1282 - Green to Red

Local road for access already at capacity, alarming peak time congestion. Local facilities at capacity.

Name: Adam C Jones

Representor No: PRS00141

Representation ID: REP00916 Question Ref: H1

Green to red. Local road for access already at capacity. Local facilities at capacity.

Name: Brian Guy

Representor No: PRS00142

Representation ID: REP04659 Question Ref: H1

1282 Laneside Farm, Site Capacity 542, Ward Morley North

Development of this site would complete the merger of the communities of Morley and Churwell. It is an important green space between the two. Access onto Victoria Road (A643) either from King George Avenue or from some new site entrance is difficult if making the journey to Leeds. The local infrastructure cannot cope with such an addition.

Representation ID: REP05381 Question Ref: H1

As residents of Churwell, we are writing with regard to the proposed housing development sites within our local community. We all share the boundary of one of the sites in question, Site 1220A 'Land East of Churwell', and are particularly concerned over any possible proposal to build in this location.

We understand this is currently classified as 'Amber: Sites which have potential but issues / not as favoured as green sites'.

As clearly some of the issues have already been identified, we would like to re-iterate and clarify some of the issues that are of greatest concern to us as residents immediately neighbouring this location.

Churwell Hill / Elland Road is the main road from Morley towards Leeds, and as such suffers from a very high volume of traffic, particularly at commuting hours, when the traffic is at standstill to and from the Ring Road. This road does not have the ability to cope with greater volumes of traffic passing through the area, without creating greater risks to safety (cyclists, pedestrians, drivers) and increased congestion. This has already been identified as an issue as there are a number of speed cameras within a short space along this road.

This particular site, lies next to a busy train line, again posing dangers to locals, as it is not unusual for us to see people walking next to or crossing over the train line. This risk would only increase with additional housing in the area. Additionally, we understand the site has been identified as a historical land-fill area, again highlighting unsuitability.

Regarding the 6 sites identified in Churwell overall, the general infrastructure within the village is not of a scale that could accommodate such volumes of new houses, schools, doctors, dentists, and services in general would not be able to take on a new influx of residents.

Based on these, and other points, we strongly support the re-classification of this area (Site 1220A), and the other proposed Churwell sites, to colour code 'Red: Sites not considered suitable for allocation of housing'. Instead, we would ask the Planning Department to look at the areas within Leeds City Council that already have planning permission, and also, to revitalise housing currently standing empty, rather than look to build on Greenfield areas.

Name: S Smith

Representor No: PRS00272

Representation ID: REP00913 Question Ref: H1

Too much traffic and not any open spaces for children to play. Over built area already. Schools, doctors etc full.

Name: Hannah Gill

Representor No: PRS00278

Representation ID: REP02219 Question Ref: H1

Lack of infrastructure I.E poor road capacity, no school places and this is valued as public open space/green belt.

Representation ID: REP02230 Question Ref: H1

1282I am writing to voice my objection to Leeds City Councils LDF Site allocation plans in Churwell.

I have lived in Churwell since August 2000. We moved here because we were impressed by the green spaces around and the woodland area which surrounds our home. We also access Pit Hill for walking and the fantastic views across Leeds. During the Autumn there is a community bonfire which is attended by many of the local people. In winter and snowy weather it is used for sledging and again an opportunity for the local people to have recreational enjoyment.

Despite what the farmer who owns the land says it has only been ploughed twice since I have lived here. Once was just before the application for Village green status! It has always been an open space for people to enjoy. It would be a tragedy for it to be built on not only because of the impact on local people and the loss of yet another green area but the devastating impact on traffic along Churwell Hill.

Anyone who uses Churwell Hill on a daily basis to get to work has a constant battle and sometimes the traffic is backed up to the top of Westwoodside. The building of the 'New Village' has added to the chaos and that project should be a warning to planners of the negative impact thoughtless building has on a community. The road itself is breaking up under the pressure of the traffic. Heavy plant and construction would cause further inconvenience to motorists at peak times. It is to my mind, a vision of hell.

Whilst living in Churwell I have been unable to access a local dentist as they are all chock a block. I have to travel to Bromley to have my teeth seen to. I have also seen the growth of the local school and the fact that many of my neighbour's children cannot get a place there.

Churwell is a lovely place to live but it appears that due to its very popularity planners see it as an easy target to build on. Surely there are lots of areas around Leeds that could be used or is there some political agenda going on. I am not a NIMBY as I realise that people need homes but there is also a need for open spaces for those people to enjoy.

It would be totally unsustainable if the proposed 1248 were to be built in Churwell. The plans should at least include provision for a new Primary school, High school, medical centre, church and shops as well as creating a way into the Village that does not involve spilling onto Churwell Hill. Without the infra structure it would be untenable.

I hope that sense prevails over profit and these plans are altered or dropped completely. I for one would be happy to take civil action against any of these plans. It seems that there is no real need in this area for this housing and the introduction of at least 5000 people and possibly over 3000 extra cars which would add pollution and overcrowding of already overcrowded amenities. How many people on the planning committee live in Morley or Churwell or would consider moving into these superfluous dwellings? Leave Churwell alone and let us enjoy what remains of the open spaces we have.

It would be a great shame if Churwell Park were to be the only green space left in Churwell.

Yours truly,

Name: M Oddy

Representor No: PRS00297

Representation ID: REP02236 Question Ref: H1

1282 - Green to red. Because Churwell Hill is far too busy, Churwell schools are full to capacity as are schools in Morley. These plans are ridiculous.

Name: Eric And Joyce Todd

Name: Janet Harrison

Representor No: PRS00304

Representation ID: REP02245 Question Ref: H1

Site 1282 - Laneside Farm (suggested capacity 542 houses).

Site 2125 - Manor House Farm (suggested capacity 77 houses).

I WISH THE ABOVE SITES TO BE COLOUR CODED RED

I wish to object to the above plans for the following reasons:-

Traffic Congestion; Elland/Victoria Road which runs the length of Churwell has an enormous amount of traffic during the main rush-hour and now a days during the off peak hours as well. How would building an estimated 1,248 houses, all of which will need to use this road for access, be of anything but disastrous for the local community of Churwell. Surely the extra traffic would bring the Outer Leeds Ring-road to a halt. If you are not of the same opinion please write to me and convince me otherwise.

Schools; Churwell Primary School is 2-form and is full. Local residents are being turned away as it is. The proposed building will be nearer to the school enabling them to gain priority above many of the current local residents. Increasing CPS to 3-form would bring capacity for 360 children. A number that now where near meets the needs of 1,248 houses. Is LCC prepared to build a school with the infrastructure to cope with the influx? Our 3 High Schools are also at capacity. Are you planning on building a new High School as Well?

Doctors & Dentists; There is no dentist in Churwell and only 1 Doctors Surgery. Dentists in Morley are full and most only take new private patients. This is the situation now and if there is no new infrastructure along with the new housing then it will become very difficult in Churwell and Morley to obtain the basic essentials for healthy living.

Access; The roads to the proposed sites are already under pressure of traffic, indeed on some access roads the traffic is reduced to single file because of cars parked outside domestic property. Churwell New Village is appalling re the way car-parking was under calculated by the Developers and approved by Leeds City Council. It is impossible to drive a vehicle along some streets as the roads are congested with parked cars owned by the residents. How is access to be guaranteed to the new housing when it will have to travel on these congested roads?

Loss of Green Space; Site 1282 is the only green-space which separates Churwell from Morley's suburbs. These field are presently farmed and have public footpaths for access into this small bit of countryside. The area is well used by the local residents of Churwell and Morley. It is inconceivable that you wish to remove this asset and merge Churwell into Morley by filling this much appreciated green-space with housing.

Site 2125 was last year the subject of a 'Village Green' application and supported by letters of over 150 local residents in support of this application. These applications came for people who had roamed freely over this land for more than 20 years. There were as many applications submitted by people who had roamed for less than 20 years. If you read the Inspectors report the failure of this application was on a technicality and not because it was found that people had not and do not use this land for recreational purposes. Your proposals will fill this land with unnecessary housing and remove the last remnants of land where our children can get outside and observe the flora and fauna in our local community.

Brownfield Sites; Leeds has enough brownfield sites in which to start building the housing numbers recommended in the LDF. Make the Property Developers use this not the easier and cheaper green spaces they are lobbying hard to use.

Twenty years ago I had the choice to live and work in Leeds or Manchester. I chose Leeds because it had a vision and integrity towards its building plans, leaving spaces between the various localities, which gives a sense of space and a feeling of belonging to an individual area.

Manchester's rambling urban sprawl, where you have no idea what town you are in let a lone what area of Manchester sent a shudder down my spine.

Please, please don't turn Leeds into the same endless urban environment by allowing mass housing to be built on small green-space between the existing local areas. I will not be the only person who, considering where to live will feel Leeds has a unique balance. I know you have to have a vision to improve Leeds. You also have a responsibility not to spoil it for the generations to come.

Representation ID: REP04786 Question Ref: H1

1282 Laneside Farm, Site Capacity 542, Ward Morley North

Development of this site would complete the merger of the communities of Morley and Churwell. It is an important green space between the two. Access onto Victoria Road (A643) either from King George Avenue or from some new site entrance is difficult if making the journey to Leeds. The local infrastructure cannot cope with such an addition.

Representation ID: REP02254 Question Ref: H1

Referring to the LDF sites in the Morley area I would like to present my objections as follows:-

The Green areas:-

Site 1282 - Laneside Farm (suggested capacity 542 houses).

Site 2125 - Manor House Farm (suggested capacity 77 houses).

Objection to the above because of the situations regarding:-

SCHOOLS - For many years now we have had problems finding places for our children in Morley/Churwell schools. After discussions with the Education Department we did manage to obtain an additional class intake at Asquith School but all other schools are full to capacity with no more room for extra classes or extensions. Can you find money to build new schools or areas to put them?

TRAFFIC — Elland Road is the main road to Leeds from Morley and is already "nose to tail" during the rush hour every day. It is used often by Ambulances, Police, etc. during these periods which does often cause problems it being a narrow road with bends and narrow pavements through a built up area. I personally have had three vehicles into my fence/wall.

FACILITIES — Dentists/Doctors. These facilities already have problems with the local Doctors very often being unable to offer appointments in less than a week.

We are already really worried about the extra problems the Daisy Hill development will cause without adding the unbelievable numbers of housing to an already saturated area.

I sincerely trust you will give the above comments your consideration and look at this matter in a sensible way by transferring ALL OF THESE SITES TO RED.

Representation ID: REP02462 Question Ref: H1

1282 - Green to red.

No more houses in Churwell!

- 1) Churwell has already over a sustained period of time undergone a major development in the building of houses. The infrastructure in the area cannot cope with any more.
- 2) I have lived in Morley all my life and we know that school places are already at a premium and as a we still only have the same 3 senior schools that were here 45 years ago when I started.
- 3) Churwell Hill is extremely busy and will only get busier if further homes are built and become more dangerous.
- 4) Doctors and dentists will not be able to cope.
- 5) Is Morley to be totally devoid of any green, recreational land for people to enjoy?
- 6) What about North Leeds being used for the building of more houses!!

Name: Karen Smith

Churwell is already overloaded - doctors, schools, dentists, etc.

Name: Eric Newton

Representor No: PRS00577

Representation ID: REP05334 Question Ref: H1

As residents of Churwell, we are writing with regard to the proposed housing development sites within our local community. We all share the boundary of one of the sites in question, Site 1220A 'Land East of Churwell', and are particularly concerned over any possible proposal to build in this location. We understand this is currently classified as 'Amber: Sites which have potential but issues / not as favoured as green sites'. As clearly some of the issues have already been identified, we would like to re-iterate and clarify some of the issues that are of greatest concern to us as residents immediately neighbouring this location. Churwell Hill / Elland Road is the main road from Morley towards Leeds, and as such suffers from a very high volume of traffic, particularly at commuting hours, when the traffic is at standstill to and from the Ring Road. This road does not have the ability to cope with greater volumes of traffic passing through the area, without creating greater risks to safety (cyclists, pedestrians, drivers) and increased congestion. This has already been identified as an issue as there are a number of speed cameras within a short space along this road. This particular site, lies next to a busy train line, again posing dangers to locals, as it is not unusual for us to see people walking next to or crossing over the train line. This risk would only increase with additional housing in the area. Additionally, we understand the site has been identified as a historical land-fill area, again highlighting unsuitability. Regarding the 6 sites identified in Churwell overall, the general infrastructure within the village is not of a scale that could accommodate such volumes of new houses, schools, doctors, dentists, and services in general would not be able to take on a new influx of residents. Based on these, and other points, we strongly support the re-classification of this area (Site 1220A), and the other proposed Churwell sites, to colour code 'Red: Sites not considered suitable for allocation of housing'. Instead, we would ask the Planning Department to look at the areas within Leeds City Council that already have planning permission, and also, to revitalise housing currently standing empty, rather than look to build on Greenfield areas.

Name: Josephine M Barton

Representor No: PRS00578

1282- Change suggested Red, Back to green belt not enough schools etc infrastructure not in place.

Name: Ward

Representor No: PRS00709

Representation ID: REP02711 Question Ref: H4

1282 / 2125 – Change to red for the following reasons:

- The increase in traffic in the area – many on Churwell Hill, has already increased from the opening of Tesco.
- The increase in children trying to find a school nearby. It was bad enough 15 years ago when we had to find alternative schools.
- Living in the middle of an over populated area – estate after estate, after estate – causing an increase in crime
- How long will be waiting for doctors / dentists etc
- Massive traffic increase – since Churwell new village, Churwell is a traffic jam now instead of what it was – a quiet village.

1282 / 2125 -

I wish to object to the above plans for the following reasons:-

Do the members of the Leeds City Planning Dept. actually care about the people who live in or around the sites they plan to develop, or do they only see increased council tax revenues. If they lived in the areas affected by the above proposals they would certainly think again.

The plan to also build several hundred houses on Daisy Hill will cause many traffic problems at the top of King George Ave, Croft House Road, and New Bank Street. These roads all come out onto Elland Road or roads connecting at the top of Churwell Hill. From St Peters Church all the way to Churwell to the roundabout near the Dry Salter's Arms it is one long traffic jam every morning and every evening. It takes at least 30-45 mins to cover 1 1/2 miles and then another 30-45 mins to actually get into Leeds. Throughout the day Elland Road up through Churwell is a busy road.

Upwards of 1500 houses are planned on all sites, on today's average of 1.5 cars per household that will mean another 2250 cars from King George Ave, Sandmead Close, Westwood Side, Harwell Ave, and New Village Way all coming out onto Elland Road in the Churwell area. Elland Road can't cope with the present traffic, without this increased volume. Or have the planners requested that the developers put new roads in these areas so traffic is diverted away from Elland Road.

Also what about the basic infrastructure of the area schools, shops, community centres, environmental issues etc. have any of these been looked at? Or do the planners only see £ signs, over the past 40 years Churwell/Morley has had more than its share of house building, and it's about time Leeds Council looked elsewhere to raise money.

Sincerely trust you will give the above comments your consideration and look at this matter in a sensible way by transferring ALL OF THESE SITES TO RED.

Representation ID: REP02867 Question Ref: H4

1282 / 2125 -

Re: LDF SITES IN MORLEY

The Green areas:-

Site 1282 - Laneside Farm (suggested capacity 542 houses).

Site 2125- Manor House Farm (Pit Hill & Allotments)(suggested capacity 77 houses).

I wish to object to the above plans for the following reasons:-

Do the members of the Leeds City Planning Dept. actually care about the people who live in or around the sites they plan to develop, or do they only see increased council tax revenues. If they lived in the areas affected by the above proposals they would certainly think again.

Representation ID: REP05297 Question Ref: H1

Land Side Farm 1282. Keep Red.

This land has been designated for building, but has a change of levels from road to site of at least 3 meters, which would make access difficult. Adjoining housing estates already have badly congested roads and would not be able to take traffic from such a large site. This site is prime farm land and should be protected for the production of food. It seems short sighted for a island country to rely entirely on food imports. Perhaps people would complain less about future developments if new housing stock was spread more evenly around the city, and if developers were made to use brown field sites first. Maybe imposing a levy from building on green sites would help.

Representor No: PRS01514

Representation ID: REP05332 Question Ref: H1

As residents of Churwell, we are writing with regard to the proposed housing development sites within our local community.

We all share the boundary of one of the sites in question, Site 1220A 'Land East of Churwell', and are particularly concerned over any possible proposal to build in this location.

We understand this is currently classified as 'Amber: Sites which have potential but issues / not as favoured as green sites'.

As clearly some of the issues have already been identified, we would like to re-iterate and clarify some of the issues that are of greatest concern to us as residents immediately neighbouring this location.

Churwell Hill / Elland Road is the main road from Morley towards Leeds, and as such suffers from a very high volume of traffic, particularly at commuting hours, when the traffic is at standstill to and from the Ring Road. This road does not have the ability to cope with greater volumes of traffic passing through the area, without creating greater risks to safety (cyclists, pedestrians, drivers) and increased congestion. This has already been identified as an issue as there are a number of speed cameras within a short space along this road.

This particular site, lies next to a busy train line, again posing dangers to locals, as it is not unusual for us to see people walking next to or crossing over the train line. This risk would only increase with additional housing in the area. Additionally, we understand the site has been identified as a historical land-fill area, again highlighting unsuitability.

Regarding the 6 sites identified in Churwell overall, the general infrastructure within the village is not of a scale that could accommodate such volumes of new houses, schools, doctors, dentists, and services in general would not be able to take on a new influx of residents.

Based on these, and other points, we strongly support the re-classification of this area (Site 1220A), and the other proposed Churwell sites, to colour code 'Red: Sites not considered suitable for allocation of housing'. Instead, we would ask the Planning Department to look at the areas within Leeds City Council that already have planning permission, and also, to revitalise housing currently standing empty, rather than look to build on Greenfield areas.

Representation ID: REP03693 Question Ref: H1

1282 - Laneside Farm Green to Red The school is already oversubscribed and some Churwell children cannot get places in Churwell School. There is only one GP sub-surgery for the whole of Churwell and already hundreds of houses have been built here in the last few years this has also impacted on the volume of traffic going to and from Leeds. The existing main road cannot cope with this high volume now.

Name: Keith Wahelin

Representor No: PRS01557

Representation ID: REP03700 Question Ref: H1

1282 - Laneside Farm Green to Red. Too much traffic, schools not big enough, wildlife & open space.

Name: J.k Maybury

Representor No: PRS01585

Representation ID: REP03736 Question Ref: H1

1282 Laneside Farm Green to Red. Serious traffic congestion at peak times. Need to preserve some green space at Churwell side of ring road habitat for wild life. Loss of vegetation adds to pollution.

Name: P Gaughan

Representor No: PRS01590

Representation ID: REP03738 Question Ref: H1

1282 Laneside Farm Green to Red. Heavy traffic already, no spare school places would need more health services.

Name: Jane Bellwood

Representor No: PRS01593

Representation ID: REP03745 Question Ref: H1

1282 Laneside Farm Green to Red. Heavy traffic on Churwell Hill especially at peak times. Doctors & Dentist & schools are at full capacity. These will be hardly any green areas left in the area for people to enjoy.

Representation ID: REP08302 Question Ref: H4

1282 / 2125 -

I wish to object to the above plans for the following reasons:-

Some of the sites are on green belt land such as 1282— Laneside Farm. I think it is important to preserve some green spaces locally as once they are built on, they will be lost forever!

The 1282 Laneside Farm and 2125 Manor House Farm sites in particular separate Churwell from Morley which helps Churwell retain its village character. The same can be said for all sites as they are all bordering Churwell.

Local Schools cannot cope with the number of children currently enrolling into them. My son started Churwell School in 2012 at which there were 85 applicants for only 60 places in the reception year. Some Churwell children were allocated places outside the area in Beeston, etc. Other Schools in Morley similarly had greater numbers of applications than places resulting in an extra class having to be run in Asquith School, Morley. The numbers of houses proposed for the area will obviously mean that there would be a huge increase in children in the area which will affect both primary and high schools. Local councillors/MPs are campaigning for Churwell children to be offered places at Churwell Schools and also Morley children to be offered a place at a Morley school where it has been requested.

Doctors and dentists are at capacity currently.

Such a massive development will have an impact on the roads. It is now 'the norm' for traffic to queue out of Churwell towards the ring road on a morning and for a slow crawl of traffic back up through Churwell in the evening rush hour. Not only would extra traffic inconvenience road users further, but I think pollution increases should be looked into too.

Finally, I am aware that these developments have been publicised and that there is a lot of local opposition to them. Please remember that the council is run to represent the community and allowing unsustainable levels of house building such as these is against the vast majority of the public's wishes. I would suggest visiting Churwell to conduct a survey to assess opinion of the public. Please side with the Leeds communities rather than the national house builders.

I sincerely trust you will give the above comments your consideration and look at this matter in a sensible way by transferring ALL OF THESE SITES TO RED.

Representation ID: REP08301 Question Ref: H1

1282 / 2125 -

I wish to object to the above plans for the following reasons:-

The above areas represent a green area that provides access to the Countryside in Urban Morley, Churwell New Village and Churwell.

Observation of bats, kingfisher, ducks and swifts. Much is made of supposed plentiful green sites but when we take away local green space, we can't get it back.

Proposed housing would require heavy vehicle traffic to gain access. Since New Village Way has a preponderance of town houses and flats, many cars are parked on both sides of the road, limiting access via this route. It is also relevant that children play on this and adjoining streets, making the addition of Heavy vehicle through traffic an increased hazard.

The overgrown fields which lead up to Pit Hill and the ground between the hill and the motorway have been grazed by tethered horses and ponies, since fixed by chain and tyres or stakes would indicate use by the travelling community.

The only other use for the land has been by local people walking dogs, sledging on the hill and children using the land for 'adventure'.

The areas house market has suffered greatly following the crash in the housing market in 2007. Persimmon sold property up to a value of 195000 and house prices have fallen to 151000 in the space of 6 years. Further house stock in this area would further devalue existing housing prices.

It was stated by Persimmon when specifically asked if any further construction was envisaged, which would detract from the current views and house prices, that no further construction was likely due to the presence of the existing farm and poor drainage of the land below it.

Poor drainage and the presence of a storm culvert through Churwell New Village would raise concerns about the risk of flooding due to an increase of housing in that area.

No one wants to see further development in their own area, myself included. I am surprised by the imbalance of the planned housing development which appears to be focussed on the South side of Leeds. Why is Morley so heavily placed in the current plan. As I understand over the last two decades there has been a heavy burden placed on South Leeds with a minor role for North Leeds. This current plan further adds to that burden. It is very important that a Balance is seen to be shown in Housing Planning in all areas of Leeds.

Sincerely trust you will give the above comments your consideration and look at this matter in a sensible way by transferring ALL OF THESE SITES TO RED.

Re: LDF SITES IN MORLEY

The Green areas:-

Site 1282 - Laneside Farm (suggested capacity 542 houses).

Site 2125 - Manor House Farm (Pit Hill & Allotments)(suggested capacity 77 houses).

I wish to object to the above plans for the following reasons:-

The above areas represent a green area that provides access to the Countryside in Urban Morley, Churwell New Village and Churwell.

Observation of bats, kingfisher, ducks and swifts. Much is made of supposed plentiful green sites but when we take away local green space, we can't get it back.

The 2011 Census showed that there were 12000 empty properties in Leeds. I understand from discussions with Local Councillors that there are 21000 existing Planning permissions for houses around Leeds. Should we not make use of the existing empty properties and agreed housing applications before resorting to green areas.

I understand that Builders would prefer to build houses in green areas as the profit for them is greater. However the need for affordable housing and family sized homes would be more valuable to the housing pool. The reduced profits of affordable housing is more fitting in times of austerity. The Leeds City Council is not there to maximise profits for building companies.

The plan shows groups of houses but fails to show the infrastructure required to facilitate this. More school places, more GPs, dentists, parking spaces, roads and jobs. No discussions have occurred between planners and the Highways Agency to determine impact and solution to the added traffic to the road network. Roads are already under strain from the existing traffic.

The Churwell New Village is constantly choked with cars parked on the roads. The plan had houses very closely packed with narrow garages that struggle to fit the average family car. Households don't just have one car and this adds to the existing congestion.

Proposed housing would require heavy vehicle traffic to gain access. Since New Village Way has a preponderance of town houses and flats, many cars are parked on both sides of the road, limiting access via this route. It is also relevant that children play on this and adjoining streets, making the addition of Heavy vehicle through traffic an increased hazard.

The overgrown fields which lead up to Pit Hill and the ground between the hill and the motorway have been grazed by tethered horses and ponies, since fixed by chain and tyres or stakes would indicate use by the travelling community.

The only other use for the land has been by local people walking dogs, sledging on the hill and children using the land for 'adventure'.

The areas house market has suffered greatly following the crash in the housing market in 2007. Persimmon sold property up to a value of 195000 and house prices have fallen to 151000 in the space of 6 years. Further house stock in this area would further devalue existing housing prices.

It was stated by Persimmon when specifically asked if any further construction was envisaged, which would detract from the current views and house prices, that no further construction was likely due to the presence of the existing farm and poor drainage of the land below it.

Poor drainage and the presence of a storm culvert through Churwell New Village would raise concerns about the risk of flooding due to an increase of housing in that area.

1282 / 1281B / 1220A -

I wish to make the following comments regarding :

Leeds LDF Volume2: 10 Outer South West

As with previous strategies a great deal of time and money appears to have gone into producing lengthy documents with plans for future developments. Little forethought, however, seems to have been given to ensuring that the infrastructure to cope with these developments is in place.

I refer specifically to the following residential sites —

Ref. 1282 Lane Side Farm PAS Morley (previously firmly rejected, but the decision reversed by Leeds City Council).

Ref. 1281B Bruntcliffe Road Morley

Ref. 1200A Land off Highfield Drive / Harthill Lane, Gildersome, LS27.

(There are many more. The proposed total target is excessive.)

Development of all these sites would cause massive overload on the area's infrastructure : neither highways, schools, medical and social care facilities could cope.

Development of this site would complete the merger of the communities of Morley and Churwell. It is an important green space between the two. Access onto Victoria Road (A643) either from King George Avenue or from some new site entrance is difficult if making the journey to Leeds. The local infrastructure cannot cope with such an addition.

Representor No: PRS02786

Representation ID: REP05330 Question Ref: H1

As residents of Churwell, we are writing with regard to the proposed housing development sites within our local community.

We all share the boundary of one of the sites in question, Site 1220A 'Land East of Churwell', and are particularly concerned over any possible proposal to build in this location.

We understand this is currently classified as 'Amber: Sites which have potential but issues / not as favoured as green sites'.

As clearly some of the issues have already been identified, we would like to re-iterate and clarify some of the issues that are of greatest concern to us as residents immediately neighbouring this location.

Churwell Hill / Elland Road is the main road from Morley towards Leeds, and as such suffers from a very high volume of traffic, particularly at commuting hours, when the traffic is at standstill to and from the Ring Road. This road does not have the ability to cope with greater volumes of traffic passing through the area, without creating greater risks to safety (cyclists, pedestrians, drivers) and increased congestion. This has already been identified as an issue as there are a number of speed cameras within a short space along this road.

This particular site, lies next to a busy train line, again posing dangers to locals, as it is not unusual for us to see people walking next to or crossing over the train line. This risk would only increase with additional housing in the area. Additionally, we understand the site has been identified as a historical land-fill area, again highlighting unsuitability.

Regarding the 6 sites identified in Churwell overall, the general infrastructure within the village is not of a scale that could accommodate such volumes of new houses, schools, doctors, dentists, and services in general would not be able to take on a new influx of residents.

Based on these, and other points, we strongly support the re-classification of this area (Site 1220A), and the other proposed Churwell sites, to colour code 'Red: Sites not considered suitable for allocation of housing'. Instead, we would ask the Planning Department to look at the areas within Leeds City Council that already have planning permission, and also, to revitalise housing currently standing empty, rather than look to build on Greenfield areas.

1282 - see comments above - a development of this size would have to include long term investment in schools and other infrastructure

Representation ID: REP01979 Question Ref: H2

1282 - I do not see how the existing infrastructure of Churwell can support a further 600ish houses on this site. The A643 is a busy road already and surely some alternative new access road (i.e. to the east of the proposed development) would be needed. Also this would put severe pressure on already oversubscribed schools in the area. Any development of that size would need to be treated almost as a new town, with new shops, pubs, park etc - rather than a bolt-on to what is already in the area.

I write to provide comments to inform the on-going consultation regarding the Draft Site Allocations Plan (DSAP) forming part of the range of documents forming the Leeds Development Framework. From the various documents available on line it is not clear if comments have to be provided through the online submission form or if any other form of communication is precluded so on this basis I have assumed the submission of comments by letter is acceptable and believe that if this is not the case I should be advised accordingly.

I have divided my letter into distinct sections for clarity, these are as follows:

- Site Specific Comments: Site Ref 1282 Plan 10.3 Housing — Outer South West — 542 houses
- Alternative Sites and Strategies
- Consultation Process
- Further Information Required

Site Specific Comments: Site Ref 1282 Plan 10.3 Housing — Outer South West — 542 houses

1. Access to site ref 1282 is from an existing access off the A643, this access is almost opposite

Westwoodside - The only access to a large area of existing housing and the access route to Churwell Primary School. Existing housing bounding the A643 precludes creation of another access until the far south west end of the site where it opens again onto the A643. Any access in this area could also then be almost opposite the 2nd interface between

Westwoodside and the A643. Given the significant number of houses proposed for this site, the subsequent number of vehicles (at least 750) and the high flows on the A643 I struggle to understand how such a junction could be formed without the introduction of signal control. This is eluded to in the site assessment but the scores do not appear to have been down-rated to reflect this significant issue

2. All traffic wishing to enter or leave the site will only have 2 options to leave the area. It will have to travel along the A643. At the North West end of the A643 at the roundabout with the A6110 traffic congestion is significant at both morning and evening peak with hazardous conditions generally prevailing on the roundabout. There are significant queues on the A6110 in the evening and on the approach from the A643 in the morning. To provide for such an increase in traffic significant remodelling of this junction would be required. To leave the area to the South West traffic would have to negotiate several already over capacity junctions with associated queuing to navigate around Morley. Again significant improvements would be required at several of the affected junctions. Furthermore all the additional traffic would only serve to worsen the current traffic safety situation through Churwell. The addition of traffic signals at a 4 way junction would require significant periods of at red time on the A643 and this again would have a significant impact on traffic flows

3. No account seems to have been taken of the capacity of the local primary or secondary schools to cater for the significant increase in demand that would arise from the addition of 542 houses to the area. Furthermore from reviewing the existing infrastructure arrangements at the local primary school it does not appear to readily lend itself to capacity enhancement. I am less familiar with the opportunities to enhance the capacity at the secondary schools in Morley but would suggest such a matter should be investigated and the outcomes communicated before consultation on this matter should close. I can only assume that the introduction of such a number of properties would also affect the boundary/catchment arrangements for primary and secondary schools meaning that more children will not be able to obtain places at their local school thus invoking a need for travel by public or private transport to another school further afield

4. No account seems to have been taken of the impact the proposed development would have on essential services such as Doctor's surgeries. The existing provision is already overstretched

5. The fact that the development of site 1282 will effectively completely link the conurbations of Morley and Churwell seems to have been completely ignored in the assessment. Had the land been previously designated 'green belt' perhaps these sections of the Site Assessments would have been completed and it would then have been obvious to the assessors that the development of this site is entirely inappropriate. A simple review of any aerial image of the area shows how this further unrestricted development would harm the area

6. No information has been provided to demonstrate that the existing statutory utility provisions in the main A643 service corridor that serves the area have been reviewed and found to have capacity for such a significant development

7. The fact that the provision of fire fighting services in the area is currently under review and should the current proposal prevail it will be unable to provide the same level of protection to existing properties without considering such a significant new development

8. It is not clear if the distance to the nearest train station, an obvious factor in the assessment, is by pedestrian route or straight line. Access to the train station in Morley is poor and its use low so this factor should not be overstated in any assessment

9. Public transport runs at capacity on the A643 at present and further bus services would be required to serve an increased population; this will then only serve to worsen the traffic situation on the road. This situation is exasperated by the steepness and length of gradient of the road through Churwell which only increases the hazard presented by large vehicles such as buses

10. The land is currently high grade agricultural land used for arable farming yielding crop every year, how can any strategy that take such land out of food production and replacing with housing when so many sites lie derelict be a justifiable or sustainable solution In assigning a green rating to this site none of the forgoing issues seem to have been considered in any detail, if at all. As such I find it impossible to understand how the site can be assigned a green rating. It is obvious to all that should it be assigned a green rating it is, subject to the economic conditions at the time, inevitable that developers will be attracted to the site as the granting of planning permission for such green sites will be a foregone conclusion. As such I wish to record my formal objection to the proposal.

Alternative Sites and Strategies

Brown field sites or those that at 1st assessment appear a little more difficult to develop appear to have been discounted in favour of sites such as Site 1282. Surely the Council has an obligation to ensure that the review and assessment process is weighted correctly in favour of the issues that matter to existing residents in areas and not the commercially driven agenda of developers who wish to minimise land and improvement costs and maximise profit with little or no concern for those they affect. From my review of the sites in the area that have been marked red or amber, in the majority of cases the only issues with the sites are those that could be resolved with investment by developers. I would suggest though that access scores used should be reviewed to ensure such issues are not over rated and as such used to distort score summaries. I note that some of the material issued asks that if people can identify land that is not included in the plan. While the sentiment is admirable I cannot imagine many residents have the time, resources of knowledge to identify many other sites. I would suggest though that all the issues affecting the decisions should be made holistically and, without contradicting the overall assessment of housing needs and taking this as fact, surely a review of larger areas suitable for development which includes all essentials services including schools and associated infrastructure requirements would ultimately yield a more appropriate result. There are several areas of the city that have been 'opened up' by relatively new highway schemes such as the construction of the East Leeds Link and it's connection to the M1 surely these could form part of an overall development strategy rather than trying to find enough small sites to meet the housing needs that each in turn has a significant detrimental impact on those in the existing areas and on services in the vicinity. As such I wish to record that I believe no agricultural land should be used to until all brownfield sites in adjacent areas have been developed. The additional cost of developing such sites should not be a reason to use agricultural land first.

Furthermore I believe that the strategy at present is too disjointed and does not represent a structured and sustainable plan for the city.

Consultation Process

I do not believe that you will have effectively consulted with all the residents in the area as we have had to rely on media coverage and the hard work of local community groups to provide information and direction to your web site. Many people will then find the information difficult to understand and will not understand the impact of the proposals on the local area and furthermore how decisions made now will affect the planning process in the future and as such development patterns for many years to come. I am of the opinion that every householder should have been provided with direct mail information and further public meetings and exhibitions should be arranged at suitable times when a cross section of the population can attend. These should be published in all suitable local community outlets including media options, schools, shops and surgeries. Many people were only aware of the single event in Morley when it was either too late to attend or indeed the date had passed. A single event also meant those unable to attend were left with no face to face contact options thereafter. I believe the number of attendee's should be identified and this given as a percentage of those affected to demonstrate the effectiveness, or otherwise of the event.

