (other than that for housing under site Refs 1018A and 1018B) within the published documents.

As outlined above under response to Question H3, the site is being promoted for future residential and employment development. For the reasons outlined above, we consider that it accords with draft Core Strategy Spatial Policy 1 and has clear potential for future allocation, not just for housing, but also employment. Given that the published documentation does not include the Council's assessment of this site in terms of potential for employment then we reserve the right to review and comment when these have been made available.

Name: Neil Dawson

Representor No: PRS05884

Representation ID: REP06631 Question Ref: E2

I would reiterate the need to exclude site CFSM010 from potential employment use as this would be detrimental the Green Belt around Morley.

Call For Sites

Land Off Topcliffe Lane, Morley And to The North Of Capitol Park, Leeds

Name: Michael Long

Representor No: PRS06750

Representation ID: REP07983 Question Ref: H7

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Red Sites outside the Core Public Transport Network

Table 3 below contains sites that are classified as 'Sites not considered suitable for allocation for housing' and fall outside 400m of the current core bus network. Consideration needs to be given to if this site would be able to meet the LDF public transport accessibility requirements should housing be brought forward. We agree that these sites would not be suitable for housing development.

[see table in full representation submitted which lists sites]

Representation ID: REP08105 Question Ref: E2

2. Employment Sites

A basic accessibility assessment has been undertaken for the Employment sites. In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network - within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;

The RAG approach we have added is based on the proximity to the core bus network:

- Green - Sites within 400 metres from the core network;
- Amber- Sites between 401 and 600 metres from the core network;
- Red - Sites over 600 metres from the core network.

It should be noted that the RAG assessment is based on the current network and should be used as an indication of the sites accessibility. A number of the larger sites are inevitably classed as Red due the size of the allocation (over 400m) and due to the fact the existing uses do not require bus services (i.e. they are Greenfield site). Where Amber and Red sites are brought forward, there will be an expectation of the developer to raise public transport levels to accessibility levels set out in the LDF policy i.e. 4 buses per hour to Leeds, Wakefield or Bradford.

Representation ID: REP07752 Question Ref: R3

Site CFSM019

Sections 7.9 - 7.11 advises that some of the centres have nearby opportunities for new retail development and, where these exist, have been identified. It also states that, where retail is related to the centre, that the boundary will be revised, where possible. In Volume 2 the southerly part of our client's site, fronting Dewsbury Road is one such opportunity which has been identified adjacent to the Tommy Wass proposed centre. We consider that 1 acre of the site, fronting Dewsbury Road is a suitable retail opportunity which exists directly adjacent to the proposed centre (and notwithstanding that the use is already a 'town centre use', offices, and could be included on that basis) should be included within the boundary as a retail opportunity site. It is not physically detached from the centre in any way and we do not consider that there is any reason why it should not form part of this new centre. Indeed, should the retail opportunity be realised at this site, this would help re-enforce and consolidate the new centre and regenerate an underused site. Furthermore, the allocation of the site meets with the core planning principles identified in the NPPF, particularly in proactively driving and supporting sustainable economic development to deliver a thriving local place, responding positively to opportunities for growth and delivering missed use developments on brownfield sites.

We support the inclusion of the Tommy Wass as a new proposed centre, but note that the boundary on Plan 10.2 extends directly to the west of our client's site, but does not include it. However, within table 10.2.4 the comments section confirms that the site, reference: CFSM019, is already located in the centre and that retail is acceptable, pending other planning consideration. We respectfully request that given the existing office use of the site and confirmation that the site represents a suitable retail opportunity site, that the section fronting Dewsbury Road is included within the centre boundary as it appears that it's exclusion from the boundary is an error, as it is inconsistent with table 10.2.4. With no other sites within the Tommy Wass boundary, there is little, or no, further opportunity to promote further investment in the centre. Accordingly, our client's site represents the only sustainable allocation to allow any potential future needs of the local area to be met within the plan period. Furthermore, we agree and support the Council's assessment of sites under 10.2.4, that our client's site represents the most sequentially preferable site put forward under the call for sites exercise and therefore meets with the requirements of the NPPF and Core Strategy, which seek to promote a centre first strategy. We support the proposed allocation of the front part of the site for retail, as part of a wider mixed use development.

Under indicators SA1 and SA2, the site is rated as poor with regard to maintaining or improving employment sites and conditions to allow economic growth and investment. No account has been taken that the current site experiences vacancies and the site is continuously marketed. Conversion to retail will secure a higher number of permanent jobs within the area, for people who live near the area and would support equal employment opportunities. Furthermore, if included within the Tommy Wass centre, would help secure the role of the centre and lead to further investment in the local area. Also, as part of a wider mixed use development, a range of uses, including employment, could be promoted. We therefore consider that the scores of SA1 and SA2 should be increased to neutral or good.