Further Information Required

I believe that the following information should be made available to the public to allow a fully informed consultation to be carried out and the consultation should not be closed until the information has been issued and adequate time allowed for those affected to review the information and respond:

1. Proposed impact on traffic flows on the A643 and the junctions which provide access to Churwell with details of the proposed mitigation measures that will be a condition of planning permission granted for any development in the area. Traffic model information should be available as should the results any early stage road safety audit reviews of improvement proposals
2. What road safety improvements would be made on the A643 through Churwell
3. Details of how any highway improvement works will be funded and a surety that they will be constructed before occupation of any new properties rather than years afterwards which is often the case
4. Proposals for schooling both of primary and secondary age children and how the proposed developments will impact upon catchment areas for existing housing areas
5. How essential services such as Doctor's surgeries, minor injury units, dentists and emergency service arrangements will be enhanced to allow for the increase in population in the area
6. Details of caveats and restrictions that would be imposed upon developers should planning permission be granted such as form of property and use restrictions
7. Details of how the scoring system has been devised and the process used to assign each score to each category.
8. Who has scored the sites and if the views of a full range of built environment professionals have been involved in the process, including Engineers, Architects and Planner.
9. Details of why some sites with the same score have different ratings
10. Why the development of brown field sites has not been given the priority it should have been in the proposals

Please refer to letter sent by email and post [Copied from original response]

I write to provide comments to inform the on-going consultation regarding the Draft Site Allocations Plan (DSAP) forming part of the range of documents forming the Leeds Development Framework.

From the various documents available on line it is not clear if comments have to be provided through the online submission form or if any other form of communication is precluded so on this basis I have assumed the submission of comments by letter is acceptable and believe that if this is not the case I should be advised accordingly.

I have divided my letter into distinct sections for clarity, these are as follows:

- Site Specific Comments: Site Ref 1282 Plan 10.3 Housing – Outer South West – 542 houses
- Alternative Sites and Strategies
- Consultation Process
- Further Information Required

Site Specific Comments: Site Ref 1282 Plan 10.3 Housing – Outer South West – 542 houses

- 1.Access to site ref 1282 is from an existing access off the A643, this access is almost opposite Westwoodside, the only access to a large area of existing housing and the access route to Churwell Primary School. Existing housing bounding the A643 precludes creation of another access until the far south west end of the site where it opens again onto the A643. Any access in this area could also then be almost opposite the 2nd interface between Westwoodside and the A643. Given the significant number of houses proposed for this site, the subsequent number of vehicles (at least 750) and the high flows on the A643 I struggle to understand how such a junction could be formed without the introduction of signal control. This is eluded to in the site assessment but the scores do not appear to have been down-rated to reflect this significant issue
- 2.All traffic wishing to enter or leave the site will only have 2 options to leave the area. It will have to travel along the A643. At the North West end of the A643 at the roundabout with the A6110 traffic congestion is significant at both morning and evening peak with hazardous conditions generally prevailing on the roundabout. There are significant queues on the A6110 in the evening and on the approach from the A643 in the morning. To provide for such an increase in traffic significant remodelling of this junction would be required. To leave the area to the South West traffic would have to negotiate several already over capacity junctions with associated queuing to navigate around Morley. Again significant improvements would be required at several of the affected junctions. Furthermore all the additional traffic would only serve to worsen the current traffic safety situation through Churwell. The addition of traffic signals at a 4 way junction would require significant periods of at red time on the A643 and this again would have a significant impact on traffic flows
- 3.No account seems to have been taken of the capacity of the local primary or secondary schools to cater for the significant increase in demand that would arise from the addition of 542 houses to the area. Representation ID: REP00671 Question Ref: H2

1282 Lane Side Farm Provides separation between Morley and Churwell. Planning has already been rejected for houses along the roadside in this area for a range of reasons so how can the site be suitable for the development of several hundred houses. Poor access due to high differences between the existing highway and this farm land. Would put too much strain on the existing road network which is already congested and is a key arterial route into and out of Leeds. The road cannot be expanded due to current developments. This development would set a precedent for further urban sprawl. Also represents a coalescence of the settlements several hundred houses. Poor access due to high differences between the existing highway and this farm land. Would put too much strain on the existing road network which is already congested and is a key arterial route into and out of Leeds. The road cannot be expanded due to current developments. This development would set a precedent for further urban sprawl. Also represents a coalescence of the settlements of Churwell and Morley which is to be avoided. Supporting infrastructure ie schools, doctors, dentists etc already at capacity how can hundreds of extra children be accommodated? You have no plans to increase the numbers of schools etc.

Representation ID: REP05839 Question Ref: H1

We wish to object and protest in the strongest possible terms to the proposals for building 1248 houses in Churwell.

The site numbers are 1282, 2125, 122A, 1099A, 1099B, 1996. Any research into the Churwell area will indicate how impractical these proposals are.

There is only one road in & out of Churwell which is already heavily congested during normal time and becomes completely gridlocked in the a.m. & p.m. rush hours it is also a major health & safety hazard as any observations will indicate.

Access to these proposed sites would add significantly to the already existing problems. There is already a shortage of places at schools in the area, additional population would necessitate commuting for children making even more traffic problems.

We would request that you take serious consideration of the items highlighted in this letter and permit the existing population to enjoy their amenity in safety and comfort.

Representation ID: REP06037 Question Ref: H1

1282 – Suggested change GREEN to RED

Reason for change - In Greenbelt there are few "green" areas left in Churwell prime arable land. . Need to retain a clear boundary between Churwell and Morley.

Other remarks – Infrastructure won't support vast building of houses, doctors, dentists and schools are filled to capacity. Concerns about access also, Elland Road/Victoria Road heavily congested, especially at peak periods

1282 – Suggested change GREEN to RED

Reason for change – There are insufficient places at the local schools at present where will the children go to school when Churwell children are been sent to Beeston /Middelton already? The doctors are full as are the dentists. There is a poor infrastructure which cannot support further development.

Name: Persimmon Homes

Representor No: PRS05691

Representation ID: REP06835 Question Ref: H1

We support the identification of site ref: 1282 as having the greatest potential to be allocated for housing. It is currently identified in the adopted Unitary Development Plan (UDP) as PAS (Protected Area of Search) Land and there are no physical or technical constraints restricting its delivery as a housing site.

Representation ID: REP06494 Question Ref: H1

Lane Side Farm, Morley (1282)

We support the identified of Lane Side Farm (Ref: 1282) as a "Green Site". It is identified in the adopted UDP as PAS Land and as such the principle of development has been accepted.

Persimmon Homes supports the principle of identifying this site as green and has the following comments which should be taken into account in the site assessment:

☐ The assessment refers to the presence of Listed Buildings but this is not the case. There are no Listed Buildings in the vicinity for the site and the assessment should be amended to reflect this.

☐ Site details:

- Distances: The Council should make it clear at what point and route has been used in identifying the distance to a rail station and bus stop.

- Green Belt: The assessment indicates that the site is partially within the Green Belt when it is not. The assessment should be amended to reflect this.

☐ SHLAA: Persimmon Homes has an interest in the site and is committed to bringing forward this site for development. Therefore, the site is available, suitable and achievable.

☐ Conformity with the Core Strategy: The site is well related to a major settlement and would be a major settlement extension.

The Council has scored this site 11 out of 15. However, it is unclear at this stage what methodology the Council has used in reaching this conclusion and we, therefore, reserve the right to comment in more detail until this information has been made available.

We recommend the Council:

☐ Clarifies how it has assessed the distance to the rail station and nearest bus stop.

☐ States that the site is available, suitable and achievable.

☐ Updates the assessment to remove references to Listed Buildings.

☐ States that the development of this site conforms with the aims and objectives of the emerging Core Strategy.

☐ Provide further information on what has been used to rank the site.

☐ Clarifies the Green Belt status of the site.

Therefore, Persimmon Homes recommends the Council should identify this site as a preferred option for housing, suitable for immediate delivery, at the next stage of the Site Allocation DPD process.

See rep for full details.

Representation ID: REP06494 Question Ref: H11

Site ref: 1282 is available immediately for development. Therefore we consider development can be achieved on the site in the short term i.e. within 5 years and leading into the medium to longer term.

Name: Michael Harrison

Representor No: PRS06042

Representation ID: REP06880 Question Ref: H4

Firstly I find it amazing our council can ever consider building more houses in Churwell when the facilities such as schools, doctors, are already over full capacity.

The traffic in Churwell is already at dangerous levels. The roads in and around Churwell are already over the capacity they can cope with.

Churwell is a village, let us keep it that way otherwise it will just become an extension of Leeds city centre.

I also feel there is no demand for more houses in Churwell. The fact LCC is even considering these sites tells me LCC is not considering the feelings of its residents and its repairs to roads, etc is already a great let down. Totally I am in disagreement with any of these sites for the above reasons.

1282 – Change suggested GREEN to RED

Reason – Greenfield Site

Other remarks – Usually 2 cars per house so 1000+ cars on Churwell Hill, plus pollution.

Name: Janice Curnyn

Representor No: PRS06209

Representation ID: REP06113 Question Ref: H1

1282 – Change suggested GREEN to RED

Reasons

1. Very heavy traffic congestion at peak hours that will worsen considerably

2. Major impact on already insufficient schools, doctors, dentists.

3. Loss of Green Site that is a Farm. Again this area is important in absorbing pollution as well as being a working farm. It is also important in being a site that gives Churwell one of its few village characteristics that remains.

Other remarks If Green areas are continually built on then you will end up with urban sprawl and areas such as Churwell and Morley lose the very thing that people want as an area to live. Namely attractive, with open green areas and individuality.

Representation ID: REP07983 Question Ref: H1

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Green and Amber Sites within the Core Public Transport Network

Table 4 below contains sites that are classified as 'Sites which have potential to be allocated for housing' and 'Sites which have potential but issues or not as favoured as green sites' that fall within 400m of the current core bus network.

The sites in this list are supported for housing growth.

Site specific mitigation would be required but it is unlikely that substantial bus service provision would be required at these sites (based on the current public transport network)

From a public transport perspective, we would encourage the prioritisation of these sites based on the proximity to the core public transport network and the bus service frequency levels.

[see table in full representation submitted which lists sites - green sites are linked to this comment]

Representor No: PRS07148

Representation ID: REP08304 Question Ref: H1

1282 / 2125 -

I wish to object to the above plans for the following reasons:-

Some of the sites are on green belt land such as 1282— Laneside Farm. I think it is important to preserve some green spaces locally as once they are built on, they will be lost forever!

The 1282 Laneside Farm and 2125 Manor House Farm sites in particular separate Churwell from Morley which helps Churwell retain its village character. The same can be said for all sites as they are all bordering Churwell.

Local Schools cannot cope with the number of children currently enrolling into them. My son started Churwell School in 2012 at which there were 85 applicants for only 60 places in the reception year. Some Churwell children were allocated places outside the area in Beeston, etc. Other Schools in Morley similarly had greater numbers of applications than places resulting in an extra class having to be run in Asquith School, Morley. The numbers of houses proposed for the area will obviously mean that there would be a huge increase in children in the area which will affect both primary and high schools. Local councillors/MPs are campaigning for Churwell children to be offered places at Churwell Schools and also Morley children to be offered a place at a Morley school where it has been requested.

Doctors and dentists are at capacity currently.

Such a massive development will have an impact on the roads. It is now 'the norm' for traffic to queue out of Churwell towards the ring road on a morning and for a slow crawl of traffic back up through Churwell in the evening rush hour. Not only would extra traffic inconvenience road users further, but I think pollution increases should be looked into too.

Finally, I am aware that these developments have been publicised and that there is a lot of local opposition to them. Please remember that the council is run to represent the community and allowing unsustainable levels of house building such as these is against the vast majority of the public's wishes. I would suggest visiting Churwell to conduct a survey to assess opinion of the public. Please side with the Leeds communities rather than the national house builders.

I sincerely trust you will give the above comments your consideration and look at this matter in a sensible way by transferring ALL OF THESE SITES TO RED.

Land side farm site ref 1283. Keep Red.
This land is unsuitable for development because of its position next to the railway and the total lack of road access. There are very few green spaces in this part of Morley North, and the land would be better used as public park land

Site Comments - Outer South West

Site reference: 1283

Housing

Lane Side Farm Extension, Morley

Name: Persimmon Homes

Representor No: PRS05691

Representation ID: REP06835 Question Ref: H7

We support the residential allocation of site ref: 1283.

See rep for full details.

Representation ID: REP07054 Question Ref: H7

Site 1283

Persimmon does not agree with the red assessment of the site.

We are unclear as to why site 1283 is considered red whilst 1282 is considered green (which Persimmon support). These sites are immediately adjacent to each other and would logically form part of a phased development. Site 1283 would come forward as a further phase following the development of Site 1282.

The basis of the Council's red rating is the sites location within the Green Belt and concerns about its isolation and access requirements. In reality, this site will come forward as a comprehensive masterplan with Site 1282 and will be a later phase once the requisite access infrastructure has been put in place.

Check the unrestricted sprawl of large built up areas.

The sprawl of Morley will be maintained by the railway line to the east. This is a defensible boundary and will, therefore, maintain separation between Morley and Middleton.

Prevent neighbouring towns from merging into one another.

The merging of Morley and Middleton will be prevented by the railway line to the east. This is a defensible boundary and will, therefore, maintain separation between Morley and Middleton.

Safeguarding the countryside from encroachment

Encroachment into the countryside will be restricted by the railway line.

Preserve the setting and special character of historic towns

Lane Side Farm (extension) does not contribute to the setting and special character of a historic town.

Assist urban regeneration

Releasing this site from the Green Belt for housing will contribute to a demonstrable need for housing in Morley that cannot be met by existing sites outside the Green Belt.

We recommend the Council:

- ☐ Clarifies how it has assessed the distance to the rail station and nearest bus stop.
- ☐ States that the site is available, suitable and achievable.
- ☐ Updates the assessment to remove references to Listed Buildings.
- ☐ States that the development of this site conforms with the Core Strategy and is major settlement extension, along with Site 1282.
- ☐ Provide further information on what has been used to rank the site.
- ☐ Clarifies the Green Belt status of the site.

Therefore, Persimmon Homes recommends the Council should identify this site as a preferred option for housing at the next stage of the Site Allocation DPD process.

1283

Overall

4.2 We are unclear as to why site 1283 is considered red whilst 1282 is considered green (which Persimmon support). These sites are immediately adjacent to each other and would logically form part of a phased development. Site 1283 would come forward as a further phase following the development of Site 1282. Because of the scale of housing required and the amount of land that should be released, 1283 is needed for housing growth. Please also note that the site does not fulfil the five purposes of Green Belt, which we consider in more detail below.

4.3 Persimmon Homes has an interest Lane Side Farm (extension) and is committed to bringing forward this site for development. Therefore the site is available, suitable and achievable. The site conforms with the Core Strategy as it is well related to a major settlement and would be a major settlement extension, contributing to an identified need for housing in Outer South West HMA and Morley.

Objection

4.4 Persimmon does not agree with the red assessment of the site.

4.5 The basis of the Council's red rating is the sites location within the Green Belt and concerns about its isolation and access requirements. In reality, this site will come forward as a comprehensive masterplan with Site 1282 and will be a later phase once the requisite access infrastructure has been put in place.

4.6 We do not consider that the site meets the five purposes of the Green Belt.

6 Conclusions

6.1 Overall whilst Persimmon Homes welcome the consultation of the Site Allocations Issues and Options DPD, they do have concerns with some of the Council's assumptions by way of how much growth is planned for. We refer to section 4 for more details. However, some of these points will no doubt be debated at the forthcoming examination of the Core Strategy which will have implications for the Site Allocations DPD.

6.2 Persimmon Homes disagrees that the Council has scored the site red and considers that housing is deliverable on the site, contributing to an identified need for housing in the Outer South West HMA and Morley. Our assessment of the site recommends that some amendments to the Council's assessment in order to clarify the site details and provide further information on what has been used to rank the site.

6.3 We would therefore be grateful if the Council takes these representations into consideration and keeps us informed on all stages of the Site Allocation process. See also representation submitted for full details

Representation ID: REP06494 Question Ref: H7

No. We consider site 1283 should be coded green, please see our submissions made above.

Representation ID: REP06494 Question Ref: H7

We consider site 1283 should be colour coded green.

Representation ID: REP06894 Question Ref: H11

We consider that site 1283 [unclear if they actually mean sites 1220B and 2164] are available immediately for development. Therefore we consider development can be achieved on the sites in the short term i.e. within 5 years and leading into the medium to longer term.

Representation ID: REP07054 Question Ref: H11

We consider that site 1283 are available immediately for development. Therefore we consider development can be achieved on the sites in the short term i.e. within 5 years and leading into the medium to longer term.

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Red Sites outside the Core Public Transport Network

Table 3 below contains sites that are classified as 'Sites not considered suitable for allocation for housing' and fall outside 400m of the current core bus network. Consideration needs to be given to if this site would be able to meet the LDF public transport accessibility requirements should housing be brought forward. We agree that these sites would not be suitable for housing development.

563 / 1284A / 1320 -

Leeds LDF Draft Housing Site Allocations.

I have studied the draft proposals for housing in the areas where we live and frequently use.

The proposals are considered to be excessive for such a small area and Morley seems to be taking a disproportionate amount of development. We have already had some poor planning in our area with over development and a lack of facilities such as open spaces and loss of footpaths.

There should therefore be no major development on our green belt. Instead any housing should be on brown field land or infill sites. These should be linked to improving our poor environment.

I attach a table and sketch map showing common sense counter proposals for this area. This shows that 397 houses could be built in our area linked to an improvement in our local facilities such as access to green spaces, cycleways and footpaths plus better links to our railway station which is due to be electrified.

Our area needs to be comprehensively planned to improve the area as a whole where everything links together rather than piecemeal planning.

I trust that these will be very carefully considered by the Council.

Yours faithfully,

[Table and map scanned]

My comments on individual sites:

Site no.	No.units	Object or support	Remarks
126	116	object	This site is an eyesore and should be cleared.
Housing should then be built on the site incorporating a high quality footpath and cycleway. The only way that we can resolve this problem area is through development.			
563	40	support	
1280		support	Station Road park. Although this is neglected it is a valuable open space and should not be built on
1282		object	Valuable green belt should remain untouched,
1284A	44	support	Fringe of built up area
1319	75	object	This has no public access to the site and is untidy and neglected. Houses should therefore be built on it which if done competently would vastly improve the site with improved access to the railway station and green spaces to the east. It is the old Morley Main colliery site and any development should include marker and also a memorial to all the miners who died in the Morley Main Colliery disaster.
1320		object	Valuable green open space
3428	22	support	
338/531	100		Daisy Hill with planning permission
Total 387

1079, 1072, 1077, 1143B, 1143D, 1171B, 1200A, 1258, 1284a, 1285, 1344, 2098a, 3365, 3456A.2098C, 2105, 2155, 3000, 3056.3064, 3078A, 4004, and 4029. As previously stated the amber sites that are greenbelt land should not be considered for development. Site 1032 is designated as a protected area of search this land has been retained along the edge of the existing settlement pending more suitable sites being found in the longer term this site should only be developed as a last resort.

Representation ID: REP01024 Question Ref: H2

1079, 1072, 1077, 1143B, 1143D, 1171B, 1200A, 1258, 1284a, 1285, 1344, 2098a, 3365, 3456A. All these sites are green belt sites , green belt land is there to stop urban sprawl and the destruction of the countryside that still remains in this area. If sites 1143B, 1143D, 1143F, 2155, 1274, 1032, and 2128 are built on East Ardsley West Ardsley and Tingley will just become one built up area hemmed in by the M62. Not all of these are greenbelt sites but if the development is allowed the basic principal of having greenbelt in this area will be completely wrecked!

Name: Persimmon Homes

Representor No: PRS05691

Representation ID: REP06784 Question Ref: H1

Site 1284A

Whilst Persimmon Homes is supportive of the identification of this site for allocation, they have the following comments which could be used to strengthen the case for its allocation, namely:

- Site Details
- Distances - The Council should make clear at what point / route it has used in identifying the distance to a rail station and bus stop.
- Listed Buildings – The site is bound by agricultural fields and residential development. We would therefore contend that there are no listed buildings effected by the development of this site for residential development.
- SHLAA – Persimmon Homes has an interest in this site and is committed to bringing forward this site for development. Therefore the site is available, suitable and achievable.
- Conformity with Core Strategy – The site is well related to a major settlement and would be a major settlement greenfield extension.

Green Belt Assessment

Check the unrestricted sprawl of large built up areas

In landscape character terms the site is already contained within two arms of built development that extend up to its western and southern boundaries. This development is suburban in nature comprising semi-detached and terraced dwellings with conventional front garden boundary details and associated vegetation, together with other properties.

Residential development on the site would not extend the built-up area of Morley in any meaningful way but could rather be interpreted as 'in-fill' of an existing urban area. The site does not therefore fulfil this purpose of Green Belt.

To assist in safeguarding the countryside from encroachment

Persimmon Homes objects that the grade of the site is 1.2 or 3a agricultural land value. We therefore request that the Council provides further information on how it has reached this conclusion.

Coalescence / Conclusion inconsistency

The overall coalescence conclusion states that there is no defensible boundary for the site. However, the conclusion summary states that 'the site has an existing defensible boundary'.

Our recommended changes

We would recommend that the Council:

- Clarifies how it has assessed the distance to the rail station and bus stop.
- References that no Listed Buildings would be affected as the result of developing this site for housing.
- States that the site is available, suitable and achievable.
- States that the development of this site confirms with the Core Strategy and is a major settlement greenfield extension.
- Amends the overall sprawl conclusion that there would be no potential for unrestricted sprawl.
- Provides further information on the agricultural land classification assumption.
- Amend the coalescence assessment, stating the site has a defensible boundary.
- Provides further information on what information it has used to rank the site.

See rep for full details

Representation ID: REP06784 Question Ref: H11

We consider that sites 1284A, 1284B and 1320 are available immediately for development. Therefore we consider development can be achieved on the sites in the short term i.e. within 5 years and leading into the medium to longer term.

Site Comments - Outer South West

Site reference: 1284B

Housing

Albert Drive - Low Moor Farm Extension, Morley

Name: Persimmon Homes

Representor No: PRS05691

Representation ID: REP06784 Question Ref: H7

Persimmon Homes consider that 1284B is a suitable location for residential development and believe that the following issues should be addressed by the Council in reassessing the site:

- Site Details
- Distances - The Council should make clear at what point / route it has used in identifying the distance to a rail station and bus stop.
- Listed Buildings – The site is bound by agricultural fields and residential development. We would therefore contend that there are no listed buildings effected by the development of this site for residential development.
- SHLAA – Persimmon Homes has an interest in this site and is committed to bringing forward this site for development. Therefore the site is available, suitable and achievable.
- Conformity with Core Strategy – The site is well related to a major settlement and would be a major settlement greenfield extension.

Green Belt Assessment

Check the unrestricted sprawl of large built up areas

In landscape character terms the site is already fully contained to the east by the existing woodland and would act as a natural second phase following the development of 1284A and / or 1320, located immediately to the west of this site. Therefore the existing woodland to the east would provide a natural boundary to the east and would round of the settlement of Morley in this location.

Therefore the development of this site would no lead to unrestricted sprawl and is a logical extension to Morley in this location.

Prevent neighbouring towns from merging

The nearest settlement to the east of Morley – lies around 2 kilometres to the west and the intervening land is rural in character - other than the A653 which passes roughly midway between the two settlements. Whilst the site itself is open and rural in character at the present time it is relatively selfcontained, in visual terms, bounded by mature hedges and trees to the east, and by the existing development to the west.

This, together with the landform and vegetation means that the two settlements are not visually connected. Consequently there is a clear and distinct separation between the settlements and the site does not therefore meet this purpose of the Green Belt land.

To assist in safeguarding the countryside from encroachment

With regard to safeguarding the countryside from encroachment, it is assessed that the retention of the existing planting along the eastern boundary of the site, together with new planting proposed as part of a landscape strategy, would provide an effective landscape boundary between this development and countryside to the east. Persimmon Homes objects that the grade of the site is 1,2 or 3a agricultural land value. We therefore request that the Council provides further information on how it has reached this conclusion.

This will be enhanced as the proposed planting matures so development on site could actively assist in safeguarding open countryside to the west. Consequently, this site does not meet this purpose of Green Belt land.

We would recommend that the Council:

- References that no Listed Buildings would be affected as the result of developing this site for housing.
- States that the site is available, suitable and achievable.
- States that the development of this site confirms with the Core Strategy and is a major settlement greenfield extension.
- Amends the overall sprawl conclusion that there would be no potential for unrestricted sprawl.
- Provides further information on the agricultural land classification assumption
- Amend the coalescence assessment, stating the site has a defensible boundary.
- Provides further information on what information it has used to rank the site.

Overall, taking into consideration the points above Persimmon Homes believes that this site meets the deliverability test of footnote 11 of the Framework, where it is considered to be suitable, available and achievable. Therefore, it is recommended that the Council amends the site to “green”.

Representation ID: REP02553 Question Ref: H1

1285 Owlers Farm - Green to Red

Traffic

The volume of traffic using Wide Lane is extremely high. The council has installed two central islands and speed bumps adjacent to the entrance/exit of the Topcliffe estate to provide some means for the pedestrians to cross this 'river of death', I was going to say 'safely', however that is not the case since no definite break in traffic is provided. Presumably traffic lights are too expensive?

When driving, trying to exit the Topcliffe estate and enter the traffic flow can be quite a time consuming exercise, especially turning right during peak traffic times.

This again is the current situation not post development!

Wide Lane meets Dewsbury Lane, again an inordinately busy dual carriageway. Since the opening of the White Rose Centre the volume of traffic along this highway has increased massively and at peak times along with weekend shopping traffic this road cannot cope with extra traffic volumes and additional housing development will again exacerbate this situation.

Infrastructure

Medical services in the Morley area are already overstretched. Dental practices have no vacancies for additional patients. I know of people who have to attend practices at the other side of Leeds because of the local situation.

Doctors surgeries are close to the same situation with waiting times for an appointment spiralling.

Public transport (which for the area under consideration means bus service) is suffering along with all other road users from the increased volume of traffic and the condition of the road surfaces in this and the surrounding areas.

Roads are literally crumbling under the massive volume of traffic and there seems no coordinated scheme in place to effect repairs.

If the LDF is put in place by Leeds City Council, Morley will be as large as Harrogate but whereas Harrogate has its own hospital and full time fire service, Morley has neither.

Schools

It has already been stated in the local media that Morley secondary schools will be at 'full capacity' by 2016 and that does not take into account any new housing development in the area. Newlands Primary School is being rebuilt and expanded but again, the additional 250 places will only accommodate children already in the system.

Parking

The official estimate that every house will have 0.6 cars is farcical, most cars on modern estates have 2 to 3 cars and parking these additional cars is becoming a severe problem resulting in congested streets within the estates.

The Topcliffe estate off wide lane is a perfect example of this problem and householders there have been warned by the fire service that in the event of a fire lives could be at risk because of cars parked on both sides of the streets limiting access for the fire engines.

Surely the planners must know that the horse goes 'in front of the cart' and realise that the infrastructure of the area should be put in place to give a workable system before additional population expansion to avoid catastrophic overcrowding and misplacements which will only serve to worsen our already cramped living standards.

Infrastructure not capable of supporting expansion.

Infrastructure

Medical services in the Morley area are already overstretched. Dental practices have no vacancies for additional patients. I know of people who have to attend practices at the other side of Leeds because of the local situation.

Doctors surgeries are close to the same situation with waiting times for an appointment spiralling.

Public transport (which for the area under consideration means bus service) is suffering along with all other road users from the increased volume of traffic and the condition of the road surfaces in this and the surrounding areas.

Roads are literally crumbling under the massive volume of traffic and there seems no coordinated scheme in place to effect repairs.

If the LDF is put in place by Leeds City Council, Morley will be as large as Harrogate but whereas Harrogate has its own hospital and full time fire service, Morley has neither.

Schools

It has already been stated in the local media that Morley secondary schools will be at 'full capacity' by 2016 and that does not take into account any new housing development in the area. Newlands Primary School is being rebuilt and expanded but again, the additional 250 places will only accommodate children already in the system.

Parking

The official estimate that every house will have 0.6 cars is farcical, most cars on modern estates have 2 to 3 cars and parking these additional cars is becoming a severe problem resulting in congested streets within the estates.

The Topcliffe estate off wide lane is a perfect example of this problem and householders there have been warned by the fire service that in the event of a fire lives could be at risk because of cars parked on both sides of the streets limiting access for the fire engines.

Surely the planners must know that the horse goes 'in front of the cart' and realise that the infrastructure of the area should be put in place to give a workable system before additional population expansion to avoid catastrophic overcrowding and misplacements which will only serve to worsen our already cramped living standards.

1285 Owlers Farm - Green to Red

Infrastructure not capable of supporting expansion

Traffic

The volume of traffic using Wide Lane is extremely high. The council has installed two central islands and speed bumps adjacent to the entrance/exit of the Topcliffe estate to provide some means for the pedestrians to cross this 'river of death', I was going to say 'safely', however that is not the case since no definite break in traffic is provided. Presumably traffic lights are too expensive?

When driving, trying to exit the Topcliffe estate and enter the traffic flow can be quite a time consuming exercise, especially turning right during peak traffic times.

This again is the current situation not post development!

Wide Lane meets Dewsbury Lane, again an inordinately busy dual carriageway. Since the opening of the White Rose Centre the volume of traffic along this highway has increased massively and at peak times along with weekend shopping traffic this road cannot cope with extra traffic volumes and additional housing development will again exacerbate this situation.

Infrastructure

Infrastructure not capable of supporting expansion

Traffic

The volume of traffic using Wide Lane is extremely high. The council has installed two central islands and speed bumps adjacent to the entrance/exit of the Topcliffe estate to provide some means for the pedestrians to cross this 'river of death', I was going to say 'safely', however that is not the case since no definite break in traffic is provided. Presumably traffic lights are too expensive?

When driving, trying to exit the Topcliffe estate and enter the traffic flow can be quite a time consuming exercise, especially turning right during peak traffic times.

This again is the current situation not post development!

Wide Lane meets Dewsbury Lane, again an inordinately busy dual carriageway. Since the opening of the White Rose Centre the volume of traffic along this highway has increased massively and at peak times along with weekend shopping traffic this road cannot cope with extra traffic volumes and additional housing development will again exacerbate this situation.

Infrastructure

Medical services in the Morley area are already overstretched. Dental practices have no vacancies for additional patients. I know of people who have to attend practices at the other side of Leeds because of the local situation.

Doctors surgeries are close to the same situation with waiting times for an appointment spiralling.

Public transport (which for the area under consideration means bus service) is suffering along with all other road users from the increased volume of traffic and the condition of the road surfaces in this and the surrounding areas.

Roads are literally crumbling under the massive volume of traffic and there seems no coordinated scheme in place to effect repairs.

If the LDF is put in place by Leeds City Council, Morley will be as large as Harrogate but whereas Harrogate has its own hospital and full time fire service, Morley has neither.

Schools

It has already been stated in the local media that Morley secondary schools will be at 'full capacity' by 2016 and that does not take into account any new housing development in the area. Newlands Primary School is being rebuilt and expanded but again, the additional 250 places will only accommodate children already in the system.

Parking

The official estimate that every house will have 0.6 cars is farcical, most cars on modern estates have 2 to 3 cars and parking these additional cars is becoming a severe problem resulting in congested streets within the estates.

The Topcliffe estate off wide lane is a perfect example of this problem and householders there have been warned by the fire service that in the event of a fire lives could be at risk because of cars parked on both sides of the streets limiting access for the fire engines.

Surely the planners must know that the horse goes 'in front of the cart' and realise that the infrastructure of the area should be put in place to give a workable system before additional population expansion to avoid catastrophic overcrowding and misplacements which will only serve to worsen our already cramped living standards.

If the LDF is put in place by Leeds City Council, Morley will be as large as Harrogate but whereas Harrogate has its own hospital and full time fire service, Morley has neither.

Schools

It has already been stated in the local media that Morley secondary schools will be at 'full capacity' by 2016 and that does not take into account any new housing development in the area. Newlands Primary School is being rebuilt and expanded but again, the additional 250 places will only accommodate children already in the system.

Parking

The official estimate that every house will have 0.6 cars is farcical, most cars on modern estates have 2 to 3 cars and parking these additional cars is becoming a severe problem resulting in congested streets within the estates.

The Topcliffe estate off wide lane is a perfect example of this problem and householders there have been warned by the fire service that in the event of a fire lives could be at risk because of cars parked on both sides of the streets limiting access for the fire engines.

Surely the planners must know that the horse goes 'in front of the cart' and realise that the infrastructure of the area should be put in place to give a workable system before additional population expansion to avoid catastrophic overcrowding and misplacements which will only serve to worsen our already cramped living standards.

Infrastructure not capable of supporting expansion

Traffic

The volume of traffic using Wide Lane is extremely high. The council has installed two central islands and speed bumps adjacent to the entrance/exit of the Topcliffe estate to provide some means for the pedestrians to cross this 'river of death', I was going to say 'safely', however that is not the case since no definite break in traffic is provided. Presumably traffic lights are too expensive?

When driving, trying to exit the Topcliffe estate and enter the traffic flow can be quite a time consuming exercise, especially turning right during peak traffic times.

This again is the current situation not post development!

Wide Lane meets Dewsbury Lane, again an inordinately busy dual carriageway. Since the opening of the White Rose Centre the volume of traffic along this highway has increased massively and at peak times along with weekend shopping traffic this road cannot cope with extra traffic volumes and additional housing development will again exacerbate this situation.

Infrastructure

Medical services in the Morley area are already overstretched. Dental practices have no vacancies for additional patients. I know of people who have to attend practices at the other side of Leeds because of the local situation.

Doctors surgeries are close to the same situation with waiting times for an appointment spiralling.

Public transport (which for the area under consideration means bus service) is suffering along with all other road users from the increased volume of traffic and the condition of the road surfaces in this and the surrounding areas.

Roads are literally crumbling under the massive volume of traffic and there seems no coordinated scheme in place to effect repairs.

If the LDF is put in place by Leeds City Council, Morley will be as large as Harrogate but whereas Harrogate has its own hospital and full time fire service, Morley has neither.

The volume of traffic using Wide Lane is extremely high. The council has installed two central islands and speed bumps adjacent to the entrance/exit of the Topcliffe estate to provide some means for the pedestrians to cross this 'river of death', I was going to say 'safely', however that is not the case since no definite break in traffic is provided. Presumably traffic lights are too expensive?

When driving, trying to exit the Topcliffe estate and enter the traffic flow can be quite a time consuming exercise, especially turning right during peak traffic times.

This again is the current situation not post development!

Wide Lane meets Dewsbury Lane, again an inordinately busy dual carriageway. Since the opening of the White Rose Centre the volume of traffic along this highway has increased massively and at peak times along with weekend shopping traffic this road cannot cope with extra traffic volumes and additional housing development will again exacerbate this situation.

Infrastructure

Medical services in the Morley area are already overstretched. Dental practices have no vacancies for additional patients. I know of people who have to attend practices at the other side of Leeds because of the local situation.

Doctors surgeries are close to the same situation with waiting times for an appointment spiralling.

Public transport (which for the area under consideration means bus service) is suffering along with all other road users from the increased volume of traffic and the condition of the road surfaces in this and the surrounding areas.

Roads are literally crumbling under the massive volume of traffic and there seems no coordinated scheme in place to effect repairs.

If the LDF is put in place by Leeds City Council, Morley will be as large as Harrogate but whereas Harrogate has its own hospital and full time fire service, Morley has neither.

Schools

It has already been stated in the local media that Morley secondary schools will be at 'full capacity' by 2016 and that does not take into account any new housing development in the area. Newlands Primary School is being rebuilt and expanded but again, the additional 250 places will only accommodate children already in the system.

Parking

The official estimate that every house will have 0.6 cars is farcical, most cars on modern estates have 2 to 3 cars and parking these additional cars is becoming a severe problem resulting in congested streets within the estates.

The Topcliffe estate off wide lane is a perfect example of this problem and householders there have been warned by the fire service that in the event of a fire lives could be at risk because of cars parked on both sides of the streets limiting access for the fire engines.

Surely the planners must know that the horse goes 'in front of the cart' and realise that the infrastructure of the area should be put in place to give a workable system before additional population expansion to avoid catastrophic overcrowding and misplacements which will only serve to worsen our already cramped living standards.

Newlands Primary School is being rebuilt and expanded but again, the additional 250 places will only accommodate children already in the system.

Parking

The official estimate that every house will have 0.6 cars is farcical, most cars on modern estates have 2 to 3 cars and parking these additional cars is becoming a severe problem resulting in congested streets within the estates.

The Topcliffe estate off wide lane is a perfect example of this problem and householders there have been warned by the fire service that in the event of a fire lives could be at risk because of cars parked on both sides of the streets limiting access for the fire engines.

Surely the planners must know that the horse goes 'in front of the cart' and realise that the infrastructure of the area should be put in place to give a workable system before additional population expansion to avoid catastrophic overcrowding and misplacements which will only serve to worsen our already cramped living standards.

1285 Owlers Farm - Green to Red

Infrastructure not capable of supporting expansion

Traffic

The volume of traffic using Wide Lane is extremely high. The council has installed two central islands and speed bumps adjacent to the entrance/exit of the Topcliffe estate to provide some means for the pedestrians to cross this 'river of death', I was going to say 'safely', however that is not the case since no definite break in traffic is provided. Presumably traffic lights are too expensive?

When driving, trying to exit the Topcliffe estate and enter the traffic flow can be quite a time consuming exercise, especially turning right during peak traffic times.

This again is the current situation not post development!

Wide Lane meets Dewsbury Lane, again an inordinately busy dual carriageway. Since the opening of the White Rose Centre the volume of traffic along this highway has increased massively and at peak times along with weekend shopping traffic this road cannot cope with extra traffic volumes and additional housing development will again exacerbate this situation.

Infrastructure

Medical services in the Morley area are already overstretched. Dental practices have no vacancies for additional patients. I know of people who have to attend practices at the other side of Leeds because of the local situation.

Doctors surgeries are close to the same situation with waiting times for an appointment spiralling.

Public transport (which for the area under consideration means bus service) is suffering along with all other road users from the increased volume of traffic and the condition of the road surfaces in this and the surrounding areas.

Roads are literally crumbling under the massive volume of traffic and there seems no coordinated scheme in place to effect repairs.

If the LDF is put in place by Leeds City Council, Morley will be as large as Harrogate but whereas Harrogate has its own hospital and full time fire service, Morley has neither.

Schools

It has already been stated in the local media that Morley secondary schools will be at 'full capacity' by 2016 and that does not take into account any new housing development in the area. Newlands Primary School is being rebuilt and expanded but again, the additional 250 places will only accommodate children already in the system.

Parking

The official estimate that every house will have 0.6 cars is farcical, most cars on modern estates have 2 to 3 cars and parking these additional cars is becoming a severe problem resulting in congested streets within the estates.

This again is the current situation not post development!

Wide Lane meets Dewsbury Lane, again an inordinately busy dual carriageway. Since the opening of the White Rose Centre the volume of traffic along this highway has increased massively and at peak times along with weekend shopping traffic this road cannot cope with extra traffic volumes and additional housing development will again exacerbate this situation.

Infrastructure

Medical services in the Morley area are already overstretched. Dental practices have no vacancies for additional patients. I know of people who have to attend practices at the other side of Leeds because of the local situation.

Doctors surgeries are close to the same situation with waiting times for an appointment spiralling.

Public transport (which for the area under consideration means bus service) is suffering along with all other road users from the increased volume of traffic and the condition of the road surfaces in this and the surrounding areas.

Roads are literally crumbling under the massive volume of traffic and there seems no coordinated scheme in place to effect repairs.

If the LDF is put in place by Leeds City Council, Morley will be as large as Harrogate but whereas Harrogate has its own hospital and full time fire service, Morley has neither.

Schools

It has already been stated in the local media that Morley secondary schools will be at 'full capacity' by 2016 and that does not take into account any new housing development in the area. Newlands Primary School is being rebuilt and expanded but again, the additional 250 places will only accommodate children already in the system.

Parking

The official estimate that every house will have 0.6 cars is farcical, most cars on modern estates have 2 to 3 cars and parking these additional cars is becoming a severe problem resulting in congested streets within the estates.

The Topcliffe estate off wide lane is a perfect example of this problem and householders there have been warned by the fire service that in the event of a fire lives could be at risk because of cars parked on both sides of the streets limiting access for the fire engines.

Surely the planners must know that the horse goes 'in front of the cart' and realise that the infrastructure of the area should be put in place to give a workable system before additional population expansion to avoid catastrophic overcrowding and misplacements which will only serve to worsen our already cramped living standards.

Infrastructure not capable of supporting expansion

Traffic

The volume of traffic using Wide Lane is extremely high. The council has installed two central islands and speed bumps adjacent to the entrance/exit of the Topcliffe estate to provide some means for the pedestrians to cross this 'river of death', I was going to say 'safely', however that is not the case since no definite break in traffic is provided. Presumably traffic lights are too expensive?

When driving, trying to exit the Topcliffe estate and enter the traffic flow can be quite a time consuming exercise, especially turning right during peak traffic times.

This again is the current situation not post development!

The official estimate that every house will have 0.6 cars is farcical, most cars on modern estates have 2 to 3 cars and parking these additional cars is becoming a severe problem resulting in congested streets within the estates.

The Topcliffe estate off wide lane is a perfect example of this problem and householders there have been warned by the fire service that in the event of a fire lives could be at risk because of cars parked on both sides of the streets limiting access for the fire engines.

Surely the planners must know that the horse goes 'in front of the cart' and realise that the infrastructure of the area should be put in place to give a workable system before additional population expansion to avoid catastrophic overcrowding and misplacements which will only serve to worsen our already cramped living standards.

1285 Owlers Farm - Green to Red

Infrastructure not capable of supporting expansion

Traffic

The volume of traffic using Wide Lane is extremely high. The council has installed two central islands and speed bumps adjacent to the entrance/exit of the Topcliffe estate to provide some means for the pedestrians to cross this 'river of death', I was going to say 'safely', however that is not the case since no definite break in traffic is provided. Presumably traffic lights are too expensive?

When driving, trying to exit the Topcliffe estate and enter the traffic flow can be quite a time consuming exercise, especially turning right during peak traffic times.

This again is the current situation not post development!

Wide Lane meets Dewsbury Lane, again an inordinately busy dual carriageway. Since the opening of the White Rose Centre the volume of traffic along this highway has increased massively and at peak times along with weekend shopping traffic this road cannot cope with extra traffic volumes and additional housing development will again exacerbate this situation.

Infrastructure

Medical services in the Morley area are already overstretched. Dental practices have no vacancies for additional patients. I know of people who have to attend practices at the other side of Leeds because of the local situation.

Doctors surgeries are close to the same situation with waiting times for an appointment spiralling.

Public transport (which for the area under consideration means bus service) is suffering along with all other road users from the increased volume of traffic and the condition of the road surfaces in this and the surrounding areas.

Roads are literally crumbling under the massive volume of traffic and there seems no coordinated scheme in place to effect repairs.

If the LDF is put in place by Leeds City Council, Morley will be as large as Harrogate but whereas Harrogate has its own hospital and full time fire service, Morley has neither.

Schools

It has already been stated in the local media that Morley secondary schools will be at 'full capacity' by 2016 and that does not take into account any new housing development in the area. Newlands Primary School is being rebuilt and expanded but again, the additional 250 places will only accommodate children already in the system.

Parking

The official estimate that every house will have 0.6 cars is farcical, most cars on modern estates have 2 to 3 cars and parking these additional cars is becoming a severe problem resulting in congested streets within the estates.

The Topcliffe estate off wide lane is a perfect example of this problem and householders there have been warned by the fire service that in the event of a fire lives could be at risk because of cars parked on both sides of the streets limiting access for the fire engines.

Infrastructure

Medical services in the Morley area are already overstretched. Dental practices have no vacancies for additional patients. I know of people who have to attend practices at the other side of Leeds because of the local situation.

Doctors surgeries are close to the same situation with waiting times for an appointment spiralling.

Public transport (which for the area under consideration means bus service) is suffering along with all other road users from the increased volume of traffic and the condition of the road surfaces in this and the surrounding areas.

Roads are literally crumbling under the massive volume of traffic and there seems no coordinated scheme in place to effect repairs.

If the LDF is put in place by Leeds City Council, Morley will be as large as Harrogate but whereas Harrogate has its own hospital and full time fire service, Morley has neither.

Schools

It has already been stated in the local media that Morley secondary schools will be at 'full capacity' by 2016 and that does not take into account any new housing development in the area. Newlands Primary School is being rebuilt and expanded but again, the additional 250 places will only accommodate children already in the system.

Parking

The official estimate that every house will have 0.6 cars is farcical, most cars on modern estates have 2 to 3 cars and parking these additional cars is becoming a severe problem resulting in congested streets within the estates.

The Topcliffe estate off wide lane is a perfect example of this problem and householders there have been warned by the fire service that in the event of a fire lives could be at risk because of cars parked on both sides of the streets limiting access for the fire engines.

Surely the planners must know that the horse goes 'in front of the cart' and realise that the infrastructure of the area should be put in place to give a workable system before additional population expansion to avoid catastrophic overcrowding and misplacements which will only serve to worsen our already cramped living standards.

Infrastructure not capable of supporting expansion

Traffic

The volume of traffic using Wide Lane is extremely high. The council has installed two central islands and speed bumps adjacent to the entrance/exit of the Topcliffe estate to provide some means for the pedestrians to cross this 'river of death', I was going to say 'safely', however that is not the case since no definite break in traffic is provided. Presumably traffic lights are too expensive?

When driving, trying to exit the Topcliffe estate and enter the traffic flow can be quite a time consuming exercise, especially turning right during peak traffic times.

This again is the current situation not post development!

Wide Lane meets Dewsbury Lane, again an inordinately busy dual carriageway. Since the opening of the White Rose Centre the volume of traffic along this highway has increased massively and at peak times along with weekend shopping traffic this road cannot cope with extra traffic volumes and additional housing development will again exacerbate this situation.

Infrastructure

Medical services in the Morley area are already overstretched. Dental practices have no vacancies for additional patients. I know of people who have to attend practices at the other side of Leeds because of the local situation.

Doctors surgeries are close to the same situation with waiting times for an appointment spiralling.

Infrastructure not capable of supporting expansion

Traffic

The volume of traffic using Wide Lane is extremely high. The council has installed two central islands and speed bumps adjacent to the entrance/exit of the Topcliffe estate to provide some means for the pedestrians to cross this 'river of death', I was going to say 'safely', however that is not the case since no definite break in traffic is provided. Presumably traffic lights are too expensive?

When driving, trying to exit the Topcliffe estate and enter the traffic flow can be quite a time consuming exercise, especially turning right during peak traffic times.

This again is the current situation not post development!

Wide Lane meets Dewsbury Lane, again an inordinately busy dual carriageway. Since the opening of the White Rose Centre the volume of traffic along this highway has increased massively and at peak times along with weekend shopping traffic this road cannot cope with extra traffic volumes and additional housing development will again exacerbate this situation.

Infrastructure

Medical services in the Morley area are already overstretched. Dental practices have no vacancies for additional patients. I know of people who have to attend practices at the other side of Leeds because of the local situation.

Doctors surgeries are close to the same situation with waiting times for an appointment spiralling.

Public transport (which for the area under consideration means bus service) is suffering along with all other road users from the increased volume of traffic and the condition of the road surfaces in this and the surrounding areas.

Roads are literally crumbling under the massive volume of traffic and there seems no coordinated scheme in place to effect repairs.

If the LDF is put in place by Leeds City Council, Morley will be as large as Harrogate but whereas Harrogate has its own hospital and full time fire service, Morley has neither.

Schools

It has already been stated in the local media that Morley secondary schools will be at 'full capacity' by 2016 and that does not take into account any new housing development in the area. Newlands Primary School is being rebuilt and expanded but again, the additional 250 places will only accommodate children already in the system.

Parking

The official estimate that every house will have 0.6 cars is farcical, most cars on modern estates have 2 to 3 cars and parking these additional cars is becoming a severe problem resulting in congested streets within the estates.

The Topcliffe estate off wide lane is a perfect example of this problem and householders there have been warned by the fire service that in the event of a fire lives could be at risk because of cars parked on both sides of the streets limiting access for the fire engines.

Surely the planners must know that the horse goes 'in front of the cart' and realise that the infrastructure of the area should be put in place to give a workable system before additional population expansion to avoid catastrophic overcrowding and misplacements which will only serve to worsen our already cramped living standards.

1285 Owlers Farm, Site Capacity 100, Ward Morley South

This site is accessed from Wide Lane, a road which does not live up to its name and is extremely congested at peak times. Road links to Morley are slow and to Leeds involve using the A653 which is busy especially at peak times; the use of a merge lane at the roundabout junction of Wide Lane and Dewsbury Road exacerbates the difficulties. The local infrastructure cannot cope with such an addition. This site acts as a green break between Morley and Middleton.

1285 -

Once again ill thought out and totally unsuitable developers ignore the local people who pay Council Tax. This development will put extra traffic on to the A653 which is bad at present taking into account the extension to the White Rose centre it's madness. No schools with places no health centres near by it means using cars which create traffic or can you not see that problem.

1285 Owlers Farm, Site Capacity 100, Ward Morley South

This site is accessed from Wide Lane, a road which does not live up to its name and is extremely congested at peak times. Road links to Morley are slow and to Leeds involve using the A653 which is busy especially at peak times; the use of a merge lane at the roundabout junction of Wide Lane and Dewsbury Road exacerbates the difficulties. The local infrastructure cannot cope with such an addition. This site acts as a green break between Morley and Middleton.

Representor No: PRS03170

Representation ID: REP01024 Question Ref: H5

1079, 1072, 1077, 1143B, 1143D, 1171B, 1200A, 1258, 1284a, 1285, 1344, 2098a, 3365, 3456A.2098C, 2105, 2155, 3000, 3056,3064, 3078A, 4004, and 4029. As previously stated the amber sites that are greenbelt land should not be considered for development. Site 1032 is designated as a protected area of search this land has been retained along the edge of the existing settlement pending more suitable sites being found in the longer term this site should only be developed as a last resort.

Representation ID: REP01024 Question Ref: H2

1079, 1072, 1077, 1143B, 1143D, 1171B, 1200A, 1258, 1284a, 1285, 1344, 2098a, 3365, 3456A. All these sites are green belt sites , green belt land is there to stop urban sprawl and the destruction of the countryside that still remains in this area. If sites 1143B, 1143D, 1143F,2155, 1274, 1032, and 2128 are built on East Ardsley West Ardsley and Tingley will just become one built up area hemmed in by the M62. Not all of these are greenbelt sites but if the development is allowed the basic principal of having greenbelt in this area will be completely wrecked!

Name: Persimmon Homes

Representor No: PRS05691

Representation ID: REP06938 Question Ref: H1

Site 1285

We support the identification of site 1285 as a "Green Site".

We support the identification of the site as light green in terms of the assessment. The site meets the relevant Framework tests as set out at footnote 11 in that the site is suitable and available thereby making development on the site achievable. A planning application is currently being considered for the site and this shows the intrinsic interest of the site.

We support the site assessment which concludes that the site is free from constraint. In particular the site is well related to the settlement of Morley and therefore broadly accords with the emerging Core Strategy.

We would recommend that the Council:

- ☐ Clarifies how it has assessed the distance to the rail station and bus stop.
- ☐ States that the site is available, suitable and achievable.
- ☐ States that the development of this site conforms with the Core Strategy and is a major settlement greenfield extension.
- ☐ Provides further information on the agricultural land classification assumption.
- ☐ Provides further information on what information it has used to rank the site.

See rep for full details.

Representation ID: REP06938 Question Ref: H11

Site 1285 is available immediately for development. We consider that development can be achieved on the sites in the short term i.e. within 5 years and leading into the medium to longer term.

Name: Michael Long

Representor No: PRS06750

Representation ID: REP07983 Question Ref: H1

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Green and Amber Sites within the Core Public Transport Network

Table 4 below contains sites that are classified as 'Sites which have potential to be allocated for housing' and 'Sites which have potential but issues or not as favoured as green sites' that fall within 400m of the current core bus network.

The sites in this list are supported for housing growth.

Site specific mitigation would be required but it is unlikely that substantial bus service provision would be required at these sites (based on the current public transport network)

From a public transport perspective, we would encourage the prioritisation of these sites based on the proximity to the core public transport network and the bus service frequency levels.

[see table in full representation submitted which lists sites - green sites are linked to this comment]

563 / 1284A / 1320 -

Leeds LDF Draft Housing Site Allocations.

I have studied the draft proposals for housing in the areas where we live and frequently use.

The proposals are considered to be excessive for such a small area and Morley seems to be taking a disproportionate amount of development. We have already had some poor planning in our area with over development and a lack of facilities such as open spaces and loss of footpaths.

There should therefore be no major development on our green belt. Instead any housing should be on brown field land or infill sites. These should be linked to improving our poor environment.

I attach a table and sketch map showing common sense counter proposals for this area. This shows that 397 houses could be built in our area linked to an improvement in our local facilities such as access to green spaces, cycleways and footpaths plus better links to our railway station which is due to be electrified.

Our area needs to be comprehensively planned to improve the area as a whole where everything links together rather than piecemeal planning.

I trust that these will be very carefully considered by the Council.

Yours faithfully,

[Table and map scanned]

My comments on individual sites:

Site no.	No.units	Object or support	Remarks
126	116	object	This site is an eyesore and should be cleared.
Housing should then be built on the site incorporating a high quality footpath and cycleway. The only way that we can resolve this problem area is through development.			
563	40	support	
1280		support	Station Road park. Although this is neglected it is a valuable open space and should not be built on
1282		object	Valuable green belt should remain untouched,
1284A	44	support	Fringe of built up area
1319	75	object	This has no public access to the site and is untidy and neglected. Houses should therefore be built on it which if done competently would vastly improve the site with improved access to the railway station and green spaces to the east. It is the old Morley Main colliery site and any development should include marker and also a memorial to all the miners who died in the Morley Main Colliery disaster.
1320		object	Valuable green open space
3428	22	support	
338/531	100		Daisy Hill with planning permission
Total 387

1319 - objection to amber. Should be green.

2.4 In the 'Outer South West Housing Market Characteristic Area', we consider that 'Land to the North of Albert Road, Morley' (Site Ref 1318) should be identified as 'Green' because it is one of the most suitable sites for allocation for housing.

2.5 Our client is proposing to provide a residential scheme consisting of approximately 70 dwellings. This would consist of a mix of dwelling types and tenures with an emphasis on family housing. The housing mix would reflect the Council's Strategic Housing Market Assessment (2011). The proposal would also provide an element of affordable housing.

2.6 The site is 2.5 hectares in size and is located on the eastern side of Morley. The site has frontage directly onto Albert Road. The site currently consists of low quality grassland, which is split into a number of individual paddocks. The site was formerly used for mining and was subsequently backfilled as part of the remediation of the land. Therefore, the SHLAA correctly identifies the site as previously developed.

2.7 The surrounding area comprises of a mixture of residential and commercial developments. However, the area is predominately residential in character. The site is bordered by residential development to the east and south, to the west by an industrial estate, and to the north by a strip of woodland. An industrial depot is situated beyond the woodland to the north.

2.8 As shown, the site is bounded on three sides by built development. The site is clearly well related to the existing pattern of development and would represent the efficient use of previously developed land. The development of the site would not extend the built form and would represent an appropriate infill development within the urban area.

2.9 Albert Road and the neighbouring highway network have sufficient capacity to accommodate the proposed development without harming highway safety and efficiency. It is noted that the Council has no objections to the proposal in this regard. Equally, an Intrusive Site Investigation has been carried out which concluded that there was minimal contamination of the site. Therefore, there are no insurmountable obstacles to the development of the site and it is fully deliverable in accordance with paragraph 47 of the NPPF. Equally, having reviewed the other green and amber rated sites in the 'Outer South West', it is considered that Site 1319 represents one of the most appropriate sites for allocation when considered reasonable alternatives.

2.10 We are conscious of the considerations set out in Policy SP6 in the Core Strategy (CS) as outlined in the introductory Chapter to these representations. Dealing with those provisions in turn,

i. Whether the proposal is a Sustainable location, which is supported by existing or access to new facilities and services.

2.11 Site 1319 is located within Morley, which is identified as a 'major settlement' in the settlement hierarchy, and therefore is intrinsically a sustainable location for development.

The site is within reasonable walking distance to bus and rail services and is accessible to employment opportunities, retail and recreation facilities including Morley town centre, primary and secondary schools, and local shops. Therefore, it is considered that the site is

in a highly sustainable and accessible location in accordance with draft Policy T2 in the emerging Core Strategy.

ii. Preference for brownfield and regeneration sites.

2.12 The Council's assessment identifies that the site constitutes previously developed land. Therefore the site should be a high priority for allocation in accordance with paragraph 17 of the NPPF, which seeks to encourage the effective use of previously developed land.

iii. The least impact on Green Belt purposes

2.13 The site is not located in the Green Belt.

iv. Opportunities to reinforce or enhance the distinctiveness of existing neighbourhoods and quality of life of local communities through the design and standard of new homes.

2.14 We consider that the site is suitable for a development of high quality family housing. This would help to meet a local need for family housing and diversify the local housing stock.

The scheme would incorporate a landscape buffer along its western boundary to hide the neighbouring industrial estate. It should also be noted that our client has commissioned a Noise Assessment, which determined that the noise levels from the neighbouring industrial estate and depot would not unduly compromise the residential amenity of any future occupiers of the site.

v) The need for realistic lead in times and build out rates for housing construction

2.15 The site is available. It is wholly within the ownership of our client who is committed to bringing the site forward for housing development. It is considered that there would be a minimal lead in time and the development could be built out within a 3 - 4 year period.

vi) The least negative and most positive impacts on green infrastructure, green corridors, greenspace and nature conservation.

2.16 It is recognised that the site is designated as Green Space in the UDP. However the site is privately owned and there are no public rights of way across the land. The site is used as paddocks and does not have any public amenity or recreational value. The site is heavily grazed and therefore has little or no biodiversity value.

Site Comments - Outer South West

Site reference: 1319

Housing

Albert Road (land north of), Morley

Name: Kcs Developments Limited KCS Developments Limited

Representor No: PRS06124

2.17 The only issue is the visual contribution the site makes to the quality of the townscape. It is recognised that the construction of new homes on the site would change the character of the site from being open to one with built development. However, the site is not of any special landscape merit and makes little contribution to the character of the surrounding area. The extent of any impact would be limited by the proposed layout and landscaping. The proposed landscaping on the road frontage would significantly soften the impact of the development on the wider views.

2.18 The Open Space Audit has identified Site 1319 as unsuitable for continued designation as a Greenspace and therefore it is proposed to delete the allocation. Furthermore, the Council's own assessment identifies that there is a surplus of natural greenspace within north Morley. Consequently, we consider that there is no justification for not identifying Site 1319 as 'GREEN' in the Site Appraisal because the greenspace designation is clearly no longer relevant or appropriate.

vii) Generally avoiding or mitigating areas of flood risk

2.19 The site is not within a flood risk zone, and site run-off will be mitigated through a SUDS drainage scheme.

2.20 In accordance with Paragraph 47 of the NPPF, Site 1319 is fully deliverable as it is available now, offers a suitable location for development now, and is achievable with a realistic prospect that housing will be delivered on the site within five years and the development is entirely viable. There are no flood risk or contamination issues on the site. The proposal would deliver significant public benefits particularly in regards to delivering affordable housing. Based on the above, we consider that the site is available, suitable and achievable should therefore should be categorised as 'GREEN'.

Representation ID: REP06996 Question Ref: H4

1319 - objection to amber. Should be green.

For the reasons set out above, we consider that Site 1319 should be identified as 'Green' because it has the greatest potential for allocation for housing.

Representation ID: REP06996 Question Ref: H11

1319

We do not consider that housing sites should be phased over particular periods of the Core Strategy, as this is a matter for the market to determine. However as demonstrated Site 1319 is fully deliverable and therefore could come forward in the first five years of the Local Plan period.

Representation ID: REP07006 Question Ref: G1

Housing site 1319 - greenspace should be deleted

We consider that the UDP N1 greenspace designation on Site 1319 should be deleted. Site 1319 fulfils no greenspace function, which is recognised in the Council's Open Space Audit. The site is privately owned and there are no public rights of way across the land and therefore it does not have any public amenity or recreational value. Furthermore, the Open Space Audit identifies that there is a surplus of Natural Green Space within Morley and as such, the retention of the site as Greenspace is unnecessary

Representation ID: REP07006 Question Ref: G14

Site 1319 'Land north of Albert Road, Morley' should be released for housing. The Open Space Audit has identified that the site fulfils no greenspace function and should no longer be retained for this purpose. As previously stated, the site comprises of low quality grassland, which has no intrinsic landscape value and makes a limited visual contribution to the settlement.

2.38 Furthermore, the site is in private ownership and therefore there is no prospect of the land being brought into beneficial use as greenspace in the future. Instead, the site should be released for housing given that it is located in a highly sustainable location.

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Amber Sites outside the Core Public Transport Network

Table 2 below contains sites that are classified as 'Sites which have potential but issues or not as favoured as green sites' but fall outside 400m of the current core bus network. Consideration needs to be given to if this site would be able to meet the LDF public transport accessibility requirements should housing be brought forward. We are be minded to recommend that these site were not prioritised for housing until other more accessible site have been considered. Sites which fall marginally outside the 400m catchments and have high bus frequencies or are small low capacity sites are less of concern but are flagged up nonetheless.

563 / 1284A / 1320 -

Leeds LDF Draft Housing Site Allocations.

I have studied the draft proposals for housing in the areas where we live and frequently use.

The proposals are considered to be excessive for such a small area and Morley seems to be taking a disproportionate amount of development. We have already had some poor planning in our area with over development and a lack of facilities such as open spaces and loss of footpaths.

There should therefore be no major development on our green belt. Instead any housing should be on brown field land or infill sites. These should be linked to improving our poor environment.

I attach a table and sketch map showing common sense counter proposals for this area. This shows that 397 houses could be built in our area linked to an improvement in our local facilities such as access to green spaces, cycleways and footpaths plus better links to our railway station which is due to be electrified.

Our area needs to be comprehensively planned to improve the area as a whole where everything links together rather than piecemeal planning.

I trust that these will be very carefully considered by the Council.

Yours faithfully,

[Table and map scanned]

My comments on individual sites:

Site no.	No.units	Object or support	Remarks
126	116	object	This site is an eyesore and should be cleared.
Housing should then be built on the site incorporating a high quality footpath and cycleway. The only way that we can resolve this problem area is through development.			
563	40	support	
1280		support	Station Road park. Although this is neglected it is a valuable open space and should not be built on
1282		object	Valuable green belt should remain untouched,
1284A	44	support	Fringe of built up area
1319	75	object	This has no public access to the site and is untidy and neglected. Houses should therefore be built on it which if done competently would vastly improve the site with improved access to the railway station and green spaces to the east. It is the old Morley Main colliery site and any development should include marker and also a memorial to all the miners who died in the Morley Main Colliery disaster.
1320		object	Valuable green open space
3428	22	support	
338/531	100		Daisy Hill with planning permission
Total 387			

Name: Persimmon Homes

Representor No: PRS05691

Representation ID: REP06784 Question Ref: H1

Whilst Persimmon Homes are supportive of the identification of 1320 for allocation, the following points need to be addressed by the Council:

- Site Details
- Distances - The Council should make clear at what point / route it has used in identifying the distance to a rail station and bus stop.
- Conformity with Core Strategy – The site is well related to a major settlement and would be a major settlement greenfield extension.

Persimmon Homes objects that the grade of the site is 1.2 or 3a agricultural land value. We therefore request that the Council provides further information on how it has reached this conclusion.

We would recommend that the Council:

- States that the development of this site confirms with the Core Strategy and is a major settlement greenfield extension.
- Provides further information on the agricultural land classification assumption
- Provides further information on what information it has used to rank the site.

See rep for full details.

Representation ID: REP06784 Question Ref: H11

We consider that sites 1284A, 1284B and 1320 are available immediately for development. Therefore we consider development can be achieved on the sites in the short term i.e. within 5 years and leading into the medium to longer term.

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Green and Amber Sites within the Core Public Transport Network

Table 4 below contains sites that are classified as 'Sites which have potential to be allocated for housing' and 'Sites which have potential but issues or not as favoured as green sites' that fall within 400m of the current core bus network.

The sites in this list are supported for housing growth.

Site specific mitigation would be required but it is unlikely that substantial bus service provision would be required at these sites (based on the current public transport network)

From a public transport perspective, we would encourage the prioritisation of these sites based on the proximity to the core public transport network and the bus service frequency levels.

Name: Annie McNally

Representor No: PRS03059

Representation ID: REP00387 Question Ref: G1

I think it is disgusting that the council are wanting to build on greenbelt land on proposed Plots 1336, 3373, 3372, 3373A, 3373B, 3373C, 1330B, 1330A, 536. And 3456A. It is an area of outstanding beauty where people enjoy walking, running, playing and riding horses. Many wild animals live in the fields and to take it away would turn this area into a concrete jungle. It would mean my view at the back would be eradicated, lowering the value of my house, but more importantly the pleasure I have everyday when I look across the field. This city needs green areas where we can walk and get away from the stresses of life. Also, to the rear of my property there is bindweed in the field which I believe would make it difficult for any developers to be able to build on that land. There are plenty of brown field sites which can be developed. Do not take away our green spaces. Totally outrageous.

Representor No: PRS00911

Representation ID: REP04561 Question Ref: H1

1330B Jude's Pond, Haigh Moor Road, West Ardsley. Change from Green to Red. The site is already part developed - enough! I refer to the consultation on the Leeds Local Plan and wish to object to the allocation of land in Tingley in the Outer South West document. My primary objection is to site 3373A, but the points raised are equally applicable to site 3373B, 1336 & 13308.

I appreciate the need for Leeds Council to provide for sufficient land to meet its housing requirements through the plan period. However, Para 151 of the NPPF requires that such allocations deliver sustainable development as this is the prime objective of the planning system that underpins the core principles of the planning system. I believe that these allocations fail to provide sustainable development for the following reasons, and so should be deleted from the plan:

Accessibility to Services

It is a core principle of the NPPF that development should be located where it has a good access to services to minimise the need for regular travel to those services by less sustainable methods. One of the core principles in Para 17 states that plan-making should 'actively manage patterns of growth to make the fullest possible use of public transport, walking and cycling, and focus significant development in locations which are or can be made sustainable.'

The area around the allocations has a limited availability to services, with those that exists being local scale (corner food shops) or near to capacity (Westerton Primary school). All other services that are necessary for residential development are located beyond walking or cycling distance where access to them is only really achievable by car. This is not sustainable development.

The nearest existing supermarket to the allocations is at Morley which is over 2km from the site. The nearest neighbourhood centre allocated in the Outer South West plan is at Ardsley West which is also over 2km, but in the opposite direction so preventing any linked trips to these destinations. There is no community centre, sporting facilities, parks, cinema, etc.

When looking at access to employment opportunities the position is no better as the nearest concentrations of employment is over 1.5km distant, but is not safely accessible to the sites as it located across the M62 motorway. Indeed, the Outer South West plan identifies 14 sites within Ardsley and Robin Hood as having 'greatest potential for housing' and notes 7 other existing permissions/allocations, yet there is not a single existing or proposed employment site in the ward.

Surely this cannot be the coordinated development as is required to deliver the economic role of sustainable development that described in Para 7 of the NPPF, and so will also impact on the ability of the site's to demonstrate the social and environmental roles demanded by that Para.

Urban Form

The allocations will essentially close a gap that currently exists between the development around Westerton Road and that around Haigh Moor Road. These are distinct areas and the open land between them is a notable feature that is appreciated by the residents of both areas, and those traveling between them using either Baghill Road or Haigh Moor Road. These allocations will close that gap and so coalesce these settlements to the detriment of the identity of both. Development on the scale envisaged, particularly when combined with other development sites, does not "respect the character and objectives of local communities" (quote from paragraph 8.4 of Plan Overview.)

The retention of a narrow strip between these areas (allocation 3373B) will serve little benefit in preventing this coalescence as it is simply too narrow, and is in a natural dip where it will not be seen in views from the existing settlements. Instead these views will be taken up by the urban development on the two allocations which, due to their position on the slopes of the valley, will inevitably be the scene from all aspects in and around the area.

Wildlife Loss

Whilst the land is largely used and so managed for agriculture, and so of lesser wildlife importance, its margins and trees/hedgerows will be utilised by a range of species. It will also offer important foraging and commuting habitat for locally important species including foxes and bats and its development will therefore reduce their habitat. In turn this reduces the benefit of retaining site 3373B which I note your document explains is as it offers an attractive local resource for walkers and cyclists.

Agricultural Land

The land is designated as Grade 3 in the Natural England MAGIC website classification, albeit that this is based on a higher level and dated assessment. In the 28 years that I have overlooked the site it has always been farmed for crops, except in occasional fallow years. In reality I believe that this regular use for productive agriculture, the gentle sloping nature of the site to assist its drainage, and its south facing aspect will mean that the land of site 3373A is actually Grade 3a or even Grade 2. These grades are Best and Most Versatile Agricultural Land that is protected from development by Para 112 of the NPPF.

The retention of such land is becoming increasingly critical due to the role that it plays toward delivering national food security and to reduce the distances travelled and so environmental impact of providing food. In addition, anaerobic digestion and other such energy production methods will become increasingly important in the future to national energy security. In turn this means that agricultural land will be required to provide fuel for these energy production methods. Areas of Best and Most Versatile agricultural land should be retained wherever possible as their higher quality ensures that they are better able to be flexibly farmed meet these needs.

Scale of Development

Throughout the NPPF it references the important role that communities have to play, with Para 1 stating that plans should 'reflect the needs and priorities of their communities'. The area around Westerton Road has seen extensive areas of residential development in the past 28 years, with that continuing with the development by Redraw Homes off Haigh Moor Road. There is clearly an argument that the area has accepted its fair share of development in recent years. The implications of further development in the area would be an increase in the population at a time when the services to support them are not available. InPhasing

Site Comments - Outer South West

Site reference: 1330B

Housing

Haigh Moor Road - Jude's Point, West Ardsley, WF3 1EF

Name: Anne Smith

Representor No: PRS00911

If it is decided that one or both of sites 3373A and 3373C are to be allocated then I request that they are phased for development in the later years of the plan. This would have twin benefits in allowing the recent growth in the area to be accommodated within the community and services to be established to support it, and would allow previously developed allocations and windfall sites to be developed first. Without that phasing the volume house builders in the market will inevitably take such greenfield sites forward as they are easier and so offer greater returns. This would not demonstrate the primacy of the plan-led system as required by Para 8.13.

Highway Capacity

An increase in housing in this area would only add to traffic problems along the A650 the A653 and other minor roads when there is an accident on the M62 when drivers try to find an alternative route.

Highway Safety

I note the intention to serve site 3373A by a single access point, being Upper Green Drive to Upper Green Avenue to meet Westerton Road opposite the primary school and then on via other routes to the main highway network. I cannot believe that a single access point is sufficient to service this number of properties, and cannot accept that the point at which it meets Westerton Road is appropriate.

Summary

I do not believe that the residential development of sites 3373A and 3373C would be sustainable development required by NPPF and so I ask that they be omitted from the Plan. If they are to be retained I request that they be phased to prevent development for a period of say 15 years to allow the community to become settled from recent growth, new services and employment opportunities to be developed and to allow the development of sequentially preferable brownfield sites elsewhere in the city.

I trust that these comments assist your consideration of the future housing allocations in this area. Please add my details to your consultation list so that I can be advised of any future consultation exercises of this nature.

Representor No: PRS01133

Representation ID: REP03207 Question Ref: H1

1330B

Lack of amenities – the amenities in the area cannot support the existing population of West Ardsley, never mind accepting an influx of possibly 5000 more.