Indicator SA11 relates to the re-use of brownfield land and promoting the services for communities. The site is rated as good. It is a brownfield site directly adjacent the Tommy Wass centre and in close proximity to a large residential population. We consider the redevelopment of this site for retail will secure jobs and services for the local population and therefore should be classed as very good.

Indicator SA15 relates to the transport network and the provision of services, reducing the need to travel by means other than the car. The site has been rated as good, we consider that the redevelopment to retail would help improve the retail offer in Tommy Wass, thereby significantly reducing the need for the local population to travel by car to other locations. It will also provide a local service, easily accessible by pedestrians and cyclist. Furthermore, the site is well serviced by public transport on Dewsbury Road. On this basis, we consider that the site should be rated very good.

Representation ID: REP05773 Question Ref: R1

SUGAR MILL SITE, LAND AT OAKHURST AVENUE/DEWSBURY ROAD, LEEDS LS11 7DF

LEEDS LOCAL DEVELOPMENT FRAMEWORK: SITE ALLOCATIONS DPD: ISSUES AND OPTIONS

We enclose a pro-forma on behalf of our client "Highcross" relating to the above consultation event seeking views on the Allocations DPD Issues and Options document.

Background

We submitted an earlier representation as part of the Call for Sites in March 2012 (letter dated 29th March 2012) seeking inclusion of the site within the Tommy Wass (Dewsbury Road) Local Centre. This was under representation reference CFSM019. At that time the emerging LDF Core Strategy identified the site as adjoining the local centre. Our earlier representation highlighted that the centre had very limited convenience shopping provision and was relatively run down in appearance and in need of regeneration and investment. The representation sought inclusion of the wider site within the centre boundary as appropriate for mixed use development including retail, employment and housing.

Our comments below in relation the Issues & Options Site Allocations DPD relates to the 'Outer South West Retail Issues & Options' with particular reference to retail matters (paragraph 10.2.0). We deal with matters below using the 'Questions on Retail Issues and Options' set out under paragraph 10.2.4. In particular we address QR1 and QR3.

QR1 — Do you have any comments on the proposed centre and Primary Shopping Area (PSA) boundary? Please state the centre/s to which your comments relate.

Our comments below relate to the Tommy Wass Local Centre (Plan 10.2G) and assessment of Call for Sites under paragraph 10.2.4.

The Issues & Options document indicates that a review of each centre boundary in the outer south west area was carried out along with a survey of current uses. This included the Tommy Wass local centre. The text (paragraph 10.2.2) highlights this involved redefining boundaries of centres to accommodate retail development within centres. The document further indicates that the Council is not allocating sites for retail in the various centres (including Tommy Wass) but by making boundary changes the Council intends this to provide scope to accommodate additional retailing.

In relation to the "Call for Sites" process and comments by officers following assessment of those representations, paragraph 10.2.4 of the Issues & Options Allocations DPD indicates that the representation site is regarded as being located within the Tommy Wass local centre. We welcome recognition of the inclusion of the site in the centre and therefore the future contribution it could make to the wider retail and service offer in the centre. However, we would request that the local centre boundary, as shown on Plan 10.2G, be amended to reflect its intended inclusion in the defined Tommy Wass centre.

In light of the above we would ask that the boundary defining the extent of the Tommy Wass local centre be corrected to reflect the conclusions reached in the assessment of sites put forward as part of the Call for Sites consultation. This identifies the representation site as being 'in centre' and that 'retail is acceptable use pending other planning considerations'.

Representation ID: REP07511 Question Ref: R3

We support conclusions reached in relation to the inclusion of the representation site (CFSM019) within the defined Tommy Wass local centre boundary. We request that the boundary, as drawn in the Issues & Options document, be extended to reflect the conclusions reached in the assessment of sites put forward as part of the 'call for sites' process.

Representation ID: REP07477 Question Ref: R3

We support conclusions reached in relation to the inclusion of the representation site (CFSM019) within the defined Tommy Wass local centre boundary. We request that the boundary, as drawn in the Issues & Options document, be extended to reflect the conclusions reached in the assessment of sites put forward as part of the 'call for sites' process.

We trust the above comments and enclosed pro-forma will be taken into account as the Allocations DPD moves forward to the next stage.

If you require any further information at this stage, please do not hesitate to contact me.

Representation ID: REP07983 Question Ref: H1

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Green Sites outside the Core Public Transport Network

Table 1 below contains sites that are classified as 'Sites which have potential to be allocated for housing' but fall outside 400m of the current core bus network. Consideration needs to be given to if these sites would be able to meet the LDF public transport accessibility requirements should housing be brought forward. Significant developer contributions will be required at these sites to improve the public transport to meet the council LDF accessibility policies; particularly in the larger sites should these be brought forward for development. These include SHLAA ref: 2062, 1032, 1046, 1017 & 1055.

Sites which fall marginally outside the 400m catchments and have high bus frequencies or are small sites low capacity are less of concern but are flagged up nonetheless.

The table also includes accessibility assessments results to access other services and facilities within acceptable journey times on public transport.

[see table in full representation submitted which lists sites]

Representation ID: REP08105 Question Ref: E2

2. Employment Sites

A basic accessibility assessment has been undertaken for the Employment sites. In order to assess the site we have considered the following accessibility criteria:

• Access to the Core Bus Network - within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;

The RAG approach we have added is based on the proximity to the core bus network:

- Green - Sites within 400 metres from the core network;
- Amber- Sites between 401 and 600 metres from the core network;
- Red - Sites over 600 metres from the core network.

It should be noted that the RAG assessment is based on the current network and should be used as an indication of the sites accessibility. A number of the larger sites are inevitably classed as Red due the size of the allocation (over 400m) and due to the fact the existing uses do not require bus services (i.e. they are Greenfield site). Where Amber and Red sites are brought forward, there will be an expectation of the developer to raise public transport levels to accessibility levels set out in the LDF policy i.e. 4 buses per hour to Leeds, Wakefield or Bradford.

The Tommy Wass lower order local centre is a reasonable designation of shops around a suburban cross roads on the A653 Dewsbury Road as it enters Leeds proper, though it might be suspected that one day there will be a call for demolitions to allow a new crossroads to be laid out. Proposed extensions CFSM019 and CFSM023 are reasonable in themselves and might replace floorspace lost in any crossroads alterations.

Name: Tom Leadley

Representor No: PRS07137

Representation ID: REP08217 Question Ref: H1

Agree with green allocation

Representation ID: REP08219 Question Ref: R3

NPPF guidance defending town and city centres makes clear that out-of-town centres like the White Rose Shopping Centre should not be designated as LDF retail centres. The suggested mixed retail and housing at White Rose also seems unacceptable. Plan 10.2H shows "call for sites" out-of-centre retail bids at sites CFSM006, CFSM040, CFSM047, to all of which we object. The first two would divert retailing away from established centres, and the third additionally would be in Green Belt. The Tommy Wass lower order local centre is a reasonable designation of shops around a suburban cross roads on the A653 Dewsbury Road as it enters Leeds proper, though it might be suspected that one day there will be a call for demolitions to allow a new crossroads to be laid out. Proposed extensions CFSM019 and CFSM023 are reasonable in themselves and might replace floorspace lost in any crossroads alterations.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Green and Amber Sites within the Core Public Transport Network

Table 4 below contains sites that are classified as 'Sites which have potential to be allocated for housing' and 'Sites which have potential but issues or not as favoured as green sites' that fall within 400m of the current core bus network.

The sites in this list are supported for housing growth.

Site specific mitigation would be required but it is unlikely that substantial bus service provision would be required at these sites (based on the current public transport network)

From a public transport perspective, we would encourage the prioritisation of these sites based on the proximity to the core public transport network and the bus service frequency levels.

[see table in full representation submitted which lists sites - amber sites are linked to this comment]

Call For Sites

Wakefield Road, Gildersome, Morley, Leeds

Name: Joseph Rowntree Housing Trust

Representor No: PRS05780

Representation ID: REP06462 Question Ref: H7

I am writing on behalf of our client, Joseph Rowntree Housing Trust, in response to the consultation on the Issues and Options version of the Site Allocations Plan, and in particular a parcel of land off Wakefield Road in Gildersome. The site is referenced 3007, CFSM040 and 2301611.

The site was allocated in the Unitary Development Plan under reference E3B:7 for industry/warehousing and ancillary offices. The current consultation document includes details of the site under Table 10.4.1 of Volume 2, document 10 – Outer South West which lists "sites for office development." It appears the site has been included in this table because planning permission was granted under reference 23/360/03/RE for office development. The table is quite right to note the permission has now lapsed and to reflect the most up to date status of the land at the time the consultation was drafted.

There does however appear to be some conflicts within Volume 2, document 10 - Outer South West which shows the site to be rejected for a mixed use scheme on Plan 10.3, but then shows the site to benefit from planning permission/allocation for a mixed use scheme on Plan 10.4 and be identified for office development under Table 10.4.1.

Irrespective of the content of the current consultation document, we wish to bring to your attention how events have now moved on again. Since the consultation document was published Planning Committee has resolved to grant planning permission for a mixed use scheme comprising B1, B2, C1, A3 and A4 uses under reference 10/04597/OT subject to the signing of a Section 106 Agreement. The intention to grant planning permission means that details of the site under Table 10.4.1 of Volume 2, document 10 are now out of date and incorrect, especially given the predominant use is no longer for offices. We expect planning permission to be confirmed after 9th August.