- Virtually all the shops have closed over the years, there are now only 3 grocery shops in the area. Anyone living at the southern end of Haigh Moor Road has over 1 mile to travel to the nearest shop.

- The schools are overcrowded, Westerton Road has had more external classrooms added, so it cannot be extended. Hill Top School is nearly full now from the existing population growth, again it is extremely limited in expansion possibilities.

- Bus services are pathetic, services to Leeds, Dewsbury and Wakefield are hourly at best. Batley is only accessible from Wakefield –Batley Road. There are areas where buses have been removed completely. This week another service has been stopped.

- There are not any play areas for children, your own survey records this failing.

- There is only one medical centre with 8 doctors giving cover to some existing 15000 patients. To get an appointment with a specific GP can take 3 weeks, the centre has recently been extended to its limits so there is nowhere to go. Also there is only one pharmacist.

Traffic

All the roads in the area are in a bad state of repair, I have lived here for 28 years and Haigh Moor Road has never been resurfaced despite 3 new housing estates accessing it. In June 1992 the planning inspector denied a planning application (91/23/00350) for an annex for an invalid because although neither he nor his brother drove. The reason for this was "I am concerned that were an additional dwelling to be provided there would be no guarantee that it would not lead to additional traffic generation at some future time, perhaps through changed circumstances, with consequent adverse impact on highway safety." Yet here we are with a further 70 houses at Foxfields and Jude's Pond and a proposed 179 on these new sites, probably adding in excess of 500 vehicles to Haigh Moor Road.

There has been a water leak on HMR which despite being reported to Yorkshire Water is still flowing after 3 months and has now become 2 leaks. The western end of Westerton Road is in a dangerous state with potholes and speed restriction bumps. LCC appears to be unable to keep up with the maintenance of its roads in South Leeds.

LCC's attitude to this area seems to be that Ardsley is an outpost on the borders with Wakefield and Kirklees and beyond the borough or Morley, so we can be conveniently ignored. Ardsley is quite definitely being asked to provide the lion's share of new housing without any benefit, it has poor services and has become a dormitory area of Leeds.

Representation ID: REP03439 Question Ref: H1

I am writing to veermntly oppose the planning application that is scheduled on Haigh Moor Road, Tingley, Wakefield (plan 1330b map 33). My house will back onto the proposed site. The reason for the the objections stem from the distruction of scenic views across Emley Moor, views which we paid for, to flood risk. These are listed below.

1. Distruction of views.

Three years ago my family and I moved to our home for the secluded atmosphere and scenic views across Wakefield and Emley Moor. During searches, no building or construction plans were found. We have been disturbed by the construction of site 1330a, plans which were not displayed in our area, and we were never informed by mail about these plans. We have opposed plans on this site regarding work planned by Yorkshire Water and have full support from the offices of Ed Balls. We will again be writing to Mr Balls regarding future plans for our area.

2. Flooding Risk.

As my home is at the bottom of a PRIVATE dirt track, backing onto the proposed site, during bad weather we are at risk of flooding. The drainage is insufficient and the water runs down the dirt track and into my drive towards a man hole cover. The dirt from the track is carried by the water and blocks the man hole cover and the water level rises in my drive. I have often been out shovelling water for hours until the rain slows.

Towards the rear of my property on the proposed site, the water runs down from the hill where the houses are to be built and into my garden. Over the past three years we have been flooded on numerous occasions causing extensive damage to my lawn.

The four houses on our track have all reported flood damage in the past.

3. Bats.

We have bats flying in our garden on an evening. These have been reported to the Royal Bats Society. We have been asked to find their home, and we suspect that it is in a large conifer tree at the bottom of my garden next to the proposed site. This is ongoing!!!

4. Drainage.

During heavy rain, the drains in our area overflow, this has been reported to Yorkshire Water. The addition on plan 1330a has increased the risk as it has been joined to our small drainage system / man hole at the bottom of my garden. Increased planned houses planned for 1330b will have to be connected to this drainage, putting increased risk of danger on our system. The pipes run down the access dirt track and across my rear lawn, if the pipes were to burst, my home and garden would be destroyed.

Representation ID: REP03250 Question Ref: H1

1330B Tingley - Green to Red

During bad/wet weather, the drainage from this area is terrible and causes my south facing garden to flood. This has already been pointed out to Yorkshire Water. Extra housing would cause more drainage issues.

Many animals, bats, etc in fields.

New site better suited for dwellings. Houses built in this area will severely alter the view from my house, and impede my privacy.

Representor No: PRS03059

Representation ID: REP00387 Question Ref: G1

I think it is digusting that the council are wanting to build on greenbelt land on proposed Plots 1336, 3373, 3372, 3373A, 3373B, 3373C, 1330B, 1330A, 536. And 3456A. It is an area of outstanding beauty where people enjoy walking, running, playing and riding horses. Many wild animals live in the fields and to take it away would turn this area into a concrete jungle. It would mean my view at the back would be eradicated, lowering the value of my house, but more importantly the pleasure I have everyday when I look across the field. This city needs green areas where we can walk and get away from the stresses of life. Also, to the rear of my property there is bindweed in the field which I believe would make it difficult for any developers to be able to build on that land. There are plenty of brown field sites which can be developed. Do not take away our green spaces. Totally outrageous.

Representation ID: REP00848 Question Ref: H1

sites 3373A, 3373B, 3365,1258,site 1330B 464 houses in such a small vicinity is unsustainable, there are currently just over 300 pupils at Hill Top Primary School with no room for any expansion, the school is full and the same is true of Westerton. Leeds City Council have in their allocation plan confirmed that Ardsley and Robin Hood have a deficiency in parks and gardens (the only area in Leeds South West to be deficient)natural greenspace should be used to reduce the deficit and improve our community. Our GP surgeries are at breaking point the surgery at Leigh View was recently extended and it's difficult to envisage how this could be extended further.Further erosion of the demarcation between West Ardsley & Tingley – , the two areas will be barely distinguishable from each other which is contrary to the Councils policy SP1 which clearly states smaller Settlements will contribute to development needs, with the scale of growth having regard to the settlement's size, function and sustainability. If these plans were approved it will no doubt result in urban sprawl with no identifiable boundaries. Our fields provide a public amenity development would virtually eliminate the open centre and consolidate the semi-rural group of settlements into a predominantly urban residential area". This view was endorsed by the Secretary of State in their past decision letter.Our road network was not built to support the existing volume of traffic , we do not have the infrastructure to support development of this scale, our public transport links are very poor with only one bus an hour into Leeds, the only viable means of transportation is by car which will have a cumulative impact on the A650 and A653 which are already congested.

Representation ID: REP00848 Question Ref: General comment

Site 3373C Objections1. Local character and identityDevelopment of this site would be contrary to the following sections of the Council's policy SP1 in the Core Strategy:1. SP1 (i) states: "Smaller Settlements will contribute to development needs, with the scale of growth having regard to the settlement's size, function and sustainability." Site 3373A, with its estimated capacity of 130 dwellings, does not have regard to the size, function and sustainability of West Ardsley.SP1 (iii) states: "For development to respect and enhance the local character and identity of places and neighbourhoods". The local character and identity of West Ardsley would be seriously threatened by 3373a, 3373C and 1336, and would make its component areas of Upper Green, Haigh Moor and Hill Top barely distinguishable from each other.My view accords with three decision letters from the Planning Inspectorate which were used in the Council's own evidence to the Unitary Development Plan public inquiry in 1995. In paragraph 39 of his report on the Morley Local Plan, the inspector considered that the planned development at Haigh Wood (site WA2H) would have a "very serious impact upon the character and environment of West Ardsley". He concluded in paragraph 10: "In the past, development in the Morley area would appear to have been sporadic and opportunist, placing the identity of the smaller settlements at risk and tending towards the creation of amorphous sprawl of development across the area along the length of the A650 Bradford to Wakefield road. In my view, the further diffusion of the existing loosely-knit settlement pattern should, as far as possible, be resisted."Considering appeals in 1986 on 81/23/00212 and 81/23/00213 (broadly the same area as LDF sites 3373A/B/C and 1336) the inspector said "It would virtually eliminate the open centre and consolidate the semi-rural group of settlements into a predominantly urban residential area". This was endorsed in the Secretary of State's decision letter.In 1994, a third inspector dismissed an appeal to develop land at Arthington Close near the the edge of Haigh Wood because it would "unacceptably erode the fringe of this rural area and would lead to pressure for further encroachment of residential development, most particularly in the fields to the west..."Although some years have passed since these decisions, the character and environment of the area are still semi-rural and just as delicate. When cogent arguments have been repeatedly made against development of the 3373 areas by the Secretary of State, by three planning inspectors and by Leeds Council itself (in evidence to the UDP inquiry), there can be no justification for sites 3373A, 3373C and 1336 being pursued for residential development in the LDF. They should instead be reclassified as "red" and withdrawn from consideration for development when producing the next stage of the plan.2. Damage to Haigh Wood and Baghill beck valleyDevelopment of this site would be contrary to the Council's policy P12 in the Core Strategy:"The character, quality and biodiversity of Leeds' townscapes and landscapes, including their historical and cultural significance, will be conserved and enhanced to protect their distinctiveness through stewardship and the planning process." The secluded Haigh Wood valley comprises the central portion of site 3373A, including part of the wood covered by a Tree Preservation Order. Residential development would prejudice the objectives underlining this policy as set out in paragraphs 5.3.46 to 5.3.48 of the Core Strategy including: "The Council seeks to protect and enhance the varied landscapes of Leeds and the assets they contain, from valued local trees, the countryside to nationally designated landscape, fauna and flora". This view was endorsed by three planning inspectors and again in the Council's evidence, given by Mr G B Andrews, at the UDP inquiry. In his paragraph 4.3.6, Mr Andrews stated: I refer to the conclusions reached by the inspectors at the two subsequent appeal cases in 1985 and 1994. In each case it is acknowledged that the Haigh Wood area is of value as an area of attractive open farmland with a rural character and provides an important amenity in the local area". Even the Council's own assessment for the LDF states that the site is: "Not supported (RED). This site includes Haigh Wood and Baghill Beck Local Nature Area which fall under UK Biological Action Plan priority habitats - a mixture of woodland, scrub and grassland habitats alongside Baghill Beck. There are a number of wide hedgerow/woodland belts throughout the site that provide a valuable habitat. Water vole has been recorded on the Hey Beck. The Baghill Beck flows into this water course and could support this species. Bats to consider."3. FairnessThe Core Strategy seeks to be "fair". The word is used in paragraph 1.2 and again in 1.14. Yet the proposed green housing sites when taken together would definitely not be fair to West Ardsley and Tingley. No justification has been given as to why there is such a concentration here, nor any evidence of local need. Indeed, paragraph 4.6.14 states that "The SHMA 2011 was not able to identify any geographically specific need for new housing based on population growth." The sites seem to have been assessed individually rather than their cumulative impact. This impact is potentially very much greater when considered alongside Kirklees Council's proposals for the Chidswell area. 4. Highway access The Upper Green culs-de-sac and Hill Top Lane cul-de-sacs are not suitable to serve more houses. They would become much less safe for children to play in and the already severe dangers at school times would be exacerbated.5. SchoolsPrimary and secondary schools already full and difficult to expand further.6. Agricultural landGood quality agricultural land would be lost.7. ViabilityExtra costs from: a. parts of 3373A and 3373C have serious levels problems and look undevelopable; b. bell pits known to exist in the area from former mining; c. elimination of Japanese Knotweed.The site on Westerton Road from Regency Gardens to Westerton Wood if developed will see 117 new homes - this land is currently classed as green belt (site 3365 = 83 homes and site 1258 = 34 homes) development here will represent a major incursion into the Green belt and will create further pressure on Ardsley reservoir as a local beauty spot. Development of sites 3365 and 1258 will result in the loss of valuable agricultural land, there are a number of wide hedgerow and woodland belts throughout the site that provide a valuable habitat for wildlife in particular bats. Development of the sites on Westerton Road will result in the amorphous sprawl of development across the area along the whole length of the Westerton Road.Site 1330B is an extension of the building that is currently ongoing adjacent to Jude's pond - and is for a further 32 houses ! This site has major highways access issues and has less than the recommended visibility splay for highways safety - further development of this site will exasperate current problems regarding drainage on the land - Haigh Moor Road residents already have to deal with flooding of the pavements and highways in the vicinity of Jude's pond. 464 houses in such a small vicinity is unsustainable, there are currently just over 300 pupils at Hill Top Primary School with no room for any expansion, the school is full and the same is true of Westerton which as you know was a small village school 20 years ago but is now one of the biggest primary schools in the Leeds district and all because of the amount of building that has taken place over recent years.Leeds City Council have in their allocation plan confirmed that Ardsley and Robin Hood have a deficiency in parks and gardens (the only area in Leeds South West to be deficient) - our children already have very little designated play areas, they have also confirmed that we are deficient in outdoor sports areas and facilities for children to play. We have however got a surplus of natural green space which is currently under threat of housing - if this natural greenspace is to be used for any purpose, surely it should be used to reduce the deficit and improve our community. Further reduction of amenity greenspace in an area which is seeing more and more housing development is unfair and unsustainable.Our GP surgeries are at breaking point with current waiting times for appointments being in excess of two weeks, the surgery at Leigh View was recently extended and it's difficult to envisage how this could be extended further to serve the population boom that will ensue if all these sites are developed.Further erosion of the demarcation between West Ardsley & Tingley - soon the two settlements will merge into one and West Ardsley as a separate community will be subsumed into its near neighbour, the two areas will be barely distinguishable from each other which is contrary to the Councils policy SP1 which clearly states smaller Settlements will contribute to development needs, with the scale of growth having regard to the settlement's size, function and sustainability. If these plans were approved it will no doubt result in urban sprawl with no identifiable boundaries.Our fields provide a public amenity for dog-walkers, cyclists, ramblers and local residents alike and It would virtually eliminate the open centre and consolidate the semi-rural group of settlements into a predominantly urban residential area". This view was endorsed by the Secretary of State in their past decision letter.Our road network was not built to support the existing volume of traffic , we do not have the infrastructure to support development of this scale, our public transport links are very poor with only one bus an hour into Leeds, the only viable means of transportation is by car which will have a cumulative impact on the A650 and A653 which are already congested.

Hi,

I would like to object against the planning proposals for the following sites on Map 33 (off Westerton Road)

1336
3373B
3373A
1330B
33732
3365
3373C
3456A
3456B
1258

I suggest that these should all be changed to RED due to the following reasons:

Too much traffic already so roads will be extremely busy right outside my front door. I have young children and will be scared for their safety.

Services such as Doctors surgery's, dentists, local hospitals, schools, supermarkets already too busy so won't be able to cope

Less water will be absorbed into the ground resulting in more flooding in our gardens.

This is currently already happening in several houses on Westerton Road including mine.

There are bats, foxes, owls, frogs, newts and many birds living in the area especially on sites 1336, 3373A, 3373B, 3373C. Should these not be protected?

House prices for homeowners in the area already will decrease.

We moved to the area because of the greenery and our view will be spoilt.

The sewerage system in place on Westerton Road recently failed causing waste from the sewers to overflow into nearby houses. This was due to the recent housing developments that have recently been built nearby so the sewerage system was unable to cope. This could very likely happen again.

Representation ID: REP05702 Question Ref: General comment

Firstly I would like to express my disappointment and embarrassment towards the councils plans for the proposed plans listed below. I understand the reason behind the lack of communication with the residents in the area may be beneficial to the local council and certain government groups. It obviously cuts down on man hours and paperwork.

I would like to object against the planning proposals for the following sites on Map 33 (off Westerton Road)

1336
3373B
3373A
1330B
33732
3365
3373C
3456A
3456B
1258

The infrastructure in this area will struggle to cope with the demands of the services required.

The area is attracting wildlife not seen in built up areas. It seems a shame to disregard the wildlife issue I'm sure if a full environmental survey of the area was to be carried out this would scupper the planning permission. But again that would be an extra cost to the council which would have an impact at year end when the books are balanced.

Representation ID: REP05759 Question Ref: H1

I wish to object to 3373A, 3373B & 3373C.

[x]

I wish to object on the following grounds:

. The Haigh Wood site reference is 3373, and it is split into 3 parts:

. 3373A is land between Westerton Road & Haigh Wood. This has been assessed as suitable for residential development, with a capacity of 130 houses.

. 3373B is Haigh Wood itself. This has been assessed as unsuitable for residential development because of the topography of the site and access

. 3373C is the fields between Haigh Wood & Woollin Crescent, linking right round to Nook Farm.

The proposal for site 3373A (This is the site that runs from the top of Baghill around the back of Arthington Close and Upper Green and will finish on Westerton Road opposite Lonsdale Rise) is to build 130 houses. Lee gap Fair is held twice a year in these fields, the fair is the oldest horse fair in England dating back to 1136 and forms part of the history and heritage of the area.

The 3373C site which will run from the top of Hilltop Lane and carve up all the fields from there to Nook Green on Haigh Moor Road is for 144 houses. It can be argued that the highways infrastructure for Site 3373B is inadequate, there are Highways concerns re poor accessibility for the number of houses proposed and then there is the issue of Highways safety with the junction of Hilltop Lane being within 100 metres of the primary school. All the issues on the attached letter are also relevant for site 3373C.

The site on Westerton Road from Regency Gardens to Westerton Wood if developed will see 117 new homes - this land is currently classed as green belt (site 3365 = 83 homes and site 1258 = 34 homes) development here will represent a major incursion into the Green belt and will create further pressure on Ardsley reservoir as a local beauty spot. Development of sites 3365 and 1258 will result in the loss of valuable agricultural land, there are a number of wide hedgerow and woodland belts throughout the site that provide a valuable habitat for wildlife in particular bats. Development of the sites on Westerton Road will result in the amorphous sprawl of development across the area along the whole length of the Westerton Road. Site 1330B is an extension of the building that is currently ongoing adjacent to Jude's pond - and is for a further 32 houses ! This site has major highways access issues and has less than the recommended visibility splay for highways safety - further development of this site will exasperate current problems regarding drainage on the land - Haigh Moor Road residents already have to deal with flooding of the pavements and highways in the vicinity of Jude's pond.

Please note that all these sites are in addition to any planning applications that have already been approved.

464 houses in such a small vicinity is unsustainable, there are currently just over 300 pupils at Hill Top Primary School with no room for any expansion, the school is full and the same is true of Westerton which as you know was a small village school 20 years ago but is now one of the biggest primary schools in the Leeds district and all because of the amount of building that has taken place over recent years.

Leeds City Council have in their allocation plan confirmed that Ardsley and Robin Hood have a deficiency in parks and gardens (the only area in Leeds South West to be deficient) - our children already have very little designated play areas, they have also confirmed that we are deficient in outdoor sports areas and facilities for children to play. We have however got a surplus of natural green space which is currently under threat of housing - if this natural greenspace is to be used for any purpose, surely it should be used to reduce the deficit and improve our community. Further reduction of amenity greenspace in an area which is seeing more and more housing development is unfair and unsustainable.

Our GP surgeries are at breaking point with current waiting times for appointments being in excess of two weeks, the surgery at Leigh View was recently extended and it's difficult to envisage how this could be extended further to serve the population boom that will ensue if all these sites are developed.

Further erosion of the demarcation between West Ardsley & Tingley - soon the two settlements will merge into one and West Ardsley as a separate community will be subsumed into its near neighbour, the two areas will be barely distinguishable from each other which is contrary to the Councils policy SP1 which clearly states smaller Settlements will contribute to development needs, with the scale of growth having regard to the settlement's size, function and sustainability. If these plans were approved it will no doubt

1330B Jude's Pond, West Ardsley – The consultation document does not make clear the current status of this site. Recent experience of the "development" of the adjoining site does not inspire confidence in the developer's approach to working with the local community. If done with due care and attention to the local environment and with respect for the local community this would be a relatively sustainable addition.

Representation ID: REP07292 Question Ref: H7

Dear Madam

Allocations Issues and Options Document - Sites 536 (Nook Farm) , 1330 B (Adjacent to Judes Pond), 1336 (Westerton Road, and 3373 A, B and C (Haigh Wood)

We act on behalf of the West Ardsley Consortium that has made formal comments to the Leeds Site Allocations Issues and Options documents. We enclose a copy of the Document submitted with the formal response for your information.

Our clients are interested in sites 536 (Nook Farm) , 1330 B (Adjacent to Judes Pond), 1336 (Westerton Road, and 3373 A, B and C (Haigh Wood) and have previously made representations for the sites to be allocated, along with a substantial area of ecologically maintained open space centred around the Haigh Wood area.

Having seen the draft proposals our clients are supportive in principle of the Councils approach to identifying a large portion of the land promoted by them for residential development. The areas identified as "Green" (for development) in the Issues and Options document at Haigh Wood amount to 16.83 Ha of land with a suggested dwelling capacity of over 400 units (at a reasonably low 25/Ha). The areas identified as "Red" (felt to be not suitable for development) amount to 17.5 Ha. This sets an approach of slightly over half the land being protected from development.

We note that the site known as Nook Farm (536) is an existing UDPR commitment and has no policy designation that has or would suggest anything other than its suitability for residential development. That site also has (contrary to the suggestion in the Issues and Options document) an extant planning permission. The details of this are set out in our formal representations.

Having reviewed the indicative boundaries suggested between the "Green" and "Red" sites in the Issues and Options document and undertaken a detailed assessment against trees, topography, the LNA of Haigh Wood and the stream running through it, whilst acknowledging the need for an uninterrupted green corridor separating the north west and south east areas of land, our clients are firmly of the view that the Councils preliminary work does not produce appropriate boundaries between development allocations and non development allocations. For example as figure 3 in the attached document shows land is identified by the Council for development in site 3373A that includes part of the LNA, the trees of Haigh Wood and the stream running through it, whilst seeking to protect from development land to the south east which has none of those considerations applying to it.

Utilising the work already done on ecology, trees and hedges, landscape and topography, our Clients have carefully considered the Councils objectives and aspirations from the comments in the tables and pro formas associated with the Issues and Options document. They have produced a revised masterplan and from that been able to identify appropriate development and allocation boundaries. These maintain a broad green corridor through the valley, protecting ecological interests, trees and the stream as well as views and the "open feel" of the valley itself. In particular this has not only widened the broad swathe of green between the development areas, compared to the earlier 2012 masterplan, but removed any road connections across the valley.

The resultant masterplan has been informed by all the Consortium team's professional disciplines and the changed highways connections fully evaluated to ensure they work appropriately.

The outcome is that of the area in the UDPR that is identified as NI 1 (some 36.14 Ha) only 40% is now proposed for development. The suggested allocations (boundaries shown in red on Figure 6 of the attached document include (so that the allocations are not excessively subdivided) substantial green corridors and strategic planting, amounting to some 3.24Ha. These run along the existing and proposed pedestrian and bridleway access corridors to the valley and the Wood. The suggested total area of the allocations (including the 3.24 Ha of undeveloped green space) is under half of the current NI1 land at 17.66 Ha. We believe this provides the right balance of development and protection of the wider site.

We note that the areas identified as "Green" in the Issues and Options document in this Outer South West area are insufficient by some margin (1,432) to meet the Core Strategy suggested proportion of housing for the area, even taking into account (and not questioning) the amount of development to come forward from permissions and existing allocations. There should be no doubt that all "Green" sites should therefore go forward for allocation. Indeed more will need to be found from "Amber" or even "Red" sites to provide sufficient land. In addition, there are proportionately far fewer "Green" sites (compared to "Amber") in East and West Ardsley than there are in Morley or the rest of the Outer South West.

The site at Haigh Wood with its non greenbelt status and accessibility and sustainability credentials provides a very good location for development and the provision of material environmental benefits through protection, increased access and environmental management of the Wood itself. As there have to be exceptional circumstances to take land out of the greenbelt, there must correspondingly be exceptional circumstances not to develop at Haigh Wood ahead of greenbelt land.

For all of these reasons our clients, look forward to working with the Council to bring forward development in line with the attached revised masterplan, which we believe fully addresses all comments made in the Issues and Options document and the related proformas about the land at Haigh Wood.

Yours faithfully

[x]

Representation ID: REP07983 Question Ref: H1

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Green Sites outside the Core Public Transport Network

Table 1 below contains sites that are classified as 'Sites which have potential to be allocated for housing' but fall outside 400m of the current core bus network. Consideration needs to be given to if these sites would be able to meet the LDF public transport accessibility requirements should housing be brought forward. Significant developer contributions will be required at these sites to improve the public transport to meet the council LDF accessibility policies; particularly in the larger sites should these be brought forward for development. These include SHLAA ref: 2062, 1032, 1046, 1017 & 1055.

Sites which fall marginally outside the 400m catchments and have high bus frequencies or are small sites low capacity are less of concern but are flagged up nonetheless.

The table also includes accessibility assessments results to access other services and facilities within acceptable journey times on public transport.

[see table in full representation submitted which lists sites]

1332 Penfields, Drighlington, Site Capacity 414, Ward Morley North

Development would round off the settlement and has a defensible boundary to the south. The concerns regarding infrastructure and access to busy main roads apply to this site.

Name: A Hampshire

Representor No: PRS00149

Representation ID: REP00923 Question Ref: H4

1332 - Red. Far too valuable as Green Belt to be covered by 414 houses. Detrimental to the village. Too much traffic. School already too small - loss of green space. Very strong objection to 414 houses on this site.

Name: Wenda P Whitehead

Representor No: PRS00312

Representation ID: REP04786 Question Ref: H4

1332 Penfields, Drighlington, Site Capacity 414, Ward Morley North

Development would round off the settlement and has a defensible boundary to the south. The concerns regarding infrastructure and access to busy main roads apply to this site.

Name: L. A Mitchell

Representor No: PRS00327

Representation ID: REP02264 Question Ref: H4

2124 All sites in Drighlington should be red sites. Should be green belt, how can Wakefield Road cope with with any more traffic, the roads are already coping with very heavy traffic where would access be. The new by pass is already full of traffic again the village does not have infrastructure for any more people, transport or houses. The schools are full. We had two schools, one has now closed, already the new school has had an extension - so where will all the children go? Why not refurbish the disused mill on Whitehall Road for housing instead of using green field sites?

Name: Doreen Goor

Representor No: PRS00329

Representation ID: REP02274 Question Ref: H4

Amber to red. 2124/1332 - Car access not suitable

Name: P And K. H Copley

Representor No: PRS00331

Representation ID: REP02276 Question Ref: H4

Amber to red. 2124, 1332. Entrance and exits dangerous and not enough room.

Name: J Glazzard

Representor No: PRS00332

Representation ID: REP02277 Question Ref: H4

2124, 1332. Drighlington cannot take any more property/schools/doctors/sewage/shops. Roads overcrowded.

Name: Janice Beever

Name: Jennifer Adams

Representor No: PRS00456

Representation ID: REP02404 Question Ref: H3

1332 – This would be my preferable site for this area as it has a natural defendable boundary with the A650, and would round off the parish without encroaching on green belt.

Name: Elaine Thorton

Representor No: PRS00584

Representation ID: REP02542 Question Ref: H4

1332- Land at Penfield Drighlington. Amber to Red this site for 414 homes would place if completed an intolerable burden on local infrastructure. The local roads are not capable of handling the numbers of vehicles movements to and from the site. If a separate entrance / exit were constructed on the A650 Drighlington bypass this in turn would overburden a very busy junction 27 of the M62 / M621 and associated arterial roads.

Name: Susan Wood

Representor No: PRS00739

Representation ID: REP02742 Question Ref: H4

1332 – This site would finish the development that already exists up to a defensible boundary. Allowing good access to the motorway network. There are excellent local amenities.

3064 Greystone farm/bungalow, Wakefield Road. Amber to Red.

No we think it should be Red as it joins Gildersome and Drighlington and has no defendable boundary.

Representation ID: REP05934 Question Ref: H4

1332 Adwalton - Penfields. Amber to Green.

Yes this site should be Green as it has good access via Walton Drive and fieldhead lane. Drainage is good as it would not cause further overuse of Drighlinton's sewers as it could go to Birstal and down Geldard Road.

Site 1332

As noted in the introductory chapters, this report is to promote the merits of site 1332, a 18.4 hectare site located to the south of Drighlington. The site has been assessed by the council and classified in the 'amber' category of sites. Judging from the limited justification provided, this is due to alleged highways concerns regarding poor accessibility, limited access provision and the sites current designation as Green Belt.

4.4 Further work has been undertaken by a highways consultant, urban designers and planners in order to overcome these concerns. Taking each point in turn:

Accessibility and access provision

4.4 A highways consultant has been appointed to carry out a feasibility study into possible access routes. The findings are detailed in a standalone report but the conclusions have influenced the indicative master plan contained in the promotion document.

4.5 The Walton Drive access to the site will be retained in its current position and used as the main access to the site for vehicles, particularly for the first phase of development (circa 250 dwellings). A second vehicular is available to the site (accessing the farm at the western end of the site) however for the purposes of this study, vehicular access to the site will only be considered via Walton Drive.

4.6 It is proposed to extend the carriageway and footways of Walton Drive into the site whilst maintaining the existing 5.5m wide carriageway and 2m wide footway provisions to both sides of the carriageway. Within the site, it is proposed to widen the footways to 3m (on both sides of the carriageway) to provide off -road pedestrian-cycle infrastructure. This is in accordance with Leeds City Council's Street Design Guide.

4.7 The access route from the site to Wakefield Road is via Walton Drive, Margetson Road and Oakwell Road. These routes are between 5.5m and 7.3m wide with footways to both sides of the carriageway, street lighting and built to appropriate standards.

4.8 There is the possibility that some traffic may choose to use Fairfax Avenue as part of the route to Wakefield Road/King Street however given the relatively narrower roads and approach to its junction with Wakefield Road, and the restricted visibility out of the junction, it is likely that drivers would prefer the use of Oakwell Road.

4.9 Assigning the full quantum of development generated traffic via the Oakwell Road/Wakefield Road junction considers the worst case approach and should drivers choose to use alternative routes, this is likely to minimise the impact at the Oakwell Road/Wakefield Road junction.

Assessment of current Green Belt role

4.10 The submission draft of the Core Strategy acknowledges that land sufficient to provide, as a minimum, 66,000 new homes over the plan period. In order to fulfil this commitment, it accepts that in addition to focusing development to the most sustainable areas of the district, appropriate sites will have to be allocated that may currently be designated as Green Belt. An approach consistent with the Framework. While the need for sites currently designated as Green Belt to be brought forward is accepted, preference should be given to those sites that no longer fulfil any of the five purposes for its original inclusion.

4.11 In order to establish to what degree each of the sites put forward contribute to fulfilling a Green Belt purpose, the council have carried out a very basic Green Belt assessment. Four of the purposes for including land with the Green Belt are listed in the assessment section of the proforma. It is important to note that the fifth reason has been omitted. The Core Strategy policies will aim to encourage regeneration within the urban area. While it is a priority to bring forward urban regeneration sites in preference to Greenfield sites, this is only possible where such sites can provide enough deliverable sites to meet the identified requirements. By the stance taken in the Core Strategy, this is clearly not the case in Leeds for the plan period. So for the purposes of assessing a sites suitability in terms the level of conflict with the purposes of being in the Green Belt, only the remaining four will be applied.

1. Check the unrestricted sprawl of large built up areas

4.12 The conclusions of the council's assessment on this purpose are positive. We agree that the site is well connected to the built up area and development of the site would effectively round off the settlement pattern. Those two factors mean that there is a 'low potential to lead to unrestricted sprawl'.

2. Prevent neighbouring towns from merging

4.13 The site is located on the southern edge of Drighlington. The nearest adjacent settlement is Bristall, 0.5 miles to the south. The two are separated however by the A650 bypass and the M62 motorway which acts as a natural barrier preventing the sprawl of the settlement further to the south.

4.14 Again the councils overall conclusions on coalescence that there will be 'no merging of settlements' is positive and welcomed.

3. Assist in safeguarding countryside from encroachment

4.15 When assessing the sites role in relation to the above, the council have concluded that the sites does not perform an important role in safeguarding the countryside from encroachment. Again this stance is welcomed but there are a few obvious points which need clarification.

4.16 The site is currently in private use and is actively used in connection with a small holding business. The site is bound on all four sides by either a post and rail fence, mature

Representor No: PRS05410

hedgerows, or a steep embankment overlooking the bypass. Access into the site is therefore limited to two locations, off Walton Drive to the north and field head lane to the west. Both these access points are private and adequately secured to prevent unauthorised access. There is however a clearly defined footpath which runs from Walton Drive, through the middle of the site, across the bypass, the M62 motorway and into the Birstall retail park to the south. This fulfils an important role in improving accessibility for existing residents living in Adwalton. As demonstrated in the indicative master plan within the promotional document, this would be improved and incorporated around the residential development.

4. Preserve the setting and special character of historic towns

4.17 The Site is not located within or adjacent to a conversation area, listed building or other historical feature. This criterion is not considered applicable in this instance.

Representation ID: REP06016 Question Ref: H11

Site 1332

It is anticipated that once adopted the emerging development plan will be in place for the next 15 years. Our client therefore accepts that phasing of the sites across the Outer South West area will need to take place.

4.45 The site is largely vacant and is being actively promoted by the current land owners so its immediate availability should not be a concern. Should the site be allocated for residential development it could be brought forward almost immediately.

4.46 Given the size of the site, construction will need to be carried out on a phased basis. Alongside the preparation of the indicative master plan, further work has been carried out to demonstrate how the site could be developed on a phased basis.

See also representation submitted for full details.

Name: Neil Dawson

Representor No: PRS05884

Representation ID: REP06563 Question Ref: H4

Suggested sites from Amber to Red;

309
1067B
1069
1143F
1220A
1274
1275A
1279
1332
2105
2155
3000
3064
3078A
4004

These sites are almost all located within the existing Green Belt and expansion into the Green Belt would lead to increased urban sprawl between the various townships in the Outer South West, and lead to coalescence between communities

Development of the Green Belt sites would also reduce the open green area and provide encroachment into the countryside around Morley and other smaller townships.

In addition there is insufficient road capacity and little scope for expansion for other necessary services. There would be a requirement for new or upgrading of existing roads which would therefore favour development on sites that are already located within the Morley or the Leeds Urban areas rather than eroding the Green Belt further.

Site 3078A is close to potential development in Kirklees and could lead to the complete erosion of the Green Belt and open green space between Leeds and Kirklees.

Any further development at sites 1275A and 1279 would reduce the Green Belt between the existing residential boundary and the A653 Dewsbury Road to a narrow strip which would put pressure in future years to extend residential use further east.

See rep for full details.

Representation ID: REP07983 Question Ref: H4

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Amber Sites outside the Core Public Transport Network

Table 2 below contains sites that are classified as 'Sites which have potential but issues or not as favoured as green sites' but fall outside 400m of the current core bus network. Consideration needs to be given to if this site would be able to meet the LDF public transport accessibility requirements should housing be brought forward. We are be minded to recommend that these site were not prioritised for housing until other more accessible site have been considered. Sites which fall marginally outside the 400m catchments and have high bus frequencies or are small low capacity sites are less of concern but are flagged up nonetheless.

Housing

Westerton Road (land at), West Ardsley

Name: J Vaughan

Representor No: PRS00152

Representation ID: REP01822 Question Ref: H1

1336 - Green to red. There is already a large amount of new building in the area and already congested (and exceedingly badly maintained) roads, schools and other services cannot cope. As there seem to be hundreds of empty flats in the city centre, I question the necessity of so much more new housing!

Name: Sally Buttler

Representor No: PRS00162

Representation ID: REP01834 Question Ref: H1

1336 - Should be changed Green to Red. Site is agricultural with no access, there is a world shortage of agricultural fields, it will ruin wildlife, peoples quality of life, character of the area. Children's safety will be impaired and is currently a safe cul de sac.

Name: Katie Kerr

Representor No: PRS00163

Representation ID: REP01836 Question Ref: H1

1336 - Already traffic/parking issues at peak times/school times. Increased housing means increased population increased traffic issues, school places? Reducing effectiveness of services available to public eg doctors.

Name: John Hill

Representor No: PRS00171

Representation ID: REP02097 Question Ref: H1

1336 - Green to red. The area will be too congested. Westerton Road will be too congested.

Name: Jill Butler

Representor No: PRS00189

Representation ID: REP06966 Question Ref: H1

3373a
[and assume 1336]
I wish to strongly object to proposed green belt sites adjacent and behind my house being released as suitable for building. The proposed sites are shown on Map 33 - 3373a. My house was only built 3 years ago and was bought specifically for the semi rural aspect views and the fact it is safe for children in a cul-de-sac with no thru traffic. I am extremely appalled and concerned that this proposal has been addressed without informing us at all. This will result in us having to move home that we have invested every penny in and worked so hard for and a loss in value of at least £50-75k. And will now make it very difficult to sell. I am absolutely disgusted and will do everything in my power to stop this happening. I will also be attending the town hall meeting and will be involving all local MPs.

Representation ID: REP02128 Question Ref: H1

1336 - Green to red.

Existing agricultural land, access problems, schools full, parking etc. No access to be made from Upper Green Drive will cause child safety issues.

Representation ID: REP02645 Question Ref: H1

1336 +3337/3A Westerton Road/Haigh Woods. Red

This is greenbelt that is adjacent and back of my house directly. My house was built and bought only 2 years ago for the view and cul-de-sac position for my child we paid an additional £60K for this privacy. This site will ruin my property and our lives and cause safety issue with through traffic end of Uppergreen Drive and rear.

Name: A Godfrey

Representor No: PRS00852

Representation ID: REP02869 Question Ref: H1

3373A / 1336 -
Green to Red

Congestion

It now seems the norm that each house equates to two vehicles so the proposal of 205 houses means 410 additional cars.

We already experience severe traffic congestion at peak school times. From my observation the vast majority of parents bring their children to school in a car despite the fact that they live in the immediate locality.

The problems that this congestion brings, are dangerous and illegal parking with complete disregard to the safety of pedestrians and other road users. Cars are parked on corners at road junctions, on the pavement where passing with a pram is often impossible and parking already stretches down both Upper Green Way and Avenue. When challenged the drivers often become abusive. The police are aware of this situation and do appear to monitor it from time to time.

Schools

Can the local schools cope with all the additional pupils? Westerton School, Woodkirk School and Blackgates School have already been extended. Increased classroom sizes would have a detrimental effect on the teaching and learning of the children.

Lee Fair

Lee Fair has existed in this locality for hundreds of years and the locals are proud of its historical legacy. Would the Fair disappear completely or be moved away from the area. It would be very disappointing if this happened.

3373a Upper Green, Tingley/3373c Upper Green Tingley/1336 Upper Green Tingley - Green to Red
SITE ALLOCATION CHANGES —SITE NUMBERS 3373A / 3373C / 1336

We are completely against the development of the above sites for a number of reasons, both personal and in the overall interest of the people living within Greater Morley.

- Access —Suggested access to the new sites through current 'Upper Green' roads would not be viable as road width/layout does not comply with planning requirements for a throughroad.

At present certain areas of the roads cannot accommodate two cars at the same time, more houses mean more traffic. This could lead to huge health and safety issues for motorists and pedestrians alike. Currently traffic on these roads are already at a high especially at peak times and the start and end of the school day (Westerton Primary is directly opposite upper green and is extremely busy at drop off and pick up times).

- Local framework —The local schools (both primary and secondary) are already full and have waiting lists for children already living in the area. Primary schools such as Westerton (already considered a large primary with 100 children per year group) is full with a considerable waiting list, Blackgates Primary has already been expanded to cope with the demand and has no further scope to expand even more. Secondary schools such as Woodkirk and Morley Academy are full with waiting lists. Leeds City Council are aware that there are not enough secondary school places available in this area for children already in the state school system and have granted authority to build a free school in Leeds City Centre (to open 01/09/14). With this in mind perhaps redevelopment of areas surrounding the City Centre or areas within the City Centre should be considered.

- Local Doctors surgeries are already full and continue to take on new patients.

Appointments are non-existent with most people having to go to drop in clinics to sit and wait (sometimes for up to 2 hours). This is hugely problematic for vulnerable patients (small children and the elderly) that sometimes require immediate attention. As for registering with a local NHS dentist— it's virtually impossible!

- Impact on environment. Planning permission stated that when our house was built (2008) the builders had to maintain the few trees between adjoining properties because of impact on the local environment and also to provide screening. Yet the same council with their new plans are happy to see the destruction of acres of protected trees and shrubs (Haigh Woods). This would have a huge impact on wildlife where we have a thriving bird population (which is currently in decline nationally) and a number of protected bats in the area. These birds and bats live/breed and feed in the zones currently highlighted for development. Tingley's green fields are already in decline, brownfield sites should be considered for redevelopment before we destroy our environment further. Planning permission for 20,000 houses have already been granted within the Leeds Area that haven't been built yet, surely these houses should be built and derelict areas redeveloped before we consider destroying green fields and wooded areas.

- The value of current properties will be greatly affected by the addition of housing on the sites stated. Currently Upper Green Drive is one of the most expensive streets for house prices in WF3, houses are built to a high standard and of similar size/value. When we purchased our house in 2008 we paid a premium rate which took into account not only the quality of the house but the area in which the house was situated (idyllic views of green fields and woods). The planned development would have a huge impact on property value and with most houses on the street having been newly built or recently purchased (valued according to the location/setting) there is a major concern that many families would face the possibility of negative equity. The current economic climate is already taking its toll on many families; this would further financially impact them.

- The value of current properties will be greatly affected by the addition of housing on the sites stated. Currently Upper Green Drive is one of the most expensive streets for house prices in WF3, houses are built to a high standard and of similar size/value. When we purchased our house in 2008 we paid a premium rate which took into account not only the quality of the house but the area in which the house was situated (idyllic views of green fields and woods). The planned development would have a huge impact on property value and with most houses on the street having been newly built or recently purchased (valued according to the location/setting) there is a major concern that many families would face the possibility of negative equity. The current economic climate is already taking its toll on many families; this would further financially impact them.

3373a Upper Green, Tingley/3373c Upper Green Tingley/1336 Upper Green Tingley - Green to Red
SITE ALLOCATION CHANGES —SITE NUMBERS 3373A / 3373C / 1336

We are completely against the development of the above sites for a number of reasons, both personal and in the overall interest of the people living within Greater Morley.

- Access —Suggested access to the new sites through current 'Upper Green' roads would not be viable as road width/layout does not comply with planning requirements for a throughroad.

At present certain areas of the roads cannot accommodate two cars at the same time, more houses mean more traffic. This could lead to huge health and safety issues for motorists and pedestrians alike. Currently traffic on these roads are already at a high especially at peak times and the start and end of the school day (Westerton Primary is directly opposite upper green and is extremely busy at drop off and pick up times).

- Local framework —The local schools (both primary and secondary) are already full and have waiting lists for children already living in the area. Primary schools such as Westerton (already considered a large primary with 100 children per year group) is full with a considerable waiting list, Blackgates Primary has already been expanded to cope with the demand and has no further scope to expand even more. Secondary schools such as Woodkirk and Morley Academy are full with waiting lists. Leeds City Council are aware that there are not enough secondary school places available in this area for children already in the state school system and have granted authority to build a free school in Leeds City Centre (to open 01/09/14). With this in mind perhaps redevelopment of areas surrounding the City Centre or areas within the City Centre should be considered.

- Local Doctors surgeries are already full and continue to take on new patients.

Appointments are non-existent with most people having to go to drop in clinics to sit and wait (sometimes for up to 2 hours). This is hugely problematic for vulnerable patients (small children and the elderly) that sometimes require immediate attention. As for registering with a local NHS dentist— it's virtually impossible!

- Impact on environment. Planning permission stated that when our house was built (2008) the builders had to maintain the few trees between adjoining properties because of impact on the local environment and also to provide screening. Yet the same council with their new plans are happy to see the destruction of acres of protected trees and shrubs (Haigh Woods). This would have a huge impact on wildlife where we have a thriving bird population (which is currently in decline nationally) and a number of protected bats in the area. These birds and bats live/breed and feed in the zones currently highlighted for development. Tingley's green fields are already in decline, brownfield sites should be considered for redevelopment before we destroy our environment further. Planning permission for 20,000 houses have already been granted within the Leeds Area that haven't been built yet, surely these houses should be built and derelict areas redeveloped before we consider destroying green fields and wooded areas.

- The value of current properties will be greatly affected by the addition of housing on the sites stated. Currently Upper Green Drive is one of the most expensive streets for house prices in WF3, houses are built to a high standard and of similar size/value. When we purchased our house in 2008 we paid a premium rate which took into account not only the quality of the house but the area in which the house was situated (idyllic views of green fields and woods). 1336

Lack of amenities – the amenities in the area cannot support the existing population of West Ardsley, never mind accepting an influx of possibly 5000 more.

- Virtually all the shops have closed over the years, there are now only 3 grocery shops in the area. Anyone living at the southern end of Haigh Moor Road has over 1 mile to travel to the nearest shop.

- The schools are overcrowded, Westerton Road has had more external classrooms added, so it cannot be extended. Hill Top School is nearly full now from the existing population growth, again it is extremely limited in expansion possibilities.

- Bus services are pathetic, services to Leeds, Dewsbury and Wakefield are hourly at best. Batley is only accessible from Wakefield –Batley Road. There are areas where buses have been removed completely. This week another service has been stopped.

- There are not any play areas for children, your own survey records this failing.

- There is only one medical centre with 8 doctors giving cover to some existing 15000 patients. To get an appointment with a specific GP can take 3 weeks, the centre has recently been extended to its limits so there is nowhere to go. Also there is only one pharmacist.

Traffic

All the roads in the area are in a bad state of repair, I have lived here for 28 years and Haigh Moor Road has never been resurfaced despite 3 new housing estates accessing it. In June 1992 the planning inspector denied a planning application (91/23/00350) for an annex for an invalid because although neither he nor his brother drove. The reason for this was "I am concerned that were an additional dwelling to be provided there would be no guarantee that it would not lead to additional traffic generation at some future time, perhaps through changed circumstances, with consequent adverse impact on highway safety." Yet here we are with a further 70 houses at Foxfields and Jude's Pond and a proposed 179 on these new sites, probably adding in excess of 500 vehicles to Haigh Moor Road.

There has been a water leak on HMR which despite being reported to Yorkshire Water is still flowing after 3 months and has now become 2 leaks. The western end of Westerton Road is in a dangerous state with potholes and speed restriction bumps. LCC appears to be unable to keep up with the maintenance of its roads in South Leeds.

LCC's attitude to this area seems to be that Ardsley is an outpost on the borders with Wakefield and Kirklees and beyond the borough or Morley, so we can be conveniently ignored. Ardsley is quite definitely being asked to provide the lion's share of new housing without any benefit, it has poor services and has become a dormitory area of Leeds.

1100 / 1044 / 1336 -

I am amazed that you are proposing to have a major build on the Garforth green belt (ref: Wakefield Road / Barrowby Lane and Selby Road plus Barwick Road. You cannot be aware the problems this will cause to Garforth.

1. Even now the traffic bottlenecks at peak times on:-
 - a. A642 and Garforth Main Street
 - b. Selby road A63 leading up to the Old George public house and roundabout and up to the traffic lights at the Lidgett Lane junction.
2. Our services will be overloaded – such as school places, health care plus the ever present problem of parking when shopping in Garforth.
3. Apparently, there is no need for a local travellers site which we wholeheartedly agree with. The Cottingley Springs site in Leeds should offer sufficient provision.
4. We seem to have been the dumping ground for extended building including the industrial site at East Garforth plus the re-routing of the M1 which skirts three sides of Garforth. One of the original routes was between Scholes and Barwick which was the logical route to avoid traffic through Cross gates. Now to rectify this bad error another bypass is to be built (crossing Swillington Common) to ease the Crossgates congestion.
5. Garforth is already a large built up area. It is essential that a green belt corridor is kept between the East of Leeds and Garforth.
6. Already there can be major flooding particularly at the Old George roundabout what do you intend to do about this taking account that the drainage of the land bordering Wakefield Road will be seriously impeded by extensive building?
7. A development of a new settlement on the land off Ridge Road (which is known as Makins farmland) and close to the Peckfield roundabout (site ref: 1232) would allow a green belt corridor between Garforth and the new development.
8. What Garforth really needs is a natural parkland and the agricultural land bordering the Wakefield Road is ideal, currently we only have playing field areas – no specific park, and we were amazed when part of Gletelands was taken to extend the burial site.

2032/2091/1004

1232

Please note the following comments apply to all site proposals and my objectives against all of them. I have many concerns over the planned proposals, which some are going to have adverse affects on Garforth, which is already under pressure with traffic congestion - back to school places, dental places and doctor practices.

Traffic congestion is already a big problem it can take me 10-15 mins to get out of Garforth in a morning to do just a 10 mile journey to work.

I was born and grew up in Garforth and the dramatic changes already affecting Garforth are difficult to live with without the added difficulties you will be imposing with the proposed plans. This cannot be productive for the residents of Garforth or appealing for anyone wanting to move to Garforth.

I am currently 16 weeks pregnant (my first) and have many concerns and worries about the possibilities of not been able to provide a local education and health care for my child. I would not be able to afford costs to go elsewhere for this.

Garforth is already known for flooding and what implications will all the building have in this?? And the wildlife will *empty* in Garforth - please don't eliminate this.

Why are you not supporting the current residents? Why build more houses when the housing market in Garforth are not selling anyway.

The natural boundary of the village needs to remain intact. Please please reconsider these proposals and consider a new settlement on the land off Ridge Road - Site 1232. Please listen to the residents of Garforth and support us.

Name: James Pow

Representor No: PRS01505

Representation ID: REP03644 Question Ref: H1

1336 GREEN TO RED, We oppose the development of the above sites for the following reasons;

1. The current roads on the upper Green estate will not be able to cope with an increase in traffic. In particular, the junction of the upper green way and upper green drive is already very dangerous. Cars tend to have to use the middle of the road to get around the corner and people who live on the immediate estate are aware they have to slow down and be mindful of oncoming cars and children playing in the proximity. An increase in traffic is highly likely to cause a serious accident on this bend. The junction of Westerton Road and upper green way already come to a complete standstill at the start and end of the school day.
2. Primary schools and high schools in the area oversubscribed and have waiting lists. Westerton primary school is the nearest school to the proposed development and is the largest primary school in Leeds.
3. The fields on the proposed development are currently used to grow crops for food. The woodland area is used by the local people for recreation.
4. The destruction of protected trees and shrubs would have a negative effect on wildlife.
5. The local healthcare facilities are currently at full capacity.
6. There is little employment within walking distance from the proposed development.

We consider that additional housing should not be built on greenbelt land. Instead brownfield sites should be used where wildlife, agricultural land and woodland would not be affected and the infrastructure would be more suitable.

1336 / 1258 / 1032 / 3365 / 1143B / 1143D I am making my response by letter; the online boxes rejected my comments because they exceed 3,000 digits.

3373A Haigh Wood, West Ardsley, 3373C Haigh Wood, West Ardsley,
1336 Westerton Road, West Ardsley, 3456A Ardsley Reservoir,
1258 Westerton Road, Tingley, 3365 Westerton Road, Tingley,
1032 Bradford Road, 1143B & 1143D Thorpe Lane, Tingley.
Ob ections.

The Core Strategy seeks to be "fair". The word is used in paragraph 1.2 and again in 1.14. Yet the proposed green housing sites when taken together would definitely not be fair to West Ardsley and Tingley. No justification has been given as to why there is such a concentration here, nor any evidence of local need. Indeed, paragraph 4.6.14 states that "The SHMA 2011 was not able to identify any geographically specific need for new housing based on population growth." The 13 green housing sites in Ardsley and Tingley seem to have been assessed individually rather than their cumulative impact. This impact is potentially very much greater when considered alongside Kirklees Council's proposals for the Chidswell area, and comes on top of the huge impact on West Ardsley of major housing development in the 1990s - the estates now accessed by Lowry Road and Constable Road. The newly proposed sites taken together would consolidate semi-rural groups of settlements into a predominantly urban residential area. Most of the open frontages to Bradford Road and Westerton Road would be built on, removing open aspects and distant views and tending towards the creation of amorphous sprawl of development across the area along the length of the A650.

1100 / 1044 / 1336 -

I have lived in Garforth all my life and seen it grow into a sizeable town, much bigger than its original intention. I have also witnessed the increased traffic and congestion, demand and refusal of school places – particularly at primary level, the waiting lists and times of doctors and dentists and feel increasing the number of houses by another 4500 is unacceptable to local resources.

Name: Sally Hansell

Representor No: PRS02133

Representation ID: REP04356 Question Ref: H1

1100 / 1044 / 1336

I would like to submit my objections to the proposed plans to build near Wakefield Road / Barrowby Lane in Garforth, Barwick Road and Selby Road. It is unimaginable to me that LCC would consider such a large plan to build on the green belt. LCC is more than aware of the huge flooding risks we face in Garforth – I can only assume that those who wish to pass this plan have never been flooded in their homes? It is not just a disruption to living arrangements, or a question of 'drying out' what has been damaged – this is a physical and emotional challenge to all of us affected. It is something that causes worry and concern every time bad weather is forecast. To add so many more homes to the already compromised drainage system shows a complete disrespect to your current residents and it is shameful on LCC to propose plans that are a given in regards to creating more flood risk areas and increased damage to those properties already affected by flooding. It will also be a massive impact on our surrounding countryside – this is what makes Garforth the stand alone town it is. Do you really want to join us on to an already sprawling city? Has LCC no regard for history, for the countryside or for individuality? Please re think your proposed plans.

Representation ID: REP05128 Question Ref: H1

Selby Road 1336/2132
Borders around Garforth would vanish and impact on wildlife and plants etc. Impact on school requirements, doctors, dentists, would be too high for this area to sustain demand for public services, Policing, Fire Services would increase to sky high levels. Some areas it is not known what lies underneath, where old coalmine workings are, swampy ground.

Name: Cyril Raymond Toft

Representor No: PRS02680

Representation ID: REP05132 Question Ref: H1

2 Selby Road 1336/2132
As I am sure many people will have pointed out about flooding at Garforth Bridge. What impact will another 4,000 plus buildings have on the flooding? If this goes ahead, where will all the cars etc park in Garforth when they try to get to shops or doctors and dentists etc. On that site what has been proposed there are many wild plants and birds that are almost extinct.

Name: Joan Waring

Representor No: PRS02759

Representation ID: REP05292 Question Ref: H1

The optional site would be more acceptable. Natural boundary should be retained or we will lose our identity which is so important to a happy community. A lovely park and a lake where children could play and with rowing boats and a sports facility, we have absolutely nothing here, no wonder the youth go to pubs and drink, what else is there

Name: Lynn Langley

Traffic levels at peak times are already very heavy, this will cause many more problems on a very busy road.

Name: Annie McNally

Representor No: PRS03059

Representation ID: REP00387 Question Ref: G1

I think it is disgusting that the council are wanting to build on greenbelt land on proposed Plots 1336, 3373, 3372, 3373A, 3373B, 3373C, 1330B, 1330A, 536. And 3456A. It is an area of outstanding beauty where people enjoy walking, running, playing and riding horses. Many wild animals live in the fields and to take it away would turn this area into a concrete jungle. It would mean my view at the back would be eradicated, lowering the value of my house, but more importantly the pleasure I have everyday when I look across the field. This city needs green areas where we can walk and get away from the stresses of life. Also, to the rear of my property there is bindweed in the field which I believe would make it difficult for any developers to be able to build on that land. There are plenty of brown field sites which can be developed. Do not take away our green spaces. Totally outrageous.

Representation ID: REP00155 Question Ref: H2

3373A: suggested access via narrow, badly designed estate roads which are about adequate to service the existing housing. The site, in parts, is probably not economical to develop (topography, drainage, old mines etc). Will entail removal of many trees which form part of a pleasant, wooded local amenity. If developed, the character of this space (a quiet valley) will be ruined. Applying to 3373A and also 3373C, 1336 and 1337: Local roads already saturated, no places in schools or GPs, massive development will ruin the 'village' feel of the area.

Site Comments - Outer South West

Housing

Westerton Road (land at), West Ardsley

Name: Richard Sagar

Representor No: PRS03405

Representation ID: REP01941 Question Ref: H1

Whilst we are in broad agreement with the designation of green sites at Haigh Wood in the Outer South West area of Leeds, we have concerns regarding the boundaries between the 'green' and 'red' sites. We agree with and support the allocation of land at Haigh Wood for housing with a central area in the vicinity of Haigh Wood LNA left undisturbed, but feel that this primary objective can be better achieved with different boundaries to sites 3373A, 3373B, 3373C and 1336

Representation ID: REP01941 Question Ref: H3

As a corollary to the explanation provided at H2 and in the attached document, we suggest that parts of site 3373B be re-designated as green, in accordance with Figure 6 and Appendix 1 of that document. These sections are in areas which are not needed to be kept undeveloped for the preservation of the green corridor between the two development parcels. New access points, via Upper Green Avenue/Upper Green Way and a new junction onto Westerton Road will facilitate improved integration into the transport network. As mentioned above, the alignment of site 3373B would be more logical if it followed the suggested revised indicative masterplan included in the attached document (at Figure 6 and Appendix 1). The green corridor will be further protected by the removal of the previously suggested vehicular link road between the two parts of the Haigh Wood site. The new alignment will preserve the vast majority of the hedges and existing trees on the site, whilst allowing a more logical and achievable layout for future development. Additionally, no development is proposed within the vicinity of the LNA or the stream running down the valley.

Representation ID: REP01941 Question Ref: H8

As explained at H3 and in the attached documents, we believe that sections of site 3337B should be re-designated as green, instead of parts of site 1336 and 3373A.

Representation ID: REP01941 Question Ref: H9

As explained at H2 and in the attached documents, we suggest that parts of sites 1336 and 3373A would be more suitable for colour coding as red, whilst parts of site 3373B should be green.

Representation ID: REP01941 Question Ref: H11

The suggested revised allocations at Haigh Wood (see Figure 6 and Appendix 1 of the attached document) ('green' land) are all suitable for short term delivery.

Representation ID: REP01941 Question Ref: H2

We agree with the Council that the central valley at Haigh Wood should be excluded from development, as a green corridor between proposed development sites. This was the Council's intention in designating site 3373B as red. However, the alignment of the valley suggested by site 3373B does not accurately reflect the topography of the area, the trees, the stream and the LNA and how these will affect potential development, nor does it align with what we suggest is the true extent of the central valley. We therefore suggest that sections of sites 3373A and 1336 be re-designated as red, in accordance with the attached documents (Document for Residential and Open Space Allocation Addendum dated July 2013, in particular Figure 6 and Appendix 1, and the covering letter) outlining the detailed justification for our proposed new alignment for the central valley. The sections of sites 3373A and 1336 which we suggest are re-designated as red are not suitable for development, as they incorporate important arboricultural features which will be difficult to incorporate into a housing development and are best left as part of the green corridor between the two development parcels. Conversely, parts of site 3373B should be added as green, not red, for similar reasons, but in reverse; the area can be developed without harm to what is sought to be protected, as further explained below.

Leeds LDF site 3373A. Objections.1.Character of area. Development on the scale envisaged, particularly when combined with other development sites, does not "respect the character and objectives of local communities"1670 proposed dwellings in the green sites in Tingley & Ardsley would seriously threaten the semi rural nature of the area .2.Damage to Haigh Wood .Site includes part of a Tree Preservation Order area. Development of this area will Impact on the pretty secluded valley. There will be a threat to a wide variety of wild life present in the valley.3.Inadequacy of access roads. Roads linked to the proposed development site are not suitable to take the expected increase in traffic .This could lead to a threat to children's safety especially when children are going to & coming home from the nearby Westerton Primary school when the area already gets very congested.4. School capacities. The local primary and secondary schools (Westerton ,Hill Top , Blackgates and Woodkirk Academy are already over subscribed and do not have the potential to be extended further.5. Other community facilities. Doctors ,Dentists ,health centres & leisure facilities in the area would be overstretched. 6. Building costs. Parts of 3373A have serious levels problems and look undevelopable. There was extensive mining in the area in the past & old bell pits have already been discovered which need to be dealt with.7.Lee Fair fields would be built on.This historic fair would need to be relocated and an alternative site would be needed. 8. AgricultureGood quality farmland growing a variety of crops will be lost. Site 1336.objectionsThe above objections excluding points 2 and 7

I disagree with all the proposalsSite3112/3111/1100/1044/3113Site 1336/2132Site3114/1165/2156Site 2032/2091/1004Most of the above sites are situated in what are now farmed fields, which add character to the area, and are a major factor in attracting residents to the area. If these green spaces are eroded by development, the present schools will be insufficient, also other necessary services will struggle to maintain the high quality that we have at present. The proposed site between Barrowby Lane and Wakefield Road is not at present on mains sewerage (indeed many properties which already exist on Barrowby lane are not serviced by sewers), and as things stand the area easily floods, if the proposal goes forward this will surely make matters worse, as the surrounding land at present does retain some of the moisture. Another major factor to be considered is the increased traffic in the area, at present we have good rail and bus links into the city, however car parking at the station is already limiting to the number of commuters from the area, and the road network into the city struggles at peak periods. I understand that the present Traveller site at Cottingley Springs can be extended, this is obviously a better solution than creating another site on Wakefield Road, it would enable the families to stay together rather than separating them. In conclusion, I am totally against these proposals, and would like the council to reconsider their plans.

3112/3111/1100/1044/3113 Wakefield Road: This is a busy road and introducing the 3500 houses onto this road will significantly grid lock Garforth at peak times. The additional housing will increase flooding which is already experienced at the roundabout on Selby road. The provision of school places and the Medical centres will be over subscribed, which they already are. Impact on wildlife.3114/1165/2156 Barwick Road: this is a small road with railway bridge and will increase traffic right on the top of Garforth Main Street. The provision of school places and the healthcare centres will be over subscribed, which they already are. Impact on wildlife.1336/2132 Selby Road: This is some distance out of Garforth itself and will need its own amenities and public services. Adequate surface water provision will need to be adopted to prevent flooding further down the hill in Garforth. Would a suitable footpath be built to access Garforth from this site. Impact on wildlife. This development may increase further developments in the future to close the gap to garforth.

Housing

Westerton Road (land at), West Ardsley

Name: Samantha Halls

Representor No: PRS04583

Representation ID: REP00646 Question Ref: H1

1. Local character and identity Development of site would be contrary to the following sections of the Council's policy SP1 in the Core Strategy: - Site 3373A, with its estimated capacity of 130 dwellings, does not have regard to the size, function and sustainability of West Ardsley. SP1 (iii) states: "For development to respect and enhance the local character and identity of places and neighbourhoods". The local character and identity of West Ardsley would be seriously threatened by 3373A, especially when combined with sites 3373C and 1336, and would make its component areas of Upper Green, Haigh Moor and Hill Top barely distinguishable from each other. My view accords with three decision letters from the Planning Inspectorate which were used in the Council's own evidence to the Unitary Development Plan public inquiry in 1995. In paragraph 39 of his report on Morley Local Plan, the inspector considered the planned development at Haigh Wood (site WA2H) would have a "very serious impact upon the character and environment of West Ardsley". He concluded paragraph 10: "In the past, development in the Morley area would appear to have been sporadic and opportunist, placing smaller settlements at risk and tending towards the creation of amorphous sprawl of development across the area along the length of the A650 Bradford to Wakefield road. In my view, the further diffusion of the existing loosely-knit settlement pattern should, as far as possible, be resisted." Considering appeals in 1986 on 81/23/00212 and 81/23/00213 (broadly the same area as LDF sites 3373A/B/C and 1336) the inspector said "It would virtually eliminate the open centre and consolidate the semi-rural group of settlements into a predominantly urban residential area". This was endorsed in the Secretary of State's decision letter. In 1994, a third inspector dismissed an appeal to develop land at Arthington Close near the edge of Haigh Wood because it would "unacceptably erode the fringe of this rural area and lead to pressure for further encroachment of residential development, particularly in the fields to the west...". Although some years ago these decisions, the character and environment of the area are still semi-rural and just as delicate. When cogent arguments have been repeatedly made against development of the 3373 areas by the Secretary of State, by three planning inspectors and by Leeds Council itself (in evidence to the UDP inquiry), there can be no justification for sites 3373A, 3373C and 1336 being pursued for residential development in the LDF. They should instead be reclassified as "red" and withdrawn from consideration for development when producing the next stage of the plan. 2. Damage to Haigh Wood and Baghill beck valley - Development of this site would be contrary to the Council's policy P12 in the Core Strategy:

Representation ID: REP00646 Question Ref: H2

I DISAGREE WITH SITES 3373A, 3373C and 1336 3. Fairness The Core Strategy seeks to be "fair". The word is used in paragraph 1.2 and again in 1.14. Yet the proposed green housing sites when taken together would definitely not be fair to West Ardsley and Tingley. No justification has been given as to why there is such a concentration here, nor any evidence of local need. Indeed, paragraph 4.6.14 states that "The SHMA 2011 was not able to identify any geographically specific need for new housing based on population growth." The sites seem to have been assessed individually rather than their cumulative impact. This impact is potentially greater when considered alongside Kirklees proposals for Chidswell 4. Highway access - The Upper Green culs-de-sac are not suitable to serve up to 130 more houses. They would become much less safe for children to play in and already severe dangers at school times would be exacerbated. 5. Schools - already full and difficult to expand further. 6. Agricultural - land good quality agricultural land would be lost. 7. Viability - costs from: a. parts of 3373A have serious levels problems and look undevelopable; b. bell pits known to exist in the area from former mining; c. elimination of Japanese Knotweed.

Representation ID: REP01250 Question Ref: H2

Site ref 1336/2132 Selby Road My house borders Selby Road near to Ninelands Lane. Very heavy traffic including many HGV's pass along Selby Road past my house heading for the A1 and for access into Garforth via Ninelands Lane. Some years ago a new road was planned to by pass the length of Selby Road from the junction of Selby Road/ Wakefield Road to the Micklefield roundabout. It was deemed essential in view of the heavy traffic passing alongside a residential area and plans were available to view at a local hotel. The new road was to run more or less parallel to Selby Road but about half a mile south of Selby Road. It did not come to fruition due to financial restraints at that time, not because of any objections. Building more houses in this area will increase already intolerable traffic levels in an area already identified as suffering from traffic problems with an increase of noise/ dirt/pollution levels for all residents in this area. What was accepted those years ago should stand today, not exacerbating the situation!!

Site 3373A objection. The local character and identity of West Ardsley would be seriously threatened by 3373A, especially when combined with sites 3373C and 1336, and would make its component areas of Upper Green, Haigh Moor and Hill Top barely distinguishable from each other. My view accords with three decision letters from the Planning Inspectorate which were used in the Council's own evidence to the Unitary Development Plan public inquiry in 1995. In paragraph 39 of his report on the Morley Local Plan, the inspector considered that the planned development at Haigh Wood (site WA2H) would have a "very serious impact upon the character and environment of West Ardsley". "In the past, development in the Morley area would appear to have been sporadic and opportunist, placing the identity of the smaller settlements at risk and tending towards the creation of amorphous sprawl of development across the area along the length of the A650 Bradford to Wakefield road. In my view, the further diffusion of the existing loosely-knit settlement pattern should, as far as possible, be resisted." In 1994, another inspector dismissed an appeal to develop land at Arthington Close near the edge of Haigh Wood because it would "unacceptably erode the fringe of this rural area and would lead to pressure for further encroachment of residential development, most particularly in the fields to the west...".

Name: Emma Winter

Representor No: PRS04943

Representation ID: REP05578 Question Ref: H4

I strongly object to all the above developments proposed in Garforth for the following reasons

1. Increased risk of flooding in area's that already flood due to inadequate sewage and surface drainage facilities
2. Hugely increased traffic congestion in general as well as grid lock at peak times at such areas as Garforth Bridge, Townend, Lidgett Lane/Selby Road junction
3. Breaking the natural boundary of the village leaving it setting a precedent for more over development of Green Belt land by greedy developers
4. Demand for school places for Primary and Academy places would be way beyond capacity without any new development to this infrastructure
5. Excessive increase and high demand on doctors, dentists, police, fire, without increase in services
6. No requirement for a travellers site, as extension to Cottingley Springs provides sufficient needs!
7. Horrendous impact on habitat of natural wildlife that will be irreversible

Further to these points of objection, I understand and appreciate that some land has to be allocated for development. Therefore I would suggest that the land ref site 1232 will accommodate things in a better way.

1. Access can be from Ridge Road giving access to A63. A642 and A1/M1 link road without going through the heart of our village causing chaos.
2. No flooding impact as new infrastructure would need to be developed.
3. Space to accommodate green areas within development
4. Extra provision of dentists, doctors etc could also be provided in this area

Ultimately I would prefer the continual over development of the Garforth area are not to happen at all and from experience I doubt this will happen as planners do not appear to consider local opinions. However I would prefer this alternative compromise to be the way forward if development is forced in the area!

Representation ID: REP05601 Question Ref: H4

Traffic chaos on Selby Road site near school academy, not enough school places at present for the demand. Without DOUBLING DEMAND 3 more academies would be needed.

There has been more than 5 large housing development sites in Garforth in the last 6 years, We just can't keep building without thinking.

Housing

Westerton Road (land at), West Ardsley

Name: Samantha Halls

Representor No: PRS05085

Representation ID: REP05653 Question Ref: H1

Site 3373A. Objections

1. Local character and identity

Development of this site would be contrary to the following sections of the Council's policy SP1 in the Core Strategy:

1. SP1 (i) states: "Smaller Settlements will contribute to development needs, with the scale of growth having regard to the settlement's size, function and sustainability."

Site 3373A, with its estimated capacity of 130 dwellings, does not have regard to the size, function and sustainability of West Ardsley.

SP1 (iii) states: "For development to respect and enhance the local character and identity of places and neighbourhoods". The local character and identity of West Ardsley would be seriously threatened by 3373A, especially when combined with sites 3373C and 1336, and would make its component areas of Upper Green, Haigh Moor and Hill Top barely distinguishable from each other.

My view accords with three decision letters from the Planning Inspectorate which were used in the Council's own evidence to the Unitary Development Plan public inquiry in 1995. In paragraph 39 of his report on the Morley Local Plan, the inspector considered that the planned development at Haigh Wood (site WA2H) would have a "very serious impact upon the character and environment of West Ardsley". He concluded in paragraph 10: "In the past, development in the Morley area would appear to have been sporadic and opportunist, placing the identity of the smaller settlements at risk and tending towards the creation of amorphous sprawl of development across the area along the length of the A650 Bradford to Wakefield road. In my view, the further diffusion of the existing loosely-knit settlement pattern should, as far as possible, be resisted." Considering appeals in 1986 on 81/23/00212 and 81/23/00213 (broadly the same area as LDF sites 3373A/B/C and 1336) the inspector said "It would virtually eliminate the open centre and consolidate the semi-rural group of settlements into a predominantly urban residential area". This was endorsed in the Secretary of State's decision letter.

In 1994, a third inspector dismissed an appeal to develop land at Arthington Close near the the edge of Haigh Wood because it would "unacceptably erode the fringe of this rural area and would lead to pressure for further encroachment of residential development, most particularly in the fields to the west..."

Although some years have passed since these decisions, the character and environment of the area are still semi-rural and just as delicate. When cogent arguments have been repeatedly made against development of the 3373 areas by the Secretary of State, by three planning inspectors and by Leeds Council itself (in evidence to the UDP inquiry), there can be no justification for sites 3373A, 3373C and 1336 being pursued for residential development in the LDF. They should instead be reclassified as "red" and withdrawn from consideration for development when producing the next stage of the plan.