Once the site has a valid planning permission it becomes a 'commitment' and part of the Council's supply of land. As you will be aware, the allocation of land is only required where a site does not benefit from planning permission in order to establish the principle of development is acceptable and to establish a future supply of land for development. Where a site has planning permission then not only has the principle been established, but the status of the site as part of the Councils' land supply has been confirmed. We therefore believe details of the site only need to be noted as part of the Council's supply of land. Once planning permission has been confirmed, the site will not therefore need to be specifically allocated within the Local Plan for development. This point also applies to other sites within the document (and listed under Table 10.4.1 and 10.4.2) that have planning permission and therefore do not need to be specifically allocated for development. On the basis of the process for preparing Local Plans, we hope the list of commitments under Table 10.4.1 and 10.4.2 is simply to provide an explanation of those sites that contribute to the land supply rather than the Council's intention to allocate the land in the Site Allocations Plan. The list will however need to be updated as the process progresses.

In terms of those sites which were allocated in the UDP, but do not benefit from planning permission, there is an additional point to make in terms of procedures for preparing Local Plans. The point is that previous allocations cannot simply be carried forward. It is necessary to undertake an assessment to determine the deliverability of the sites in order to determine whether they will contribute to the land supply during the Plan period or should in fact be deleted because they are unlikely to come forward. In the case of the Leeds Site Allocations Plan it is also necessary to undertake such an assessment of UDP allocations to be carried forward because the sites have not previously been subjected to the necessary Sustainability Appraisal.

We do however appreciate that where planning permission has expired then it is appropriate to allocate land in order to re-establish the principle of development. This is however no longer the case with the land off Wakefield Road, Gildersome.

We will write again once planning permission has been confirmed in order to update you on the situation.

I hope you will reflect the points made in this letter in the next version of the Site Allocations Plan.

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Red Sites within the Core Public Transport Network

Table 5 below contains sites that are classified as 'Sites not considered suitable for allocation for housing' that fall within 400m of the current core bus network. From a public transport perspective, these sites (in principle) would be acceptable for housing development. For the larger sites, site specific mitigation would be required but it is unlikely that substantial bus service provision would be required at these sites (based on the current public transport network).

[see table in full representation submitted which lists sites]

Representation ID: REP08105 Question Ref: General comment

2. Employment Sites

A basic accessibility assessment has been undertaken for the Employment sites. In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network - within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;

The RAG approach we have added is based on the proximity to the core bus network:

- Green - Sites within 400 metres from the core network;
- Amber- Sites between 401 and 600 metres from the core network;
- Red - Sites over 600 metres from the core network.

It should be noted that the RAG assessment is based on the current network and should be used as an indication of the sites accessibility. A number of the larger sites are inevitably classed as Red due the size of the allocation (over 400m) and due to the fact the existing uses do not require bus services (i.e. they are Greenfield site). Where Amber and Red sites are brought forward, there will be an expectation of the developer to raise public transport levels to accessibility levels set out in the LDF policy i.e. 4 buses per hour to Leeds, Wakefield or Bradford.

Plan 10.2H shows "call for sites" out-of-centre retail bids at sites CFSM006, CFSM040, CFSM047, to all of which we object. The first two would divert retailing away from established centres, and the third additionally would be in Green Belt.

Agree with red allocation

Representation ID: REP08219 Question Ref: R3

NPPF guidance defending town and city centres makes clear that out-of-town centres like the White Rose Shopping Centre should not be designated as LDF retail centres. The suggested mixed retail and housing at White Rose also seems unacceptable. Plan 10.2H shows "call for sites" out-of-centre retail bids at sites CFSM006, CFSM040, CFSM047, to all of which we object. The first two would divert retailing away from established centres, and the third additionally would be in Green Belt. The Tommy Wass lower order local centre is a reasonable designation of shops around a suburban cross roads on the A653 Dewsbury Road as it enters Leeds proper, though it might be suspected that one day there will be a call for demolitions to allow a new crossroads to be laid out. Proposed extensions CFSM019 and CFSM023 are reasonable in themselves and might replace floorspace lost in any crossroads alterations.

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Red Sites within the Core Public Transport Network

Table 5 below contains sites that are classified as 'Sites not considered suitable for allocation for housing' that fall within 400m of the current core bus network. From a public transport perspective, these sites (in principle) would be acceptable for housing development. For the larger sites, site specific mitigation would be required but it is unlikely that substantial bus service provision would be required at these sites (based on the current public transport network).