2. Damage to Haigh Wood and Baghill beck valley

Development of this site would be contrary to the Council's policy P12 in the Core Strategy:

"The character, quality and biodiversity of Leeds' townscapes and landscapes, including their historical and cultural significance, will be conserved and enhanced to protect their distinctiveness through stewardship and the planning process." The secluded Haigh Wood valley comprises the central portion of site 3373A, including part of the wood covered by a Tree Preservation Order. Residential development would prejudice the objectives underlining this policy as set out in paragraphs 5.3.46 to 5.3.48 of the Core Strategy including: "The Council seeks to protect and enhance the varied landscapes of Leeds and the assets they contain, from valued local trees, the countryside to nationally designated landscape, fauna and flora".

This view was endorsed by three planning inspectors and again in the Council's evidence, given by Mr G B Andrews, at the UDP inquiry. In his paragraph 4.3.6, Mr Andrews stated: I refer to the conclusions reached by the inspectors at the two subsequent appeal cases in 1985 and 1994. In each case it is acknowledged that the Haigh Wood area is of value as an area of attractive open farmland with a rural character and provides an important amenity in the local area". Even the Council's own assessment for the LDF states that the site is: "Not supported (RED). This site includes Haigh Wood and Baghill Beck Local Nature Area which fall under UK Biological Action Plan priority habitats - a mixture of woodland, scrub and grassland habitats alongside Baghill Beck. There are a number of wide hedgerow/woodland belts throughout the site that provide a valuable habitat. Water vole has been recorded on the Hey Beck. The Baghill Beck flows into this water course and could support this species. Bats to consider."

3. Fairness

The Core Strategy seeks to be "fair". The word is used in paragraph 1.2 and again in 1.14. Yet the proposed green housing sites when taken together would definitely not be fair to West Ardsley and Tingley. No justification has been given as to why there is such a concentration here, nor any evidence of local need. Indeed, paragraph 4.6.14 states that "The SHMA 2011 was not able to identify any geographically specific need for new housing based on population growth." The sites seem to have been assessed individually rather than their cumulative impact. This impact is potentially very much greater when considered alongside Kirklees Council's proposals for the Chidswell area.

4. Highway access

The Upper Green culs-de-sac are not suitable to serve up to 130 more houses. They would become much less safe for children to play in and the already severe dangers at school times would be exacerbated.

5. Schools

Primary and secondary schools already full and difficult to expand further.

6. Agricultural land

Good quality agricultural land would be lost.

7. Viability

Extra costs from: a. parts of 3373A have serious levels problems and look undevelopable; b. bell pits known to exist in the area from former mining; c. elimination of Japanese Knotweed.

Hi,

I would like to object against the planning proposals for the following sites on Map 33 (off Westerton Road)

1336

3373B

3373A

1330B

33732

3365

3373C

3456A

3456B

1258

I suggest that these should all be changed to RED due to the following reasons:

Too much traffic already so roads will be extremely busy right outside my front door. I have young children and will be scared for their safety.

Services such as Doctors surgery's, dentists, local hospitals, schools, supermarkets already too busy so won't be able to cope

Less water will be absorbed into the ground resulting in more flooding in our gardens.

This is currently already happening in several houses on Westerton Road including mine.

There are bats, foxes, owls, frogs, newts and many birds living in the area especially on sites 1336, 3373A, 3373B, 3373C. Should these not be protected?

House prices for homeowners in the area already will decrease.

We moved to the area because of the greenery and our view will be spoilt.

The sewerage system in place on Westerton Road recently failed causing waste from the sewers to overflow into nearby houses. This was due to the recent housing developments that have recently been built nearby so the sewerage system was unable to cope. This could very likely happen again.

The infrastructure in this area will struggle to cope with the demands of the services required.

The area is attracting wildlife not seen in built up areas. It seems a shame to disregard the wildlife issue I'm sure if a full environmental survey of the area was to be carried out this would scupper the planning permission. But again that would be an extra cost to the council which would have an impact at year end when the books are balanced.

1336 – Suggested Change GREEN to RED

Reason for change - Adding traffic problems on Westerton Road, cars blocking access to roads already when parked up at school times. Residents are unable to go about their business in not having access to their properties because of parked cars.

Other remarks - What are the councils forward plans if any for improving this problem i.e. solving rather than adding to it? School would appear to be overcrowded now with lack of access to GP practises. Very surprising that any accident as not occurred at school times already. 1336 –

Representation ID: REP06573 Question Ref: H1

I write to express my concerns and objections to the proposed development of the above.

Garforth is already heavily populated with increased traffic on the existing local streets, roads and has increasing congestion on the main roads serving Garforth. Most properties seem to own or on average own and park 2 or more cars causing problems with parking as well as congestion with regard to traffic flow.

There are issues with regard to congestion/grid lock, drainage and flooding, particularly at the Old George Roundabout (Miller and Carter Restaurant by the Holiday Inn) and at the junction of Wakefield Road/(top)Main Street. The traffic light system would need revision at the Wakefield Road/(top) Main Street junction to effectively manage the increased traffic flow at the junction of 4 busy arterial roads.

Smaller, less busy streets would become cut-through routes to avoid congested routes which would put the public, children and vulnerable adults at risk of injury through an increase in road traffic accidents. Funds need to be allocated and used to provide appropriate safe recreational indoor and outdoor facilities in Garforth to encourage young people of all ages to be fit and active.

Access to the shopping facilities on Garforth Main Street is interrupted by the volume of traffic parked road side around Main Street, particularly on Barleyhill Road and Church Lane, deeming the roads accessible by single file traffic only. There is insufficient parking available in Garforth for the proposed development given that in reality most people use their vehicles for park and ride at the railway stations and when shopping/attending appointments/school&education/childcare facilities.

It is valuable to the community of Garforth to maintain and encourage the wildlife, plants, vegetation and insects in the green areas of the town. We need to protect the important effect that nature plays in their growth and in our gardens, and to preserve their natural habitats.

The proposed development will further put strain on the local shops, schools, nurseries, child care facilities, transport (bus/train services) and medical (doctors surgeries/medical centres) and fire/police services who already seem to work to capacity.

.

Housing

Westerton Road (land at), West Ardsley

Name: Helen Falkingham

Representor No: PRS06065

Representation ID: REP06913 Question Ref: H1

I am writing in my capacity as a resident of Garforth to put my objections to the building on the Greenfield site to west of Wakefield Road in Garforth (coded 1100, 1044, 3113, 3111, and 3112)

Wakefield Road acts as a natural boundary to Garforth, so no houses should be built on that side of the road. If they are, it may set a precedent for further building, and eventually we will be linked to Crossgates and therefore Leeds itself.

Wakefield Road, and it's junctions at Town End and Garforth Bridge are already congested, and additional traffic created from this development could easily lead to total gridlock at any time of the day.

The infrastructure of drainage at that side of Garforth is already fairly fragile, the land, and the houses on the other side of Wakefield Road are already prone to flooding so adding more houses, and concrete driveways will remove drain away, leading to more flood threats. Garforth Bridge, a major route in and out of Garforth has been closed in the past by flooding and this may occur more often if there is no land for water to soak into. The number of families with children moving into the area will impact on the schools, which are near to capacity already, and this would also contribute to traffic congestion when they are shipped out to other areas for school. There would also be increased demand on other services within Garforth, such as doctors and dentists and put increased pressure on policing and fire services, which have been cut back to bare minimums.

Other areas pinpointed for development such as the south side of Selby road (coded 1336 and 3132) are also not suitable for development as they will cause severe congestion on Selby Road, which already backs up to Ninelands Lane on weekdays. Also the road is not safe for traffic exiting onto Selby Road, and adding further junctions will just make things worse.

Another site proposed is behind Town End (coded 3114, 1165, and 2156). This is not suitable as it can only be accessed under a narrow railway bridge, which is already a nightmare to negotiate. The increased volume of traffic that would arise because of this development would totally block this area and add to the already very congested Town End junction. The only other exit from Garforth would be along a country road and through Barwick in Elmet and Scholes.

I am not sure that the development coded 1232, 1244, and 3110 should go ahead. This would be such a big development as to almost double the size of Garforth, and is large enough to be a community in its own right. This would require schools, health services, policing and other services to be provided. Should such a community be built so close to an existing one that it becomes part of the existing community? At the moment this area is used for farming, so what happens to the food production when this goes? I do accept however that building on this site will solve some of the traffic headaches that are a major concern with other developments in Garforth itself.

I cannot understand why it is necessary to build houses on land which has never been used for building before when there are places in Leeds which have been, and look such eye sores, where buildings have been demolished and the land left to 'rot'. I believe these areas and areas where houses have been abandoned and boarded up should be redeveloped first, before using farmland and countryside habitat.

Housing

Westerton Road (land at), West Ardsley

Name: West Ardsley Consortium

Representor No: PRS06168

Representation ID: REP07292 Question Ref: H7

Dear Madam

Allocations Issues and Options Document - Sites 536 (Nook Farm) , 1330 B (Adjacent to Judes Pond), 1336 (Westerton Road, and 3373 A, B and C (Haigh Wood)

We act on behalf of the West Ardsley Consortium that has made formal comments to the Leeds Site Allocations Issues and Options documents. We enclose a copy of the Document submitted with the formal response for your information.

Our clients are interested in sites 536 (Nook Farm) , 1330 B (Adjacent to Judes Pond), 1336 (Westerton Road, and 3373 A, B and C (Haigh Wood) and have previously made representations for the sites to be allocated, along with a substantial area of ecologically maintained open space centred around the Haigh Wood area.

Having seen the draft proposals our clients are supportive in principle of the Councils approach to identifying a large portion of the land promoted by them for residential development. The areas identified as "Green" (for development) in the Issues and Options document at Haigh Wood amount to 16.83 Ha of land with a suggested dwelling capacity of over 400 units (at a reasonably low 25/Ha). The areas identified as "Red" (felt to be not suitable for development) amount to 17.5 Ha. This sets an approach of slightly over half the land being protected from development.

We note that the site known as Nook Farm (536) is an existing UDPR commitment and has no policy designation that has or would suggest anything other than its suitability for residential development. That site also has (contrary to the suggestion in the Issues and Options document) an extant planning permission. The details of this are set out in our formal representations.

Having reviewed the indicative boundaries suggested between the "Green" and "Red" sites in the Issues and Options document and undertaken a detailed assessment against trees, topography, the LNA of Haigh Wood and the stream running through it, whilst acknowledging the need for an uninterrupted green corridor separating the north west and south east areas of land, our clients are firmly of the view that the Councils preliminary work does not produce appropriate boundaries between development allocations and non development allocations. For example as figure 3 in the attached document shows land is identified by the Council for development in site 3373A that includes part of the LNA, the trees of Haigh Wood and the stream running through it, whilst seeking to protect from development land to the south east which has none of those considerations applying to it.

Utilising the work already done on ecology, trees and hedges, landscape and topography, our Clients have carefully considered the Councils objectives and aspirations from the comments in the tables and pro formas associated with the Issues and Options document. They have produced a revised masterplan and from that been able to identify appropriate development and allocation boundaries. These maintain a broad green corridor through the valley, protecting ecological interests, trees and the stream as well as views and the "open feel" of the valley itself. In particular this has not only widened the broad swathe of green between the development areas, compared to the earlier 2012 masterplan, but removed any road connections across the valley.

The resultant masterplan has been informed by all the Consortium team's professional disciplines and the changed highways connections fully evaluated to ensure they work appropriately.

The outcome is that of the area in the UDPR that is identified as NI 1 (some 36.14 Ha) only 40% is now proposed for development. The suggested allocations (boundaries shown in red on Figure 6 of the attached document include (so that the allocations are not excessively subdivided) substantial green corridors and strategic planting, amounting to some 3.24Ha. These run along the existing and proposed pedestrian and bridleway access corridors to the valley and the Wood. The suggested total area of the allocations (including the 3.24 Ha of undeveloped green space) is under half of the current NI1 land at 17.66 Ha. We believe this provides the right balance of development and protection of the wider site.

We note that the areas identified as "Green" in the Issues and Options document in this Outer South West area are insufficient by some margin (1,432) to meet the Core Strategy suggested proportion of housing for the area, even taking into account (and not questioning) the amount of development to come forward from permissions and existing allocations. There should be no doubt that all "Green" sites should therefore go forward for allocation. Indeed more will need to be found from "Amber" or even "Red" sites to provide sufficient land. In addition, there are proportionately far fewer "Green" sites (compared to "Amber") in East and West Ardsley than there are in Morley or the rest of the Outer South West.

The site at Haigh Wood with its non greenbelt status and accessibility and sustainability credentials provides a very good location for development and the provision of material environmental benefits through protection, increased access and environmental management of the Wood itself. As there have to be exceptional circumstances to take land out of the greenbelt, there must correspondingly be exceptional circumstances not to develop at Haigh Wood ahead of greenbelt land.

For all of these reasons our clients, look forward to working with the Council to bring forward development in line with the attached revised masterplan, which we believe fully addresses all comments made in the Issues and Options document and the related proformas about the land at Haigh Wood.

Yours faithfully

[x]

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Green Sites outside the Core Public Transport Network

Table 1 below contains sites that are classified as 'Sites which have potential to be allocated for housing' but fall outside 400m of the current core bus network. Consideration needs to be given to if these sites would be able to meet the LDF public transport accessibility requirements should housing be brought forward. Significant developer contributions will be required at these sites to improve the public transport to meet the council LDF accessibility policies; particularly in the larger sites should these be brought forward for development. These include SHLAA ref: 2062, 1032, 1046, 1017 & 1055.

Sites which fall marginally outside the 400m catchments and have high bus frequencies or are small sites low capacity are less of concern but are flagged up nonetheless.

The table also includes accessibility assessments results to access other services and facilities within acceptable journey times on public transport.

[see table in full representation submitted which lists sites]

Reason for change from Green to Red - Additional information — Site 1336 Map.33

1. Inadequacy of access roads.

a. Access to the site would have to be either on to the main Westerton Road or by extending the current Upper Green Drive through site 3373A Map.33.

i If an entry via site 1336 was considered I would question the viability regards safety of the said junction as it would need to join Westerton road straight after the bend when approaching towards Westerton School.

ii. If the entry was via extending Upper Green Drive I would then propose that this is a potential threat to children's safety by increasing the volume of traffic that would enter the existing development via the single entry directly opposite Westerton School which is already very congested at school opening and closing times.

iii. The width of the current developments roads on Upper Green would also be questionable as to whether they would be safe with a higher volume of traffic as currently cars can not pass comfortably without taking evasive action.

2. School Capacities

a. Westerton — the Head of Westerton has already confirmed in writing that the school is already at maximum capacity moving into the next several years.

b. Blackgates — This school has already been enlarged and again the Head has confirmed that they are also at maximum capacity once again.

c. Woodkirk — Once again it is my belief that the Head of Woodkirk is of the opinion that the school is at capacity therefore with the school being fed by Westerton and Blackgates (amongst others) how would they possibly cope with additional children in the area?

3. Other Community Facilities

a. Would other facilities such as doctors and dentists etc be overstretched by this increased population? Leigh View Medical practice has already been recently redeveloped therefore I would certainly question the potential risk with increase local population.

4. Character of the Area

a. With a development on the scale envisaged for site 1336, particularly when combined with other existing developed sites in my opinion it does not "respect the character and objectives of the local communities" as quoted in paragraph 8.4 of the Plan Overview.

b. Have all of the brown belt sites been considered for their viability. Although brown belt sites tend to be more expensive to develop these must be higher on the development priority list to assist their regeneration and preserve green belts to maintain the character of the local areas.

c.

5. Are the wards in partnership with the potential proposals?

a. Site 1336 and most but not all of 3373A are in Ardsley and Robin Hood ward however the remainder of 3373A and most of the residents who would be effected live in the Morley South ward.

Representation ID: REP08298 Question Ref: H1

Reason for change from Green to Red - Additional Information — Site 1336Tingley Map 33

1. Inadequacy of access roads.

a. Access to the site would have to be either on to the main Westerton Road or by extending the current Upper Green Drive through site 3373A Map33.

i. If an entry via site 1336 was considered I would question the viability regards safety of the said junction as it would need to join Westerton road straight after the bend when approaching towards Westerton School.

ii. If the entry was via extending Upper Green Drive I would then propose that this is a potential threat to children's safety by increasing the volume of traffic that would enter the existing development via the single entry directly opposite Westerton School which is already heavily congested at school opening and closing times.

iii. The width of the current developments roads on Upper Green would also be questionable as to whether they would be safe with a higher volume of traffic as currently cars can not pass comfortably without taking avoiding action.

2. School Capacities

a. Westerton — the Head of Westerton has already confirmed in writing that the school is already at maximum capacity moving into the next several years.

b. Blackgates — This school has already been enlarged and again the Head has confirmed that they are also at maximum capacity once again.

c. Woodkirk — Once again it is my belief that the Head of Woodkirk is of the opinion that the school is at capacity therefore with the school being fed by Westerton and Blackgates (amongst others) how would they possibly cope with additional children in the area?

3. Other Community Facilities

a. Would other facilities such as doctors and dentists etc be overstretched by this increased population? Leigh View Medical practice has already been recently redeveloped therefore I would certainly question the potential risk with increase local population.

4. Character of the Area

a. With a development on the scale envisaged for site 1336, particularly when combined with other existing developed sites in my opinion it does not "respect the character and objectives of the local communities" as quoted in paragraph 8.4 of the Plan Overview.

b. Have all of the brown belt sites been considered for their viability. Although brown belt sites tend to be more expensive to develop these must be higher on the development priority list to assist their regeneration and preserve green belts to maintain the character of the local areas.

c.

5. Are the wards in partnership with the potential proposals?

a. Site 1336 and most but not all of 3373A are in Ardsley and Robin Hood ward however the remainder of 3373A and most of the residents who would be effected live in the Morley South ward.

Representation ID: REP02264 Question Ref: H1

3003 All sites in Drighlington should be red sites. These are all green belt and should remain as such, there will be no land left in the area. We will be joined to Leeds. Drighlington is no longer a village, there is no infrastructure, roads jammed with traffic, doctors full, no shops, poor sewerage system throughout the village. Roads already full. No schools. We do not want to be an extension of Leeds. The sites are green belt and need to be left as such, to maintain the character of Drighlington. We do not have the infrastructure for any more people or buildings. We had two schools, one has now closed, already the new school has had an extension - so where will all the children go? Why not refurbish the disused mill on Whitehall Road for housing instead of using green field sites?

Housing

Westfield Farm, Drighlington BD11

Name: Richard Marshall

Representor No: PRS03170

Representation ID: REP01024 Question Ref: H5

1079, 1072, 1077, 1143B, 1143D, 1171B, 1200A, 1258, 1284a, 1285, 1344, 2098a, 3365, 3456A.2098C, 2105, 2155, 3000, 3056.3064, 3078A, 4004, and 4029. As previously stated the amber sites that are greenbelt land should not be considered for development. Site 1032 is designated as a protected area of search this land has been retained along the edge of the existing settlement pending more suitable sites being found in the longer term this site should only be developed as a last resort.

Representation ID: REP01024 Question Ref: H2

1079, 1072, 1077, 1143B, 1143D, 1171B, 1200A, 1258, 1284a, 1285, 1344, 2098a, 3365, 3456A. All these sites are green belt sites , green belt land is there to stop urban sprawl and the destruction of the countryside that still remains in this area. If sites 1143B, 1143D, 1143F, 2155, 1274, 1032, and 2128 are built on East Ardsley West Ardsley and Tingley will just become one built up area hemmed in by the M62. Not all of these are greenbelt sites but if the development is allowed the basic principal of having greenbelt in this area will be completely wrecked!

Name: Neil Dawson

Representor No: PRS05884

Representation ID: REP06563 Question Ref: H1

Suggested sites from Green to Red;

1029
1072
1143B
1143D
1200A
1258
1344
3365
3373A
3373C
3456A

All of the above sites are in the current Green Belt with the exception of the 3373A and 3373C which are open land.

The other sites are all located within the existing Green Belt and any development would lead to increased urban sprawl between the various townships in the Outer South West, and lead to coalescence between communities.

Development of the Green Belt sites would also reduce the open green area between settlements and create encroachment into the countryside around Morley.

In addition there is insufficient road capacity in the area particularly the very busy single carriageway A650 from East Ardsley to Tingley. Even if there is no development of the above sites there is in the allocation plan over 1,200 additional new houses close to the A650 which will put additional strain on this busy road.

The Haigh Moor sites are part of a natural valley which is popular for recreational activities. The whole site is considered best treated as one, therefore if the largest part 3373B is not to be used for housing then the other parts of the site should be treated in a similar manner. This should be retained as open green space.

Site 1072 is in the Green Belt and although there are properties adjacent it is located near to the A653 and shares similar characteristics to site 3078B which is not considered suitable for development. A development at this site would set a precedent for incursion into the Green Belt between Leeds and Kirklees.

See rep for full details.

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Green and Amber Sites within the Core Public Transport Network

Table 4 below contains sites that are classified as 'Sites which have potential to be allocated for housing' and 'Sites which have potential but issues or not as favoured as green sites' that fall within 400m of the current core bus network.

The sites in this list are supported for housing growth.

Site specific mitigation would be required but it is unlikely that substantial bus service provision would be required at these sites (based on the current public transport network)

From a public transport perspective, we would encourage the prioritisation of these sites based on the proximity to the core public transport network and the bus service frequency levels.

This site adjoins the boundary of the Morley Town Centre Conservation Area. There are also Grade 11 Listed Buildings to the west (Offices occupied by Rentokil). There is a requirement in the 1990 Act that "special regard" should be had to the desirability of preserving Listed Buildings or their setting or any features of special architectural or historic interest which they possess. Consequently, if allocated, any development proposals for this area would need to ensure that those elements which contribute to the significance of these assets are not harmed.

Representation ID: REP06563 Question Ref: H4

The current number of sites required in the Outer South West is 7,200 and not withstanding my comments above on the overall numbers I would suggest the following changes to site allocations.

The total green and amber housing sites allocated in Outer South West is 9,653 whereas the plan is seeking 5,586 residential units. 1,614 housing units already have planning permission. There is therefore scope to increase the number of housing sites allocated as Red which are therefore not considered suitable for housing allocation.

There are two underlying reasons for revising the allocation of sites from Green and Amber to Red.

Firstly to protect the existing Green Belt around Morley and the Green Belt around smaller settlements in the Outer South West. In particular to restrict the sprawl of large built up areas and to prevent Morley and smaller settlements from merging to existing townships.

Secondly in my submission to the LDF in April 2012 I identified the Beeston Royds area in Outer South West as an area suitable for further significant housing development. This area is on the edge of the main urban area of Leeds. It has very good existing road links (the A61, A58 and the A6110) and it is close to the M621/M62.

There is a mixture of employment and residential use in the area and careful planning in the area should allow both employment and residential developments to take place for the duration of the plan.

Suggested sites to move from Amber to Green;

141
2078
3056
3386
4029

Site 141 is currently in employment use but is a brownfield site and as such should be considered for residential development ahead of other potential Greenfield sites.

The sites 3056, 2078, 4029 and 3386 are located in the Beeston Royds area in Farnley and Wortley ward and should be considered for residential development.

These sites could link with existing development in the area which is part of the main Leeds urban area. These developments will require a new road linking Gelderd Road and Whitehall Road but given the number of housing units this should be economically viable. The area would then have good access to the existing road network, at the Leeds Outer Ring Road and the M621/M62. It is close to retail facilities at Junction One, the White Rose Centre plus local shops in Lower Wortley. There is also potential for primary school development in the area if the total number of sites is expanded.

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Amber Sites outside the Core Public Transport Network

Table 2 below contains sites that are classified as 'Sites which have potential but issues or not as favoured as green sites' but fall outside 400m of the current core bus network. Consideration needs to be given to if this site would be able to meet the LDF public transport accessibility requirements should housing be brought forward. We are be minded to recommend that these site were not prioritised for housing until other more accessible site have been considered. Sites which fall marginally outside the 400m catchments and have high bus frequencies or are small low capacity sites are less of concern but are flagged up nonetheless.

With numerous disused brownfield sites within the 'outer south west' area it seems unbelievable that consideration is being given to the development of greenfield sites. The reason given by Leeds City Council that the brownfield sites are not to be developed is that remedial works would be too expensive. Should this be the case, it would suggest that these sites are heavily contaminated and pose a potential risk to human health and controlled waters. On this basis I would enquire why these sites are not being investigated as potential 'Part2A' sites. I feel it would make more sense developing the brownfield sites prior to targetting greenfield sites, as the risk and treatment of ground contamination is simply being ignored and delayed. Brownfield sites identified include but not limited to 2117, 2096, 2096A, 2096B, 2096C, 3075

Representation ID: REP01655 Question Ref: H3

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Red Sites within the Core Public Transport Network

Table 5 below contains sites that are classified as 'Sites not considered suitable for allocation for housing' that fall within 400m of the current core bus network. From a public transport perspective, these sites (in principle) would be acceptable for housing development. For the larger sites, site specific mitigation would be required but it is unlikely that substantial bus service provision would be required at these sites (based on the current public transport network).

Representation ID: REP07126 Question Ref: H7

1030 Pymont Farm - I agree that this should be red for the reasons set out in the consultation document – GreenBelt, access and that it does not relate well to the existing development. If development were allowed on this site it would also make it more difficult to protect the rest of the Green Belt around this site. Residents have suggested that this site might make a useful extension to the cemetery.

1050 Land off Westfield Road – I agree that this site should be red for the reasons set out in the consultation document. Green Belt, scale doesn't relate well to existing settlement and would result in significant urban sprawl.

2103 Allotments Copley Lane – I support the designation of this site as Red. In response to question G9 this site and the neighbouring site need to be retained as an important local amenity greenspace – they are currently used for allotments, a community orchard and community garden.

2104 Leeds Road Lofthouse – I support the designation of this site as Red for the reasons set out in the consultation document.

3084 Cemetery Lane, Lofthouse – I support the designation of this site as Red for the reasons set out in the consultation document.

3445B Leadwell Lane, Robin Hood – I support the designation of this site as Red. Again this is a Green Belt site and one that is not connected to the existing residential area. The site is significant in size and scale and would have a harmful impact on the Green Belt function of separating settlements – in this case Robin Hood and its neighbouring town of Rothwell.

173 The Peg Football Ground, East Ardsley – I support this designation as Red for the reasons set out in the consultation document.

314 Boyle Hall, West Ardsley – I support the Red designation of this site for the reasons set out in the consultation document.

1067A off Woodhouse Lane – I wholeheartedly support the Red designation of this site. Development here would lead to unrestricted urban sprawl into the Green Belt as well as being unsustainable in school, GP surgery and public transport terms.

1068 Stoney Lane, East Ardsley – I support the Red designation of this site for the reasons set out in the consultation document.

1143A Land off Old Thorpe Lane, Tingley – This site is not suitable for development and should stay Red. It is Green Belt, would be contingent on development on the neighbouring site, therefore resulting in an unsustainable level of new housing in this one location and would result in urban sprawl. Concerns have also been raised by a resident about the air pollution levels which are significant in this vicinity near to the motorway and Tingley roundabout. Pollution levels should be thoroughly checked out in this area and around junction 41 before any further housing is built in either of these two locations.

1143C Spinkwell Lane Playing Fields, Tingley – this site should be protected as playing fields. It is not suitable for housing!

1143E Tingley Athletic Ground, East Ardsley – as per comments for 1143C this site should be protected for playing fields. It is not suitable for housing!

1260 N and S of Batley Road, West Ardsley – a completely unacceptable and unsustainable scale of development. The site is Green Belt. This would lead to erosion of the separation between districts and intolerable pressure on the very limited local amenities.

2096 West Wood Road, Middleton, 2099 Dunningley Hill Farm and 2104 Leeds Road, Lofthouse – I support the Red designation of these sites for the reasons set out in the consultation document.

3075 Scrapyard, Thorpe Lane, Middleton – Whilst supposed to be Green Belt this site is currently in use as a scrap yard. Enforcement action is being sought by a Middleton Councillor. The site as it stands extends too far to the South and is not well enough connected to existing settlements. Access onto Thorpe Lane would also need to be well thought out given the bend in the road here.

3320 Thorpe Villa and Middleton Lane, Thorpe – I support the Red designation of this site for the reasons set out in the consultation document and because of the need to retain the separation between settlements.

3372 East of Baghill Road - I support the Red designation of this site for the reasons set out in the consultation document.

3373B Haigh Wood, West Ardsley - I support the Red designation of this site for the reasons set out in the consultation document. This wood is well used and much loved by the local community and walkers and cyclists from further afield and must be protected.

3456B Ardsley Reservoir - I support the Red designation of this site for the reasons set out in the consultation document and because it would lead to the erosion of the separation between the villages of East and West Ardsley.

2104 - Agree should be red - see submitted representation for full details.

This site is Green Belt land and its development would represent significant sprawl in relation to the size of the settlement. It also does not connect well to existing dwellings and hosts a Local Nature Area in the northern section.

Development of the site would mean the loss of the railway embankment that is used for recreation and pastimes, and is home to an abundance of wildlife (including the occasional deer).

The size of the development upon this site is also disproportionate in relation to the existing settlement.

The CVRA considers this site inappropriate for development.

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Red Sites within the Core Public Transport Network

Table 5 below contains sites that are classified as 'Sites not considered suitable for allocation for housing' that fall within 400m of the current core bus network. From a public transport perspective, these sites (in principle) would be acceptable for housing development. For the larger sites, site specific mitigation would be required but it is unlikely that substantial bus service provision would be required at these sites (based on the current public transport network).

Representation ID: REP01267 Question Ref: H5

Site ref 1274Reason - The current infrastructure in East Ardsley already cannot cope with the current population. The school is already full, with siblings of existing pupils already unable to gain a place at the same school. Local doctors surgeries no longer accept new patients from East Ardsley. The A650 Bradford Road already struggles to cope with the volume of traffic, with regular lengthy queues at various traffic lights in and around East Ardsley, which are particularly bad during morning and afternoon rush hours. Traffic actually grinds to a halt on the A650 when there are problems on the nearby motorway networks causing traffic to divert to avoid motorway delays. Further development would mean that there is strong likelihood that the current infrastructure would collapse under the pressure of an increase in population and traffic. Site ref - 2155Reason - The current infrastructure in East Ardsley already cannot cope with the current population. 2105 – East Ardsley Adult Training Centre, Tingley

4.34 This site is located on the southern edge of East Ardsley and is currently allocated in the Leeds UDP as a protected playing pitch. Both national and local planning policies stress the importance of protecting such areas given the important contribution they can make to the health and wellbeing of communities.

4.35 Such areas should not be built on unless it can be demonstrated that the land is surplus to requirements. Table 10.5.1 outlines the surpluses and deficiencies in different types of greenspace in the Outer South West area.

4.36 It clearly states that there is a deficiency of 0.47 Ha in the Ardsley and Robin Hood Area . Given this acceptance that there is a deficit, any future supplementary assessment would clearly fail.

4.37 Given the accepted importance of green space and the identified deficit in this area, the site should be discounted.

Recommendation – reclassify this site as ‘red’ due its current designation as a protected playing pitch and the importance of retaining such areas of land to meet the principles of the Framework.

Representation ID: REP06082 Question Ref: G16

G16 East Ardsley Training Centre, Tingley N6 allocation deletion.

Sport England's statutory role and our playing field policy will still apply on this playing field site. We would oppose its N6 allocation deletion as this would fail to recognise the site former use and current land use as playing fields/sport and recreation facilities.

The outer south west area has by far the worse deficiency in outdoor sport, something this site could help rectify. Regard has to be had to the evidence available and ensure if developed the outdoor sports facilities are replaced like for like in a suitable location.

Land no longer in use for sport is not an argument for its disposal to other uses. In Sport England's experience it is more likely this is down to the site owner closing the site off rather than lack of demand to make use of the playing field for sport.Furthermore assessment on whether other open space typologies are more suitable is required before this is lost to housing development

Representation ID: REP07126 Question Ref: H4

2105 Healey Croft ATC, Tingley – A smaller scale development on this site might be acceptable. It is part brownfield. Part however should be retained for recreational greenspace. Given that my ward is deficient in outdoor sports and children and young people's equipped play I would welcome consideration of some different outdoor sports use for part of this site e.g. tennis courts.

Name: Neil Dawson

Representation ID: REP06563 Question Ref: H4

Suggested sites from Amber to Red;

309
1067B
1069
1143F
1220A
1274
1275A
1279
1332
2105
2155
3000
3064
3078A
4004

These sites are almost all located within the existing Green Belt and expansion into the Green Belt would lead to increased urban sprawl between the various townships in the Outer South West, and lead to coalescence between communities

Development of the Green Belt sites would also reduce the open green area and provide encroachment into the countryside around Morley and other smaller townships.

In addition there is insufficient road capacity and little scope for expansion for other necessary services. There would be a requirement for new or upgrading of existing roads which would therefore favour development on sites that are already located within the Morley or the Leeds Urban areas rather than eroding the Green Belt further.

Site 3078A is close to potential development in Kirklees and could lead to the complete erosion of the Green Belt and open green space between Leeds and Kirklees.

Any further development at sites 1275A and 1279 would reduce the Green Belt between the existing residential boundary and the A653 Dewsbury Road to a narrow strip which would put pressure in future years to extend residential use further east.

See rep for full details.

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Amber Sites outside the Core Public Transport Network

Table 2 below contains sites that are classified as 'Sites which have potential but issues or not as favoured as green sites' but fall outside 400m of the current core bus network. Consideration needs to be given to if this site would be able to meet the LDF public transport accessibility requirements should housing be brought forward. We are be minded to recommend that these site were not prioritised for housing until other more accessible site have been considered. Sites which fall marginally outside the 400m catchments and have high bus frequencies or are small low capacity sites are less of concern but are flagged up nonetheless.

Name: L. A Mitchell

Representor No: PRS00327

Representation ID: REP02264 Question Ref: H4

2124 All sites in Drighlington should be red sites. Should be green belt, how can Wakefield Road cope with any more traffic, the roads are already coping with very heavy traffic where would access be. The new by pass is already full of traffic again the village does not have infrastructure for any more people, transport or houses. The schools are full. We had two schools, one has now closed, already the new school has had an extension - so where will all the children go? Why not refurbish the disused mill on Whitehall Road for housing instead of using green field sites?

Name: Doreen Goor

2124 Spring Gardens Drighlington, Site Capacity 208, Ward Morley North

Would need access through another, smaller development giving an overall development size of 256 households. The site is bounded by an area considered not to be suitable for housing development and so would be a discreet addition to the existing settlement. The concerns regarding infrastructure and access to main roads apply to this site.

2124 –Land at Spring Gardens Drighlington. Amber to Red access to this site would be via site 3003 and once again in our opinion sufficient brown field sites are available.

Name: Gemma Wood

Representor No: PRS05077

Representation ID: REP05644 Question Ref: H4

No. There is no suitable access to this site. And Drighlington's drainage system (foul water) 'leaks' below the site. So this site should be 'Red'. It has no defensible boundary

Name: Miller Homes

Representor No: PRS05125

Representation ID: REP06465 Question Ref: H1

Site 2124

We object to the rating of site reference 2124, Spring Gardens, Drighlington as Amber (sites which have potential but issues or not as favoured as Green sites). We believe this site should be rated Green in the Site Allocations plan.

See also representation submitted for full details.

Representation ID: REP06465 Question Ref: H11

Site 2124

Conclusions

The site at Spring Gardens is currently allocated as safeguarded land. The draft Core Strategy confirms that PAS safeguarded land will provide one of the prime sources for housing allocations within the LDF Allocations Document. The site is in a sustainable location as demonstrated by the sustainability plan. The site is close to local services, retail parks, schools and health facilities. The site is also well located to access local employment areas, particularly those around Junction 27 of the M62. The site is within the settlement limits of Drighlington and is adjacent to residential development on three sides. The Outer South West housing market area has a significant housing requirement and the development of this site could make a contribution towards this.

No major physical or environmental constraints have been identified on this site which would preclude its development. The site has the potential to deliver a range of benefits:

- ☐ Delivery of new family housing including open market homes and affordable housing
- ☐ Direct and indirect construction jobs
- ☐ 106 monies in transport, education, public open space
- ☐ Increased expenditure in the local economy
- ☐ New Homes Bonus
- ☐ Provision of new public open space

The site is deliverable when considered against the definition of deliverable in the Framework (footnote 11 of paragraph 47). The site is available now given the agreement in place between the landowners and a national housebuilder. The site is in a sustainable location, suitable for the delivery of housing as detailed in this response. There are no insurmountable physical problems of limitations and as such the site is considered to be suitable for housing. It is considered that this is an achievable site, which has a realistic prospect of being delivered within 5 years; there are no known viability issues restricting the site from coming forward.

Therefore for the reasons set out above, we support the housing allocation of site reference 2124, Spring Gardens, Drighlington.

Representor No: PRS05410

Representation ID: REP06016 Question Ref: H4

2124 – Spring Gardens, Drighlington

4.21 This is a Greenfield site located on the northern edge of Drighlington. The site is currently identified within the UDP as an area of PAS.

4.22 Our immediate concerns relate to the proposed site access and therefore its deliverability. Access into the site is anticipated to be via site 3003. The proforma for the site details the comments of the councils highways department and states that access through site 3003 'is unsuitable for large development'

4.23 The thoughts of the highways department are clear. Given this is the only suitable access into the site this raises a serious question mark over its deliverability.

Recommendation – reclassify the site in 'red' due to the level of uncertainty surrounding the access arrangements

Representor No: PRS06750

Representation ID: REP07983 Question Ref: H4

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Amber Sites outside the Core Public Transport Network

Table 2 below contains sites that are classified as 'Sites which have potential but issues or not as favoured as green sites' but fall outside 400m of the current core bus network. Consideration needs to be given to if this site would be able to meet the LDF public transport accessibility requirements should housing be brought forward. We are minded to recommend that these site were not prioritised for housing until other more accessible site have been considered. Sites which fall marginally outside the 400m catchments and have high bus frequencies or are small low capacity sites are less of concern but are flagged up nonetheless.

Housing

Manor House Farm, Churwell

Name: Andrea Armstrong

Representor No: PRS00210

Representation ID: REP05381 Question Ref: H1

As residents of Churwell, we are writing with regard to the proposed housing development sites within our local community. We all share the boundary of one of the sites in question, Site 1220A 'Land East of Churwell', and are particularly concerned over any possible proposal to build in this location. We understand this is currently classified as 'Amber: Sites which have potential but issues / not as favoured as green sites'. As clearly some of the issues have already been identified, we would like to re-iterate and clarify some of the issues that are of greatest concern to us as residents immediately neighbouring this location. Churwell Hill / Elland Road is the main road from Morley towards Leeds, and as such suffers from a very high volume of traffic, particularly at commuting hours, when the traffic is at standstill to and from the Ring Road. This road does not have the ability to cope with greater volumes of traffic passing through the area, without creating greater risks to safety (cyclists, pedestrians, drivers) and increased congestion. This has already been identified as an issue as there are a number of speed cameras within a short space along this road. This particular site, lies next to a busy train line, again posing dangers to locals, as it is not unusual for us to see people walking next to or crossing over the train line. This risk would only increase with additional housing in the area. Additionally, we understand the site has been identified as a historical land-fill area, again highlighting unsuitability. Regarding the 6 sites identified in Churwell overall, the general infrastructure within the village is not of a scale that could accommodate such volumes of new houses, schools, doctors, dentists, and services in general would not be able to take on a new influx of residents. Based on these, and other points, we strongly support the re-classification of this area (Site 1220A), and the other proposed Churwell sites, to colour code 'Red: Sites not considered suitable for allocation of housing'. Instead, we would ask the Planning Department to look at the areas within Leeds City Council that already have planning permission, and also, to revitalise housing currently standing empty, rather than look to build on Greenfield areas.

Name: Joanna Coultous & Stephen Seale

Representor No: PRS00289

Representation ID: REP02230 Question Ref: H1

1282 / I am writing to voice my objection to Leeds City Councils LDF Site allocation plans in Churwell.

I have lived in Churwell since August 2000. We moved here because we were impressed by the green spaces around and the woodland area which surrounds our home. We also access Pit Hill for walking and the fantastic views across Leeds. During the Autumn there is a community bonfire which is attended by many of the local people. In winter and snowy weather it is used for sledging and again an opportunity for the local people to have recreational enjoyment.

Despite what the farmer who owns the land says it has only been ploughed twice since I have lived here. Once was just before the application for Village green status! It has always been an open space for people to enjoy. It would be a tragedy for it to be built on not only because of the impact on local people and the loss of yet another green area but the devastating impact on traffic along Churwell Hill.

Anyone who uses Churwell Hill on a daily basis to get to work has a constant battle and sometimes the traffic is backed up to the top of Westwoodside. The building of the 'New Village' has added to the chaos and that project should be a warning to planners of the negative impact thoughtless building has on a community. The road itself is breaking up under the pressure of the traffic. Heavy plant and construction would cause further inconvenience to motorists at peak times. It is to my mind, a vision of hell.

Whilst living in Churwell I have been unable to access a local dentist as they are all chock a block. I have to travel to Bromley to have my teeth seen to. I have also seen the growth of the local school and the fact that many of my neighbour's children cannot get a place there.

Churwell is a lovely place to live but it appears that due to its very popularity planners see it as an easy target to build on. Surely there are lots of areas around Leeds that could be used or is there some political agenda going on. I am not a NIMBY as I realise that people need homes but there is also a need for open spaces for those people to enjoy.

It would be totally unsustainable if the proposed 1248 were to be built in Churwell. The plans should at least include provision for a new Primary school, High school, medical centre, church and shops as well as creating a way into the Village that does not involve spilling onto Churwell Hill. Without the infra structure it would be untenable.

I hope that sense prevails over profit and these plans are altered or dropped completely. I for one would be happy to take civil action against any of these plans. It seems that there is no real need in this area for this housing and the introduction of at least 5000 people and possibly over 3000 extra cars which would add pollution and overcrowding of already overcrowded amenities. How many people on the planning committee live in Morley or Churwell or would consider moving into these superfluous dwellings? Leave Churwell alone and let us enjoy what remains of the open spaces we have.

It would be a great shame if Churwell Park were to be the only green space left in Churwell.

Yours truly,

2125 - Green to red. Because Churwell Hill is far too busy, Churwell schools are full to capacity as are schools in Morley. These plans are ridiculous.

Name: Janet Harrison

Representor No: PRS00304

Representation ID: REP02245 Question Ref: H1

Site 1282 - Laneside Farm (suggested capacity 542 houses).

Site 2125 - Manor House Farm (suggested capacity 77 houses).

I WISH THE ABOVE SITES TO BE COLOUR CODED RED

I wish to object to the above plans for the following reasons:-

Traffic Congestion; Elland/Victoria Road which runs the length of Churwell has an enormous amount of traffic during the main rush-hour and now a days during the off peak hours as well. How would building an estimated 1,248 houses, all of which will need to use this road for access, be of anything but disastrous for the local community of Churwell. Surely the extra traffic would bring the Outer Leeds Ring-road to a halt. If you are not of the same opinion please write to me and convince me otherwise.

Schools; Churwell Primary School is 2-form and is full. Local residents are being turned away as it is. The proposed building will be nearer to the school enabling them to gain priority above many of the current local residents. Increasing CPS to 3-form would bring capacity for 360 children. A number that now where near meets the needs of 1,248 houses. Is LCC prepared to build a school with the infrastructure to cope with the influx? Our 3 High Schools are also at capacity. Are you planning on building a new High School as Well?

Doctors & Dentists; There is no dentist in Churwell and only 1 Doctors Surgery. Dentists in Morley are full and most only take new private patients. This is the situation now and if there is no new infrastructure along with the new housing then it will become very difficult in Churwell and Morley to obtain the basic essentials for healthy living.

Access; The roads to the proposed sites are already under pressure of traffic, indeed on some access roads the traffic is reduced to single file because of cars parked outside domestic property. Churwell New Village is appalling re the way car-parking was under calculated by the Developers and approved by Leeds City Council. It is impossible to drive a vehicle along some streets as the roads are congested with parked cars owned by the residents. How is access to be guaranteed to the new housing when it will have to travel on these congested roads?

Loss of Green Space; Site 1282 is the only green-space which separates Churwell from Morley's suburbs. These field are presently farmed and have public footpaths for access into this small bit of countryside. The area is well used by the local residents of Churwell and Morley. It is inconceivable that you wish to remove this asset and merge Churwell into Morley by filling this much appreciated green-space with housing.

Site 2125 was last year the subject of a 'Village Green' application and supported by letters of over 150 local residents in support of this application. These applications came for people who had roamed freely over this land for more than 20 years. There were as many applications submitted by people who had roamed for less than 20 years. If you read the Inspectors report the failure of this application was on a technicality and not because it was found that people had not and do not use this land for recreational purposes. Your proposals will fill this land with unnecessary housing and remove the last remnants of land where our children can get outside and observe the flora and fauna in our local community.

Brownfield Sites; Leeds has enough brownfield sites in which to start building the housing numbers recommended in the LDF. Make the Property Developers use this not the easier and cheaper green spaces they are lobbying hard to use.

Twenty years ago I had the choice to live and work in Leeds or Manchester. I chose Leeds because it had a vision and integrity towards its building plans, leaving spaces between the various localities, which gives a sense of space and a feeling of belonging to an individual area.

Manchester's rambling urban sprawl, where you have no idea what town you are in let alone what area of Manchester sent a shudder down my spine.

Please, please don't turn Leeds into the same endless urban environment by allowing mass housing to be built on small green-space between the existing local areas. I will not be the only person who, considering where to live will feel Leeds has a unique balance.

I know you have to have a vision to improve Leeds. You also have a responsibility not to spoil it for the generations to come.

Name: Wenda P Whitehead

Representor No: PRS00312

Representation ID: REP04786 Question Ref: H1

2125 Manor House farm, Churwell, Site Capacity 77, Ward Morley North

This is part of the last remaining green area in Churwell. It is much used as a recreational and educational area which would be adversely affected by development. The local infrastructure cannot cope with such an addition.

Representation ID: REP02254 Question Ref: H1

Referring to the LDF sites in the Morley area I would like to present my objections as follows:-

The Green areas:-

Site 1282 - Laneside Farm (suggested capacity 542 houses).

Site 2125 - Manor House Farm (suggested capacity 77 houses).

Objection to the above because of the situations regarding:-

SCHOOLS - For many years now we have had problems finding places for our children in Morley/Churwell schools. After discussions with the Education Department we did manage to obtain an additional class intake at Asquith School but all other schools are full to capacity with no more room for extra classes or extensions. Can you find money to build new schools or areas to put them?

TRAFFIC — Elland Road is the main road to Leeds from Morley and is already "nose to tail" during the rush hour every day. It is used often by Ambulances, Police, etc. during these periods which does often cause problems it being a narrow road with bends and narrow pavements through a built up area. I personally have had three vehicles into my fence/wall.

FACILITIES — Dentists/Doctors. These facilities already have problems with the local Doctors very often being unable to offer appointments in less than a week.

We are already really worried about the extra problems the Daisy Hill development will cause without adding the unbelievable numbers of housing to an already saturated area.

I sincerely trust you will give the above comments your consideration and look at this matter in a sensible way by transferring ALL OF THESE SITES TO RED.

2125 - Not enough schools, no policing, not enough doctors, road cannot take more traffic.

Name: William Lee

Representor No: PRS00454

Representation ID: REP02402 Question Ref: H1

2125 - Churwell isn't a village anymore. My back garden looked on to field belonging to a farm. On the plans before building houses my back garden didn't show a gable end facing my garden. Enough is enough.

Name: Freda Lee

Representor No: PRS00455

Representation ID: REP02403 Question Ref: H1

2125 - Churwell has taken too many new houses that we are getting overcrowded. Schools can't cope, doctors can't cope.

Name: Jatinder Singh Mann

Representor No: PRS00457

Representation ID: REP02401 Question Ref: H1

2125 Manor House Farm - Green to Red

Traffic in Churwell is already at a standstill at rush hour/peak times. It cannot take any more without major problems for locals. This will also affect schooling as my neighbour has had problems obtaining a place at Churwell Primary School for his son - this is a scandal!! hope to start a family in the future and do not wish to as my neighbour has been forced to do.

It goes without saying that all areas will be at breaking point with the extra pressure. As a taxpayer I would be grateful if you do not develop on the little bit of green we have left in this area. Britain was a sign of fortitude but has become a one trick pony. First the bubble burst in housing a few years ago and still you don't seem to get the message.

No more houses in Churwell!

- 1) Churwell has already over a sustained period of time undergone a major development in the building of houses. The infrastructure in the area cannot cope with any more.
- 2) I have lived in Morley all my life and we know that school places are already at a premium and as a we still only have the same 3 senior schools that were here 45 years ago when I started.
- 3) Churwell Hill is extremely busy and will only get busier if further homes are built and become more dangerous.
- 4) Doctors and dentists will not be able to cope.
- 5) Is Morley to be totally devoid of any green, recreational land for people to enjoy?
- 6) What about North Leeds being used for the building of more houses!!

No more houses on any Churwell sites. Full to the brim.

Name: Eric Newton

Representor No: PRS00577

Representation ID: REP05334 Question Ref: H1

As residents of Churwell, we are writing with regard to the proposed housing development sites within our local community. We all share the boundary of one of the sites in question, Site 1220A 'Land East of Churwell', and are particularly concerned over any possible proposal to build in this location. We understand this is currently classified as 'Amber: Sites which have potential but issues / not as favoured as green sites'. As clearly some of the issues have already been identified, we would like to re-iterate and clarify some of the issues that are of greatest concern to us as residents immediately neighbouring this location. Churwell Hill / Elland Road is the main road from Morley towards Leeds, and as such suffers from a very high volume of traffic, particularly at commuting hours, when the traffic is at standstill to and from the Ring Road. This road does not have the ability to cope with greater volumes of traffic passing through the area, without creating greater risks to safety (cyclists, pedestrians, drivers) and increased congestion. This has already been identified as an issue as there are a number of speed cameras within a short space along this road. This particular site, lies next to a busy train line, again posing dangers to locals, as it is not unusual for us to see people walking next to or crossing over the train line. This risk would only increase with additional housing in the area. Additionally, we understand the site has been identified as a historical land-fill area, again highlighting unsuitability. Regarding the 6 sites identified in Churwell overall, the general infrastructure within the village is not of a scale that could accommodate such volumes of new houses, schools, doctors, dentists, and services in general would not be able to take on a new influx of residents. Based on these, and other points, we strongly support the re-classification of this area (Site 1220A), and the other proposed Churwell sites, to colour code 'Red: Sites not considered suitable for allocation of housing'. Instead, we would ask the Planning Department to look at the areas within Leeds City Council that already have planning permission, and also, to revitalise housing currently standing empty, rather than look to build on Greenfield areas.

Churwell Hill is already a very busy road especially at peak tiomes - cannot take much more - and cannot be widened. Busy road - no pl;aces available at doctors/dentists/schools - Unless more are also planned.

Name: Ward

Representor No: PRS00709

Representation ID: REP02711 Question Ref: H4

1282 / 2125 – Change to red for the following reasons:

- The increase in traffic in the area – many on Churwell Hill, has already increased from the opening of Tesco.
- The increase in children trying to find a school nearby. It was bad enough 15 years ago when we had to find alternative schools.
- Living in the middle of an over populated area – estate after estate, after estate – causing an increase in crime
- How long will be waiting for doctors / dentists etc
- Massive traffic increase – since Churwell new village, Churwell is a traffic jam now instead of what it was – a quiet village.

Name: Trevor Wilson

Representor No: PRS00711

1282 / 2125 -

I wish to object to the above plans for the following reasons:-

Do the members of the Leeds City Planning Dept. actually care about the people who live in or around the sites they plan to develop, or do they only see increased council tax revenues. If they lived in the areas affected by the above proposals they would certainly think again.

The plan to also build several hundred houses on Daisy Hill will cause many traffic problems at the top of King George Ave, Croft House Road, and New Bank Street. These roads all come out onto Elland Road or roads connecting at the top of Churwell Hill. From St Peters Church all the way through Churwell to the roundabout near the Dry Salter's Arms it is one long traffic jam every morning and every evening. It takes at least 30-45 mins to cover 1 1/2 miles and then another 30-45 mins to actually get into Leeds. Throughout the day Elland Road up through Churwell is a busy road.

Upwards of 1500 houses are planned on all sites, on today average of 1.5 cars per household that will mean another 2250 cars from King George Ave, Sandmead Close, Westwood Side, Harwell Ave, and New Village Way all coming out onto Elland Road in the Churwell area. Elland Road can't cope with the present traffic, without this increased volume. Or have the planners requested that the developers put new roads in these areas so traffic is diverted away from Elland Road.

Also what about the basic infrastructure of the area schools, shops, community centres, environmental issues etc. have any of these been looked at? Or do the planners only see £ signs, over the past 40 years Churwell/Morley has had more than its share of house building, and it's about time Leeds Council looked elsewhere to raise money.

Sincerely trust you will give the above comments your consideration and look at this matter in a sensible way by transferring ALL OF THESE SITES TO RED.

Representation ID: REP02867 Question Ref: H4

1282 / 2125 -

Re: LDF SITES IN MORLEY

The Green areas:-

Site 1282 - Laneside Farm (suggested capacity 542 houses).

Site 2125- Manor House Farm (Pit Hill & Allotments)(suggested capacity 77 houses).

I wish to object to the above plans for the following reasons:-

Do the members of the Leeds City Planning Dept. actually care about the people who live in or around the sites they plan to develop, or do they only see increased council tax revenues. If they lived in the areas affected by the above proposals they would certainly think again.

There is a limited amount of school placements and childcare in the area and most are running to their full capacity. Doctors and dentists are also limited on new patients. There is already heavy traffic congestion at peak times and more homes would add to this problem. These developments would reduce the already limited amount of outdoor open areas available to residents.

2125 Manor House Farm - Green to Red

Another Green Belt area. If built upon is there going to be any green left in Churwell?

If this site is built upon the road network will be choked? There is not enough infrastructure to cope with additional housing. Also where are all the children going to be schooled? Not enough schools at the moment.

Representation ID: REP05332 Question Ref: H1

As residents of Churwell, we are writing with regard to the proposed housing development sites within our local community. We all share the boundary of one of the sites in question, Site 1220A 'Land East of Churwell', and are particularly concerned over any possible proposal to build in this location. We understand this is currently classified as 'Amber: Sites which have potential but issues / not as favoured as green sites'. As clearly some of the issues have already been identified, we would like to re-iterate and clarify some of the issues that are of greatest concern to us as residents immediately neighbouring this location. Churwell Hill / Elland Road is the main road from Morley towards Leeds, and as such suffers from a very high volume of traffic, particularly at commuting hours, when the traffic is at standstill to and from the Ring Road. This road does not have the ability to cope with greater volumes of traffic passing through the area, without creating greater risks to safety (cyclists, pedestrians, drivers) and increased congestion. This has already been identified as an issue as there are a number of speed cameras within a short space along this road. This particular site, lies next to a busy train line, again posing dangers to locals, as it is not unusual for us to see people walking next to or crossing over the train line. This risk would only increase with additional housing in the area. Additionally, we understand the site has been identified as a historical land-fill area, again highlighting unsuitability. Regarding the 6 sites identified in Churwell overall, the general infrastructure within the village is not of a scale that could accommodate such volumes of new houses, schools, doctors, dentists, and services in general would not be able to take on a new influx of residents. Based on these, and other points, we strongly support the re-classification of this area (Site 1220A), and the other proposed Churwell sites, to colour code 'Red: Sites not considered suitable for allocation of housing'. Instead, we would ask the Planning Department to look at the areas within Leeds City Council that already have planning permission, and also, to revitalise housing currently standing empty, rather than look to build on Greenfield areas.

1282 / 2125 -

I wish to object to the above plans for the following reasons:-

Some of the sites are on green belt land such as 1282— Laneside Farm. I think it is important to preserve some green spaces locally as once they are built on, they will be lost forever!

The 1282 Laneside Farm and 2125 Manor House Farm sites in particular separate Churwell from Morley which helps Churwell retain its village character. The same can be said for all sites as they are all bordering Churwell.

Local Schools cannot cope with the number of children currently enrolling into them. My son started Churwell School in 2012 at which there were 85 applicants for only 60 places in the reception year. Some Churwell children were allocated places outside the area in Beeston, etc. Other Schools in Morley similarly had greater numbers of applications than places resulting in an extra class having to be run in Asquith School, Morley. The numbers of houses proposed for the area will obviously mean that there would be a huge increase in children in the area which will affect both primary and high schools. Local councillors/MPs are campaigning for Churwell children to be offered places at Churwell Schools and also Morley children to be offered a place at a Morley school where it has been requested. Doctors and dentists are at capacity currently.

Such a massive development will have an impact on the roads. It is now 'the norm' for traffic to queue out of Churwell towards the ring road on a morning and for a slow crawl of traffic back up through Churwell in the evening rush hour. Not only would extra traffic inconvenience road users further, but I think pollution increases should be looked into too.

Finally, I am aware that these developments have been publicised and that there is a lot of local opposition to them. Please remember that the council is run to represent the community and allowing unsustainable levels of house building such as these is against the vast majority of the public's wishes. I would suggest visiting Churwell to conduct a survey to assess opinion of the public. Please side with the Leeds communities rather than the national house builders.

I sincerely trust you will give the above comments your consideration and look at this matter in a sensible way by transferring ALL OF THESE SITES TO RED.

2125 Manor House Farm Green to Red. In green belt. Increase in traffic on surrounding roads/no space at local schools for increase in children and for Churwells population.

Name: Reece Parker

Representor No: PRS01614

Representation ID: REP03765 Question Ref: H1

2125 - Green to Red. Not enough schools and doctors. All of the allotments are in full use. I fully appreciate the need for housing as we have a desperate shortage. Too many were sold off 15-20 years ago. My biggest objection is the traffic congestion. It takes me a long time to get to work. It is very busy at the White Rose at Xmas time and almost impossible when Leeds United Play at Elland Road. There is even the possibility of a future park and ride system nearby which if given permission to go ahead will cause further traffic problems.

Representation ID: REP08301 Question Ref: H1

1282 / 2125 -

I wish to object to the above plans for the following reasons:-

The above areas represent a green area that provides access to the Countryside in Urban Morley, Churwell New Village and Churwell.

Observation of bats, kingfisher, ducks and swifts. Much is made of supposed plentiful green sites but when we take away local green space, we can't get it back.

Proposed housing would require heavy vehicle traffic to gain access. Since New Village Way has a preponderance of town houses and flats, many cars are parked on both sides of the road, limiting access via this route. It is also relevant that children play on this and adjoining streets, making the addition of Heavy vehicle through traffic an increased hazard.

The overgrown fields which lead up to Pit Hill and the ground between the hill and the motorway have been grazed by tethered horses and ponies, since fixed by chain and tyres or stakes would indicate use by the travelling community.

The only other use for the land has been by local people walking dogs, sledging on the hill and children using the land for 'adventure'.

The areas house market has suffered greatly following the crash in the housing market in 2007. Persimmon sold property up to a value of 195000 and house prices have fallen to 151000 in the space of 6 years. Further house stock in this area would further devalue existing housing prices.

It was stated by Persimmon when specifically asked if any further construction was envisaged, which would detract from the current views and house prices, that no further construction was likely due to the presence of the existing farm and poor drainage of the land below it.

Poor drainage and the presence of a storm culvert through Churwell New Village would raise concerns about the risk of flooding due to an increase of housing in that area.

No one wants to see further development in their own area, myself included. I am surprised by the imbalance of the planned housing development which appears to be focussed on the South side of Leeds. Why is Morley so heavily placed in the current plan. As I understand over the last two decades there has been a heavy burden placed on South Leeds with a minor role for North Leeds. This current plan further adds to that burden. It is very important that a Balance is seen to be shown in Housing Planning in all areas of Leeds.

Sincerely trust you will give the above comments your consideration and look at this matter in a sensible way by transferring ALL OF THESE SITES TO RED.

Re: LDF SITES IN MORLEY

The Green areas:-

Site 1282 - Laneside Farm (suggested capacity 542 houses).

Site 2125 - Manor House Farm (Pit Hill & Allotments)(suggested capacity 77 houses).

I wish to object to the above plans for the following reasons:-

The above areas represent a green area that provides access to the Countryside in Urban Morley, Churwell New Village and Churwell.

Observation of bats, kingfisher, ducks and swifts. Much is made of supposed plentiful green sites but when we take away local green space, we can't get it back.

The 2011 Census showed that there were 12000 empty properties in Leeds. I understand from discussions with Local Councillors that there are 21000 existing Planning permissions for houses around Leeds. Should we not make use of the existing empty properties and agreed housing applications before resorting to green areas.

I understand that Builders would prefer to build houses in green areas as the profit for them is greater. However the need for affordable housing and family sized homes would be more valuable to the housing pool. The reduced profits of affordable housing is more fitting in times of austerity. The Leeds City Council is not there to maximise profits for building companies.

The plan shows groups of houses but fails to show the infrastructure required to facilitate this. More school places, more GPs, dentists, parking spaces, roads and jobs. No discussions have occurred between planners and the Highways Agency to determine impact and solution to the added traffic to the road network. Roads are already under strain from the existing traffic.

The Churwell New Village is constantly choked with cars parked on the roads. The plan had houses very closely packed with narrow garages that struggle to fit the average family car. Households don't just have one car and this adds to the existing congestion.

Proposed housing would require heavy vehicle traffic to gain access. Since New Village Way has a preponderance of town houses and flats, many cars are parked on both sides of the road, limiting access via this route. It is also relevant that children play on this and adjoining streets, making the addition of Heavy vehicle through traffic an increased hazard.

The overgrown fields which lead up to Pit Hill and the ground between the hill and the motorway have been grazed by tethered horses and ponies, since fixed by chain and tyres or stakes would indicate use by the travelling community.

The only other use for the land has been by local people walking dogs, sledging on the hill and children using the land for 'adventure'.

The areas house market has suffered greatly following the crash in the housing market in 2007. Persimmon sold property up to a value of 195000 and house prices have fallen to 151000 in the space of 6 years. Further house stock in this area would further devalue existing housing prices.

It was stated by Persimmon when specifically asked if any further construction was envisaged, which would detract from the current views and house prices, that no further construction was likely due to the presence of the existing farm and poor drainage of the land below it.

Representor No: PRS02786

Representation ID: REP05330 Question Ref: H1

As residents of Churwell, we are writing with regard to the proposed housing development sites within our local community.

We all share the boundary of one of the sites in question, Site 1220A 'Land East of Churwell', and are particularly concerned over any possible proposal to build in this location.

We understand this is currently classified as 'Amber: Sites which have potential but issues / not as favoured as green sites'.

As clearly some of the issues have already been identified, we would like to re-iterate and clarify some of the issues that are of greatest concern to us as residents immediately neighbouring this location.

Churwell Hill / Elland Road is the main road from Morley towards Leeds, and as such suffers from a very high volume of traffic, particularly at commuting hours, when the traffic is at standstill to and from the Ring Road. This road does not have the ability to cope with greater volumes of traffic passing through the area, without creating greater risks to safety (cyclists, pedestrians, drivers) and increased congestion. This has already been identified as an issue as there are a number of speed cameras within a short space along this road.

This particular site, lies next to a busy train line, again posing dangers to locals, as it is not unusual for us to see people walking next to or crossing over the train line. This risk would only increase with additional housing in the area. Additionally, we understand the site has been identified as a historical land-fill area, again highlighting unsuitability.

Regarding the 6 sites identified in Churwell overall, the general infrastructure within the village is not of a scale that could accommodate such volumes of new houses, schools, doctors, dentists, and services in general would not be able to take on a new influx of residents.

Based on these, and other points, we strongly support the re-classification of this area (Site 1220A), and the other proposed Churwell sites, to colour code 'Red: Sites not considered suitable for allocation of housing'. Instead, we would ask the Planning Department to look at the areas within Leeds City Council that already have planning permission, and also, to revitalise housing currently standing empty, rather than look to build on Greenfield areas.

Representor No: PRS05106

Representation ID: REP05686 Question Ref: H1

I would like to log my objection to the planned housing developments 1032 and 2125/2155. I live on New lane, not the one shown on the map as New lane right through from Bradford Road which is in fact a dirt road that was used for transporting coal from the old pit to the mill, but the one that is a dead end up to the fields concerned. We have had many developments in our area and this has caused many problems for the residents ie. schools are too small, it took me nearly five weeks to see my doctor which are stretched to their limit even though they, like the schools have expanded. As a village we had 2 butchers, 4 shops, newsagents, 2 chemists, dentist, doctors and 2 post offices. We now have 1 shop plus a Tesco at the petrol station, 1 post office, no chemist, no doctors, no dentist (unless you go private) and things surely cannot go on. There is no mention of any of these amenities being provided unless I have missed it, it's just houses, houses and more houses. After you approved the Appletree Court at the back of my house our garden flooded and still does in bad weather, also killing all my fruit trees as the soil was so wet. The New lane (that isn't) development suffers these problems even to the point of there being ducks swimming so not exactly good building land. Please give us a break and let the amenities we have the time to catch up or provide them.

Representor No: PRS05245

Representation ID: REP05839 Question Ref: H1

We wish to object and protest in the strongest possible terms to the proposals for building 1248 houses in Churwell.

The site numbers are 1282, 2125, 122A, 1099A, 1099B, 1996. Any research into the Churwell area will indicate how impractical these proposals are.

There is only one road in & out of Churwell which is already heavily congested during normal time and becomes completely gridlocked in the a.m. & p.m. rush hours it is also a major health & safety hazard as any observations will indicate.

Access to these proposed sites would add significantly to the already existing problems. There is already a shortage of places at schools in the area, additional population would necessitate commuting for children making even more traffic problems.

We would request that you take serious consideration of the items highlighted in this letter and permit the existing population to enjoy their amenity in safety and comfort.

Name: Sylvia Elsby

Representor No: PRS05430

Representation ID: REP06037 Question Ref: H1

2125 – Suggested change – GREEN to RED

Reason for change – In Greenbelt, few green areas left in Churwell.

Other remarks – Concerns about access through already densely built up area, Manor Farm Estate onto congested Elland Road. Concerns about impact on already over-loaded infrastructure.

Name: Jacqueline Daniel

Representor No: PRS05449

Representation ID: REP06061 Question Ref: H1

2125 – Suggested change GREEN to RED

Reasons for change - Insufficient infrastructure (schools, dentist, doctors) to cope with additional population.

Other remarks – Building on allotments takes away facilities from the existing population of Churwell, removing the little public space available.

Housing

Manor House Farm, Churwell

Name: Persimmon Homes

Representor No: PRS05691

Representation ID: REP06653 Question Ref: H1

Site 2125 – Manor House Farm, Churwell – Support in principle

We support the principle of identifying this site as green.

However the assessment does show the presence of Listed Buildings but this is not the case.

Persimmon homes has the following comments which should be taken into account in the site assessment, namely:

- Site Details
- Distances - The Council should make clear at what point / route it has used in identifying the distance to a rail station and bus stop.
- Our assessment shows that the site is well related to Cottingley rail station and is within a reasonable walking distance of frequent bus services on Elland Road.
- In particular, at the closest point of the whole site the nearest bus stop is within 400 metres of the site.
- At the closest point of the whole site that is under the control of Persimmon, Cottingley Rail Station is located less than 250 metres away. The site is therefore highly accessible and this should be reflected in the assessment.
- SHLAA – Persimmon Homes has an interest in this site and is committed to bringing forward this site for development. Therefore the site is available, suitable and achievable.
- Conformity with Core Strategy – The site is well related to a major settlement and would be a major settlement greenfield extension.

The Council has scored this site 11 out of 15. However it is unclear at this stage what methodology the council has used in reaching this conclusion and we therefore reserve the right to comment in more detail once this information has been made available.

We would recommend that the Council:

- Clarifies how it has assessed the distance to the rail station and bus stop. Nevertheless from the assessment outlined above it is clear that the site is extremely well related to Cottingley rail station (just 250m) and is within a reasonable walking distance of frequent bus services on Elland Road (within 400m).
- Correct the references to Listed buildings accordingly.
- States that the site is available, suitable and achievable.
- States that the development of this site conforms to the Core Strategy and is a greenfield extension.
- Provides further information on what information it has used to rank the site.

We have reviewed both the consultation documentation and compared this to technical work undertaken and our own assessment. We have found that:

- The site assessment work undertaken by the Council is inaccurate and not a robust basis upon which to make an adequate assessment.
- Our assessment work shows that the site has no constraints that could prevent development from coming forward on it in the near future.

The site is available it is suitable for development and is therefore deliverable. There is no known planning policy or technical constraints that could prevent development from coming forward on the site at the earliest opportunity. The site is wholly appropriate for development and should be allocated for housing in the Site Allocations Preferred Options Document.

Representation ID: REP06653 Question Ref: H11

We consider that sites 1099A, 1099B and 2125 are available immediately for development. Therefore we consider development can be achieved on the sites in the short term i.e. within 5 years and leading into the medium to longer term.

Representor No: PRS06042

Representation ID: REP06880 Question Ref: H4

Firstly I find it amazing our council can ever consider building more houses in Churwell when the facilities such as schools, doctors, are already over full capacity.

The traffic in Churwell is already at dangerous levels. The roads in and around Churwell are already over the capacity they can cope with. Churwell is a village, let us keep it that way otherwise it will just become an extension of Leeds city centre.

I also feel there is no demand for more houses in Churwell. The fact LCC is even considering these sites tells me LCC is not considering the feelings of its residents and its repairs to roads, etc is already a great let down. Totally I am in disagreement with any of these sites for the above reasons.

Name: Anthony Holmes

Representor No: PRS06179

Representation ID: REP07067 Question Ref: H1

2125 – Change suggested GREEN to RED

Reason – Greenfield Site

Other remarks – High volumes of traffic, Churwell Hill will lose its village status.

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Green and Amber Sites within the Core Public Transport Network

Table 4 below contains sites that are classified as 'Sites which have potential to be allocated for housing' and 'Sites which have potential but issues or not as favoured as green sites' that fall within 400m of the current core bus network.

The sites in this list are supported for housing growth.

Site specific mitigation would be required but it is unlikely that substantial bus service provision would be required at these sites (based on the current public transport network)

From a public transport perspective, we would encourage the prioritisation of these sites based on the proximity to the core public transport network and the bus service frequency levels.

[see table in full representation submitted which lists sites - green sites are linked to this comment]

1282 / 2125 -

I wish to object to the above plans for the following reasons:-

Some of the sites are on green belt land such as 1282— Laneside Farm. I think it is important to preserve some green spaces locally as once they are built on, they will be lost forever!

The 1282 Laneside Farm and 2125 Manor House Farm sites in particular separate Churwell from Morley which helps Churwell retain its village character. The same can be said for all sites as they are all bordering Churwell.

Local Schools cannot cope with the number of children currently enrolling into them. My son started Churwell School in 2012 at which there were 85 applicants for only 60 places in the reception year. Some Churwell children were allocated places outside the area in Beeston, etc. Other Schools in Morley similarly had greater numbers of applications than places resulting in an extra class having to be run in Asquith School, Morley. The numbers of houses proposed for the area will obviously mean that there would be a huge increase in children in the area which will affect both primary and high schools. Local councillors/MPs are campaigning for Churwell children to be offered places at Churwell Schools and also Morley children to be offered a place at a Morley school where it has been requested.

Doctors and dentists are at capacity currently.

Such a massive development will have an impact on the roads. It is now 'the norm' for traffic to queue out of Churwell towards the ring road on a morning and for a slow crawl of traffic back up through Churwell in the evening rush hour. Not only would extra traffic inconvenience road users further, but I think pollution increases should be looked into too.

Finally, I am aware that these developments have been publicised and that there is a lot of local opposition to them. Please remember that the council is run to represent the community and allowing unsustainable levels of house building such as these is against the vast majority of the public's wishes. I would suggest visiting Churwell to conduct a survey to assess opinion of the public. Please side with the Leeds communities rather than the national house builders.

I sincerely trust you will give the above comments your consideration and look at this matter in a sensible way by transferring ALL OF THESE SITES TO RED.

A development of this size is a community in itself. It does not impinge on the settlements in the Morley area and is bounded in the south by the M62 motorway. Many of the infrastructure objections made regarding green coded sites in the answer above apply also to this site. Perhaps the site boundary could be extended towards Middleton so that a school can be provided? This site could provide 20% of Outer South West's currently proposed target without materially affecting existing communities with notable exception of transport problems.

H3 - 2127 Tingley Station, Capacity 1133, Ward Ardsley & Robin Hood

A development of this size is a community in itself. It does not impinge on the settlements in the Morley area and is bounded in the south by the M62 motorway. Many of the infrastructure objections made regarding green coded sites in the answer above apply also to this site. Perhaps the site boundary could be extended towards Middleton so that a school can be provided? This site could provide 20% of Outer South West's currently proposed target without materially affecting existing communities with notable exception of transport problems.

Name: Mark Brennan

Representor No: PRS03782

Representation ID: REP01655 Question Ref: H1

With numerous disused brownfield sites within the "outer south west" area it seems unbelievable that consideration is being given to the development of greenfield sites. The reason given by Leeds City Council that the brownfield sites are not to be developed is that remedial works would be too expensive. Should this be the case, it would suggest that these sites are heavily contaminated and pose a potential risk to human health and controlled waters. On this basis I would enquire why these sites are not being investigated as potential "Part 2A" sites. I feel it would make more sense developing the brownfield sites prior to targetting greenfield sites, as the risk and treatment of ground contamination is simply being ignored and delayed. Brownfield sites identified include but not limited to 2117, 2096, 2096A, 2096B, 2096C, 3075

Representation ID: REP01655 Question Ref: H3

Several brownfield sites as detailed earlier (namely 2096, 2096A - C, 3075' 3120, 1018A & B, 2127)

Representation ID: REP06016 Question Ref: H4

2127 – Tingley Station

4.24 This is large site currently identified in the UDP as land designated as PAS. The council have recently released selected PAS sites across the district on a phased basis.

4.25 The site is bound to the north by Green Belt, to the east by Thorpe Lane, to the south by the M62 motorway and to the west by Dewsbury Road. While the site is located to the east of Morley and to the north of West Ardsley, it is isolated and any future proposals would depend upon heavy infrastructure.

Recommendation – reclassify this site as 'red' due to the identified physical constraints

Name: Lisa Mulherin

Representor No: PRS05734

Representation ID: REP07126 Question Ref: H4

2127 Tingley Station – This would lead to the development of a whole new village unconnected to the existing settlements. Existing schools, GPs surgeries in the area could not sustain this level of development. Considerable transport improvements would be required. It ought to be Red as with neighbouring site 2099.

Representation ID: REP06434 Question Ref: H4

Site Ref: 2127 - Tingley Station

We have concerns regarding the robustness of the assessment carried out in respect of other sites, in particular that prepared for Tingley Station (Site 2127). We note that the emerging Leeds Core Strategy Publication Version 2012 includes reference to 'Protected Areas of Search Land'. Paragraph 4.8.6 confirms that the Leeds Unitary Development Plan (UDP) designated land outside of the Green Belt for unidentified needs in the future (i.e. known as Protected Areas of Search (PAS)) and that this land will provide one of the prime sources for housing allocations in the LDF.

Whilst it is accepted that PAS sites will be one of the sources for housing allocations the emerging Core Strategy confirms that the allocation of sites will depend on how well it meets the strategy for housing distribution, embodied by the criteria in Spatial Policy 6. It also states that land not appropriate for housing might be needed for employment allocations or retained as future PAS in the LDF.

It is noted that Tingley Station (Site 2127) is a defined PAS site within the UDP, although we note that Leeds City Council (LCC) sought to remove this designation as part of the UDP Review in 2006 and return the site to Green Belt. The Tingley Station site lies on the Supertram's originally planned route and this locational advantage played a significant part in its original designation as a PAS site in 2000. The adopted UDP advised that the "The site will only be considered in future at a review of the Plan and in the event that the Supertram link to Tingley is implemented or firmly committed." The Council considered, at the time of the UDP Review, that the construction of the Tingley section of the Supertram was most unlikely and that the reason for taking the land out of the Green Belt and designating it as a PAS site had effectively gone. At the time of the UDP Inquiry, the Inspector considered that it would be premature to conclude that the Tingley section of the Supertram route would never be built and that this aspect of the circumstances which led to the PAS designation had been clearly and permanently falsified justifying the sites return to Green Belt.

However, it is noted that the suitability of the Tingley Station site for housing was considered at the Leeds UDP Review Inquiry and the Inspector commented on this issue in deciding whether the site should be allocated for housing. The Inspector advised that:

"In my view the site would not be a suitable one for residential development; it is greenfield land which is not well integrated with existing communities or particularly close to local services and facilities."

The Inspector also considered whether the site should be allocated for employment uses, as part of the UDP Review. The Inspector advised that whilst PAS sites may be considered for any use if required in the long term, based on the history, character and location of Tingley Station, this indicates its suitability for employment purposes rather than for housing. The Inspector considered at the time of the UDP Review Inquiry that there was not a pressing need to allocate this site for employment use (based on the then existing supply of employment land) and that such an allocation may divert attention and investment away from the regeneration efforts at being pursued at Aire Valley Leeds.

As outlined above, draft Core Strategy Spatial Policy 1 'Location of Development' criteria (ii) confirms that settlements within the hierarchy will guide the identification of land for development including:

- a. Previously developed land and buildings within the settlement,
- b. Other suitable infill sites within the relevant settlement,
- c. Key locations identified as sustainable extensions to the relevant settlement.

We note that Tingley Station (Site 2127) is identified as a site which 'has potential to be allocated for housing', however it acknowledges that it has issues or not as favoured as green sites (i.e. sites which have greatest potential for allocation). In light of the above commentary in respect of the 2006 UDP Review and the clear policy direction under draft Spatial Policy 1, we are surprised that this site has been identified as having any potential for housing allocation. The site is clearly isolated from any of the identified urban area and given the clear lack of connections to any of existing settlements (i.e. Morley, Tingley and Middleton) it cannot be concluded that the site will form a 'sustainable extension' as required by Draft Core Strategy Spatial Policy 1.

Site Comments - Outer South West

Housing

Tingley Station

Name: The Sir Robert Ogden Partnership Ltd

Representor No: PRS05834

Representation ID: REP06542 Question Ref: H1

Site 2127

The Tingley Station site (Site Ref: 2127) has been colour coded amber, but it is maintained this site should be colour coded green.

Sites identified as amber are deemed to either have issues which need to be resolved or where they are not considered to be in such a favoured location as those highlighted in green.

A review of the more detailed individual site assessment identifies the site scores well in relation to the majority of factors considered. Highways conclude that they support the allocation of this site for housing development with mitigation to improve linkages to adjacent settlements.

West Yorkshire Ecology and the Council's Ecology officer also support the allocation of the site with mitigation to ensure the disused railway that runs through the site is retained and enhanced for its grassland and scrub habitats. The masterplan for the site shows this route is to be retained as a footpath through the site.

The detailed site assessment identifies the site is supported for allocation and issues identified can be mitigated. In this regard it is considered the site is one which has the greatest potential to be allocated for housing as the Council's conclusion that there is a lack of connection to the urban area can be addressed and as such is not an issue which needs to be resolved.

In relation to the site's connectivity, the masterplan and associated design submission document (dated February 2013) identifies the existing footpaths, bridleways, restricted byways and byways which cross through the site. The masterplan proposal seeks to include, improve and extend these existing routes.

The primary point of access to the site will be via a new roundabout on Thorpe Lane. A secondary access will be taken from the west of the site onto the A653 Dewsbury Road (North) to form a priority junction. This secondary access will be limited to pedestrians, cyclists and emergency vehicles only.

There are a number of local services and facilities within the vicinity of the site. Capitol Business Park, the White Rose Shopping Centre and Office Park, as well as primary and secondary schools are within easy walking and cycling distance of the site. Pedestrian and cycle access will be available from the A652 Dewsbury Road and the A654 Thorpe Lane, thereby maximising connectivity with the nearby retail and employment opportunities.

The site benefits from existing bus routes operating along the A653 Dewsbury Road and the A654 Thorpe Lane with frequent services to Leeds, Wakefield, Bradford, Dewsbury and the White Rose Shopping Centre. The bus stops located on the A653 Dewsbury Road are within the recommended 400 metre desirable walking distance.

The masterplan for the site has specifically sought to improve the connectivity of this site with the surrounding area. As previously stated, the site benefits from existing footpaths, bridleways and byways, which will be improved and extended. The route of the former railway line will be used to create a 'greenway' for pedestrians and cyclists, linking into the existing network and creating a walkable neighbourhood.

To the east an existing railway viaduct provides the potential to link a pedestrian and cycling route to footpaths 214 and 255 to Middleton. Both Dunningley Lane and the course of Denshaw Beck are site features that can be enhanced to promote north-south connectivity that would extend beyond the site to the north.

To the west, existing definitive footpaths leading to Morley can be linked at the Capitol Park road junction and further to the south along Dewsbury Road by the provision of a new pedestrian crossing to connect footpath 70 and footpaths 68 and 69.

To the south, access to Tingley is gained via Thorpe lane. The site access will be taken from Thorpe Lane and will therefore provide a direct route to the south of the motorway for cars, pedestrians and cyclists.

It is therefore evident from the development of a masterplan for the site and the associated design document, which draws on the conclusions of the technical supporting reports that have been prepared, the site's current lack of connectivity can be wholly addressed with routes throughout the site providing access to Morley, Capitol Park, the White Rose Shopping Centre, Middleton and Tingley.

It is therefore evident the Council has identified the site to be 'amber' as the site is deemed to be suitable for residential development but it was considered the site's lack of connectivity was an 'issue to be resolved'. The masterplan for the site ensures the site's connectivity with the surrounding residential areas, shopping and employment opportunities. The masterplan for the site and associated design document clearly identifies the site's permeability can be improved with strong connections with the surrounding residential areas and associated local services. On this basis, there are no issues to resolve and the site is one which has the greatest potential to be allocated for housing and as such should be identified as a green site.

On the basis of the evidence set out, it is maintained the site is in a wholly suitable location for development and there are no connectivity issues to resolve, the masterplan for the site demonstrates that links can be achieved to the north, east, south and west of the site. In this regard, there are no issues to resolve with the site and it is not in a less favourable location. The site should therefore be colour coded green.

2127 - Disagree should be green - see submitted rep for full details

The Tingley Station site has been demonstrated to be suitable, available, achievable and developable for residential development and as such, the allocation of this site for housing should be supported.

7.2 The Sir Robert Ogden Partnership Ltd welcomes the site being identified as a site that is suitable for housing development. However, it is maintained and supported by evidence that the site should be colour coded green rather than amber.

7.3 The Council's assessment concludes the site is suitable for allocation with appropriate mitigation, in particular the Council considered the site lacks connectivity with the surrounding settlements of Morley, Tingley and Middlethorpe. A masterplan for the site has been prepared which demonstrates that access routes can be delivered to ensure the site is well connected to these settlements.

7.4 In this regard there are no issues to resolve and as such the site should be colour coded green as it is a site which has the greatest potential to be allocated and can deliver dwellings in the short term to assist the Council in achieving a five year housing land supply, as required by the NPPF.

Representation ID: REP06542 Question Ref: H4

Site 2127

Some of the sites that have been identified as 'amber' represent sites with potential for future housing development but are sites with issues which the Council does not have sufficient information to determine whether they can be resolved.

However, there are amber sites where an issue has been identified but there is a known solution, such as in the case of Tingley Station (ref: 2127). The Council suggest there are issues to resolve in relation to the site's connectivity, but the masterplan and associated technical reports provided as part of these representations provide the Council with sufficient evidence that this issue can be addressed. On this basis, it is considered that sites should not be identified as amber solely because the Council has identified potential development constraints, due consideration should be given the ease of mitigating or resolving the issue identified.

Representation ID: REP06542 Question Ref: H4

Site 2127

The Tingley Station site has been identified as an amber site when it would be more appropriate for the site to be coded as a green, given the site has the greatest potential for allocation.

As previously stated, whilst the Council consider the site's existing lack of connection is a constraint, the masterplan for the site which has been prepared based on the findings of detailed technical supporting reports provides clear evidence the development of the site can be achieved and routes provided to link the site with the residential areas and shopping and employment opportunities to the north, east, south and west of the site. This 'issue' has therefore been addressed and as such there is no 'issue' to resolve.

The Council suggest that 4,154 dwellings can be delivered from sites they have classified as being 'green'. Based on the Council's calculation, sites to deliver 5,499 units will be required, although our evidence suggests this figure should be higher. Even on the Council's evidence, the capacity from green sites is only 4,154 dwellings and therefore 1,345 dwellings will need to be delivered from 'amber' sites in any event. However, it is maintained there is detailed evidence the Tingley Station site does not have any potential issues to resolve and therefore this site will increase the number of 'green' sites in the Outer South West area and contribute towards meeting the housing requirement in this area.

Representation ID: REP06542 Question Ref: H11

Site 2127

The Tingley Station (ref: 2127) should be developed in the short term. This site is deliverable in the short term as it is available now, it offers a suitable location for development now and is achievable, as there is a realistic prospect that housing can be delivered within five years.

Potential Education and School sites

The increased level of housing demand will put pressure on schools to accommodate more pupils and therefore there should be some consideration of potential sites for new or extensions to existing schools to ensure there is sufficient capacity for the increased number of children expected to attend schools.

Some initial suggestions are as follows;

Sites 1064A, 3467. These sites are in the Morley urban area with suggested employment use but these may be suitable sites for a new primary school particularly if other housing developments proceed in the Bruntcliffe area.

The PAS site, 2127, at Tingley Station is a large development which along with other developments on nearby on Thorpe Lane is of such a size that it should potentially include a primary school site within or nearby.

At the existing Bruntcliffe School there is some potential to expand at the rear of the current site to either expand the existing school or provide primary provision.

Site 1166 which is adjacent to the existing school at Asquith could be utilized for expansion of the school.

Representation ID: REP06876 Question Ref: H4

2127 – Tingley Station, This land is unsuitable and is required to enhance the green corridor which has funding for the development of the local environment, involving young people and local schools. Again, transport, Dr's ,safety, schools, along with the general infrastructure would have to be looked at in depth before any decisions could be made. Area within this village is required for its character and historical elements. Many of the reasons for opposing all these sites identified are based on the lack of infrastructure, schools & education, transport, safety , health & well-being, Gp's surgeries, poor links with public transport, noise, pollution and busy highways created by the increased volume of traffic. Please take all these serious matters into account and I would appreciate a briefing before any further decisions are made.

Representor No: PRS06410

Representation ID: REP07389 Question Ref: H4

Site 2127 — Tingley Station [to red]

This is large site currently identified in the UDP as land designated as PAS. The council have recently released selected PAS sites across the district on a phased basis. The site is bound to the north by Green Belt, to the east by Thorpe Lane, to the south by the M62 motorway and to the west by Dewsbury Road. While the site is located to the east of Morley and to the north of West Ardsley, it is isolated and any future proposals would depend upon heavy infrastructure.

Representation ID: REP07983 Question Ref: H4

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Amber Sites outside the Core Public Transport Network

Table 2 below contains sites that are classified as 'Sites which have potential but issues or not as favoured as green sites' but fall outside 400m of the current core bus network. Consideration needs to be given to if this site would be able to meet the LDF public transport accessibility requirements should housing be brought forward. We are minded to recommend that these site were not prioritised for housing until other more accessible site have been considered. Sites which fall marginally outside the 400m catchments and have high bus frequencies or are small low capacity sites are less of concern but are flagged up nonetheless.

Site 2127 - An unfortunate UDP PAS allocation which, if it were possible, ought to be returned to Green Belt. Amber to red.

Representation ID: REP07896 Question Ref: H4

We don't believe that the large, isolated site at Tingley Station, LDF site 2127, would be suitable for housing; it was meant to accommodate large-scale employment uses which might have appeared if a supertram route had passed on its way to a terminus nearby at Blackgates on the A650. Perhaps it shouldn't have been removed from Green Belt in the UDP; it should now be marked red against housing purposes; it might have a different LDF colour coding for another use, or might remain PAS.

Representation ID: REP07896 Question Ref: H4

Disagree with Council's amber assessment, think the site should be red

Representor No: PRS00792

Representation ID: REP02804 Question Ref: H1

2128 -

The A650 at Tingley and East Ardsley has already seen a huge increase in traffic due to large scale housing expansion and so adding more will only increase the areas problems.

A large housing development on this site, which if linked with site number 1032 would make a very large site with direct access to the A650, will only:-

i) Increase the number of vehicles on an already busy road which has many pinch points through the village caused by double sided parking which at times leads to queuing and traffic gridlock. To add to this mix traffic often is seen waiting on the road to enter the Esso/Tesco site, as predicted when opposing the planning application for the development. Accidents along this stretch are just waiting to happen and do not forget that this is a relief road for the M1 at times. The alternative road access for this site is Moor Knowl Lane which is too narrow to take further development.

ii) The primary schools are already full and proposed extensions will only address the needs of the existing population so further housing will only make a bad situation worse.

iii) Appointments at the Leigh View Medical Practice usually necessitate a 3 week wait and increasing the number of houses in the area will only make this time longer or plain impossible.

THIS SITE SHOULD NOT BE DEVELOPED AS IT WILL ADD TO THE AREAS PROBLEMS.
IT IS A SHORT TERM STATISTICAL SOLUTION WITHOUT ANY THOUGHT FOR THE LIVES OF CURRENT RESIDENTS.

Name: Denise Buckley

Representor No: PRS00795

Representation ID: REP02807 Question Ref: H1

562 / 1032 / 2128-

My main concern is the impact on the A650. You can extend the school (already underway), the doctor's surgery (3 weeks waiting time for an appointment currently) but the road cannot be improved.

Continued additions of traffic lights just lead to further congestion. Consider all the developments proposed through Morley, Tingley and into East Ardsley totalling more than 1500 homes. The road is already heavily congested not only at peak times but most of the day. Parking on both sides of the road from Woodhouse Lane to the traffic lights near Tesco is already leading to major traffic build ups. Side roads are becoming dangerous with overspill parking and sometimes customers for Room 97, the hairdressers, park on the pelican zig zag lines. The lorry ban through the centre of East Ardsley is flouted many times daily.

Large numbers of houses have been built down the Falls with more to come. This has already adversely impacted on Main Street which leads to the A650. The parking outside the school across the residents' drives already causes concern.

I suggest that the 3 developments at New Lane, Churchfields and Fall Lane are unsustainable. Brownfield sites should be used first such as the old clinic behind East Ardsley library and the special school site on Westerton Road, then small sites containing 20 to 50 houses which will be integrated easier into the community. The 350 houses proposed for Churchfields and New Lane would flood an already overcrowded village.

The A650 is a designated detour from the M1 and M62 in times of emergency. It is used by HGVs and many local horse riders. It is a main route for emergency vehicles, especially the police with the new HQ so close to us. The travelling community like to use it for trotting. It is already dangerously oversubscribed.

Looking at the overall picture of Morley there are areas which do not seem to suffer from urban sprawl eg. Gildersome.

Additional housing would overload existing infrastructure.

Proposed new development has not been coordinated with neighbouring planning authorities

Name: Janet Ward

Representor No: PRS01109

Representation ID: REP03182 Question Ref: H1

2128

Totally unsuitable to build on this site as the infrastructure cannot cope with current demands from the existing population. When there are incidents on the nearby motorways our roads immediately become gridlocked. Waiting lists for healthcare provision can be up to 3 weeks for a preferred doctor. The school is already at capacity and at school run times the roads are dangerously congested. This site is farmland and provides beautiful open space between built up areas. It is a breeding ground for skylarks and yellowhammer birds, both red listed farmland birds. Brown sites should be used first.

For the same reasons as above this land should not be developed. The roads, Main Street, Moor Knoll, A650 are all heavily congested at peak times and very busy the rest of the day. Getting out onto the A650 is a logistical nightmare. Adding to the traffic would make life unbearable and make this road very dangerous. Have these proposed developments been co-ordinated with neighbouring local authorities?

Name: A V Jarvis

Representor No: PRS01112

Representation ID: REP03164 Question Ref: H1

2128 - 48 houses - Green to Red (assumed)

Site lies between New Lane (a cul de sac entered from Moor Knoll Lane) and New Lane (a bridle way and footpath between Moor Knoll Lane and the A650 near to the traffic lights at Amblers Mill).

Comment in Site Allocations Plan Vol. 2.10 Outer South West is "no highway issues raised."

Both New Lanes exit onto Moor Knoll Lane which has poor access onto both Main Street at the end and Common Lane at the other end. Main street is very busy from the new development at Ardsley Sidings and Fall Lane (over 400 houses and the infants school which leads to excessive parking on both Main Street and Moor Knoll Lane.

The bridle way exiting onto the A650 near to the traffic lights at Amblers Mill (Country Baskets) would make more traffic problems worse at an already problem crossing.

In addition to the traffic problems this development would add to the problems of local schools which are already over subscribed.

Surely this cannot be considered sustainable with its negative impact on local residents and is contrary to aims expressed in 1.1 and 1.2 Site Allocations Plan Vol.1 Plan overview (see comment above 84237)

It would cause too much congestion on A650 and surrounding roads. There is not adequate infrastructure - schools are full, Doctor's are full. There are inadequate bus services.

Representation ID: REP03911 Question Ref: H1

1032 / 2128 -

As a group we are volunteers who represent the people who live and/or work in East Ardsley. As such we would like to express our opinions on the Local Development Framework and how it will affect the people of this area. First of all we are concerned for the loss of green belt. We have had a considerable amount of building in the area and if our remaining farm land is used for houses our children will be deprived of 'breathing space' between developments. Looking at the types of green space we can see there is very little in our Ward. We have a recreation ground, a very small children's playground and an amateur football field. The amenity green space is largely bordering alongside the railway and although we understand this is being developed as a corridor it is not open space. A large area marked as open space audit is actually a reservoir. Our largest concern is no. 1032 (greatest potential) linking with 2128 (greatest potential) — both these sites are presently farm land and if joined to 1274 & 2155 (both currently in green belt) there would be no break at all between East Ardsley, West Ardsley and Tingley and nowhere for residents to walk in countryside and breathe fresh air.

The numbers of potential houses on these sites are frightening when you look at the present infrastructure. Our local schools are full and in fact having to have work done before September to increase this year's intake. The Nursery provision at school is also full and the waiting list expanding. Site 1032 borders onto the A650 road which is very busy and a main diversion if problems occur on the M1. As Site 527 already has planning permission and is on a bend (which includes a junction) it is difficult to see where access to the site would be made. There is a weight limit on the A650 and heavy lorries often try to turn round at this point causing major hold ups. At busy times of the day the A650 is almost impossible to turn right onto now and the extra number of cars generated by these developments would make life difficult for present and future residents. As our bus services are totally inadequate now it is not even possible to say 'use public transport'.

At the present time it is difficult to get a 'non-urgent' appointment at the Doctor's Surgery. All the medical facilities (including dentists) are very stretched and with the reducing of hours the local fire station is open as well our facilities are going to be almost non-existent. Even the queues at the local chemist sometimes leave much to be desired. We understand developers have to contribute to new infrastructure before a build begins but we know from experience this doesn't always happen. When our latest build was being approved we were promised a doctor's surgery, a chemist and a small supermarket but although the 400 houses are mostly complete (although not totally sold out) no amenities have appeared. Also if a new school and health centre had to be built, using some of the land marked for houses there would be no room for all the houses now deemed so necessary.

Drainage in the village has often been inadequate and flooding can occur. This would surely be worse when fields are replaced by concrete roads and streets. As you will appreciate we are very concerned that our 'village' will become part of a sprawl of houses and will lose the character we are used to and love. We will be grateful if you take these points into consideration when approving the finished development plan and we much appreciate 1032 being taken out of 'greatest potential' if at all possible.

Representation ID: REP00939 Question Ref: H5

1032, 2128, 2155, 1143F - All schools are full and Doctor's also full. Not enough open space in village. The houses built in the village in recent years have not all been sold so do not consider more are needed in the near future.

Representation ID: REP00939 Question Ref: H2

1032 and 2128 - No space between villages would be left - all green space filled. The main reason is lack of infrastructure - schools all full, Doctor's full, roads full. A650 not suitable for further traffic and there is inadequate public transport.

2128 – This site is adjacent to green belt land and is accessed by two public footpaths / bridleways.

Representation ID: REP04315 Question Ref: H2

2128 – This site is adjacent to green belt land. It also banks onto a public footpath. As far as I see from the map access to this site would mean getting rid of the public foot / bridleway. 48 houses would also create a lot of traffic onto Moor Knoll Lane, which is not very wide and has a dangerous bend. It is also part of a bus route which could cause problems.

Name: Eric Smith

Representor No: PRS02147

Representation ID: REP04370 Question Ref: H1

1032 / 2128 [this is assumed, respondent wrote 2228 but this isn't a site.. 2128 and 1032 are joined] –

I am a totally blind guide dog owner (as is my wife). We currently have two guide dogs and two retired guide dogs in our house, nearby the mentioned sites. We have been trained to use the proposed site for free running our dogs. You can imagine that two blind people and four dogs is not easy to manage anyway, but building on this site will make it virtually impossible to take them for a walk.

When we chose a location to buy a house, we considered local facilities, the local area spaces and how many people resided in the area; as a blind couple (close to retirement) who have guide dogs, these considerations were vital. With the changes proposed, we would be unable to cope getting around the village, using amenities and using our guide dogs. These changes would make us feel it is impossible to live here. Guide dogs association consider our local area before allocating us with our dogs, they may not find the new locality suitable for the dogs we already have. The general pressure on local infrastructure is already bursting at the seams in East Ardsley, e.g on the roads Moor Knoll Lane, Bradford Road (A650) and Common Lane are always traffic jammed. Also, local families can't find spaces in local primary and secondary schools. Getting a doctor's appointment can take up to four weeks. By bringing in a further 500 households I think life in East Ardsley will become unbearable.

Name: Anita Rose

Representor No: PRS02157

Representation ID: REP04381 Question Ref: H1

1032 / 2128 –

East Ardsley school is full and Thorpe too, and not big enough to take more children.

The roads in and around the building sites (Church fields) are too busy with traffic – in and out of the village and using the main Bradford Road which has many queues daily at school times and from motorway closures. Children in Ardsley and Thorpe have already to travel to other schools as they can't get in at their nearest.

Building on these sites will devalue my home having a building site at its doorstep and I don't want to live next to a noisy dusty building site for a number of years to come. With only a view of scaffolding, wagons and more houses which over the years has made my home feel surrounded and boxed in by previous builds.

Building work on the railway sidings in East Ardsley is still underway with still many more houses there to come which are not selling very well and progress is slow. Why build more when sites are still on going and not finished. Also on these sites we were promised a doctors surgery, a public house, a day care nursery, shops but haven't been given any of these only houses where people have no facilities and have to travel by car making the village busier for everything they need, e.g. shops, school, doctors.

2128 – New Lane

More houses on this site will mean more cars. Traffic is already congested and the village school is already oversubscribed. My neighbour's children have to drive to another school that is a few miles away. There is only one medical facility to cover a few villages. It can take a few weeks to get to see a doctor. Traffic on Fall Lane is already like a race course. I'm surprised no one has been killed yet. The Speed limit is 30 mph but cars are much faster. The roads here were built for smaller communities not for large estates.

Please read comments for the Church Fields site as above, as they are the exact same reasons for also not building on New Lane. I would also be very interested to know what percentage of new houses are being built and have been built over the last 30 years in South Leeds compared to North Leeds where the richer people live including you councillors.

Representation ID: REP05655 Question Ref: H7

SITE NUMBERS 1032 Church Fields and 2128 New Lane East Ardsley

I am writing to complain about the above sites being given planning permission. There is absolutely no more room in schools in East Ardsley for any more people living here, saying you will put money aside as from 2014 is a complete joke, just like the previous planning permission that was allowed on Buckthornes in East Ardsley telling people that old peoples bungalows will be built there?? when did that ever happen?? Just like the joke that is the community centre that knocked down the Old Mans Shelter (a meeting up place for the elderly) that was supposed to have a Sports Centre built there instead. You as a council are not trusted at all by the people of East Ardsley/Tingley. There are also no room at the Doctors, having to wait 2 weeks to get an appointment is outrageous and how bad will it get with God knows how many more people living here. Not to mention it is Green Belt Land, without a place for nature to live then there will be no nature. The people of East Ardsley would like to be told what percentage of land is being given planning permission in South Leeds compared to North Leeds, Im sure you are all familiar with North Leeds, its where you and the rich all live. The council needs to start listening to what people have to say rather than lining their own pockets and looking out for themselves.

I live in [x] and am absolutely disgusted with Leeds County Council as a whole.

Name: Trevor Sherborne

Representor No: PRS02724

Representation ID: REP05437 Question Ref: H1

If both these sites go ahead where is all the infrastructure to go with them. Schools are full in the area. There is queueing traffic on the A650. These sites will bring another 300 to 500 more vehicles to the area. It will increasa in pollution. We have enough pollution in the area with M1, M62 and the A650 without this extra traffic. I note that Highways should spend some time in the area to see the real problems, not just those on paper. There are also public rights of way across these sites. These are greenfield sites

Name: Richard Ward

1079, 1072, 1077, 1143B, 1143D, 1171B, 1200A, 1258, 1284a, 1285, 1344, 2098a, 3365, 3456A. All these sites are green belt sites, green belt land is there to stop urban sprawl and the destruction of the countryside that still remains in this area. If sites 1143B, 1143D, 1143F, 2155, 1274, 1032, and 2128 are built on East Ardsley West Ardsley and Tingley will just become one built up area hemmed in by the M62. Not all of these are greenbelt sites but if the development is allowed the basic principal of having greenbelt in this area will be completely wrecked!

Representation ID: REP01655 Question Ref: H1

With numerous disused brownfield sites within the "outer south west" area it seems unbelievable that consideration is being given to the development of greenfield sites. The reason given by Leeds City Council that the brownfield sites are not to be developed is that remedial works would be too expensive. Should this be the case, it would suggest that these sites are heavily contaminated and pose a potential risk to human health and controlled waters. On this basis I would enquire why these sites are not being investigated as potential "Part 2A" sites. I feel it would make more sense developing the brownfield sites prior to targetting greenfield sites, as the risk and treatment of ground contamination is simply being ignored and delayed. Brownfield sites identified include but not limited to 2117, 2096, 2096A, 2096B, 2096C, 3075

Representation ID: REP01655 Question Ref: H5

1032 and 2128. as detailed earlier existing infrastructure, more specifically highways (Bradford Road), would not be able to support an increase in the volume of traffic.

Representation ID: REP01655 Question Ref: H2

1032, 2128, both located within East Ardsley Existing local infrastructure, including highways, could not support the development of these areas for residential end-use. Bradford Road, between the M62 and M1 junctions, during peak times is often busy and grid locked due to the volume of traffic. The introduction of more residential properties within this area would simply worsen this situation.

Representation ID: REP01267 Question Ref: H9

YesSite ref 1032 - Fields off Bradford Road, East ArdsleySuggested change - green to redReason - The current infrastructure in East Ardsley already cannot cope with the current population. The school is already full, with siblings of existing pupils already unable to gain a place at the same school. Local doctors surgeries no longer accept new patients from East Ardsley. The A650 Bradford Road already struggles to cope with the volume of traffic, with regular lengthy queues at various traffic lights in and around East Ardsley, which are particularly bad during morning and afternoon rush hours. Traffic actually grinds to a halt on the A650 when there are problems on the nearby motorway networks causing traffic to divert to avoid motorway delays. Further development would mean that there is strong likelihood that the current infrastructure would collapse under the pressure of an increase in population and traffic. In the case of this site specifically, access via New Lane would be impractical and potentially illegal as there is a footpath between this site and New Lane which must not be crossed by a road. New Lane is not capable of supporting any increase in the volume of traffic. The road surface is in very poor condition with a number of recurring potholes requiring regular attention. New Lane is already significantly narrowed by multiple vehicles parked on the roadside, this is already a hazard, hindering access for the emergency services to properties and people at the far end of New Lane.Site ref 2128 - Field adjacent to New Lane, East ArdsleySuggested change - green to redReason - The current infrastructure in East Ardsley already cannot cope with the current population. The school is already full, with siblings of existing pupils already unable to gain a place at the same school. Local doctors surgeries no longer accept new patients from East Ardsley. Representation ID: REP00768 Question Ref: H1

Many of the sites are in the Ardsley area. While I agree there is undeveloped land here which may be suitable for housing, there are a number of infrastructure problems in the area which would need to be looked at first before any further housing was built.

Representation ID: REP00768 Question Ref: H2

1032, 2128,1143D, 143B stand out. All these sites would need access onto the A650. This road is already congested at peak times and very busy for much of the day. Any increase in traffic due to further residential development would only create more problems for existing residents. Another point which also has implications for the volume of traffic, is that schools in the area are full. Parents have to travel further with their children, often in their cars, adding to the congestion and making the areas around the schools quite dangerous. The roads around East Ardsley and Westerton Primary schools are an obstacle course at school finishing times. Certain other spots are also a problem at times, for example the approach to the Esso filling station/Tesco store.In addition to my concerns about traffic, the medical practice at Leigh View does not seem to be coping with present demands. Although one can usually get a short appointment within a reasonable time, with a duty doctor, the waiting time for a longer appointment, particularly with a doctor of your choice, can be two weeks or more. Nor are there any NHS dental services in the immediate area.

Numbers 527, 1032 and 2128 The Tesco is not a big enough site for the amount of vehicles which use it, causing queues out onto the main road, cars also park on Bradford Road, Cherry Tree Walk, Woodlands and Brayshaw Road near to the junctions making it extremely difficult to navigate these areas safely, either in a vehicle or on foot. To compound this problem there is a bus stop outside the Tesco and one directly across the road. Cherry Tree Walk is already used as a shortcut in both directions building more houses in these areas will only increase the amount of traffic adding to these issues. I know it is not in the Leeds area but there is a large development of Police buildings under construction at Carr Gate JN41 which will also increase the traffic flow! I realise that the houses need to be built somewhere and I don't really have issue with this, BUT it is essential that before planning is approved the roads and problems are looked at and solutions put in place. I have not even mentioned the problems which more people will cause with the Doctors, Dentists and Schools who are already struggling to cope.

My main concern relates to the available schooling for all these new families. I have a pre-school child and am already concerned that she might not get in to the local primary school (East Ardsley) due to high-demand - this became apparent in March of this year (2013) when we were told that there weren't enough nursery places and that she would have to wait until September 2013 and then she still might not get one. I am aware of plans to extend East Ardsley Primary school but this is to accommodate the current demand never mind the addition of the proposed developments (specifically 1032 and 2128). If there was more consideration to schooling within the area then these site would be more appealing to existing residents

Representation ID: REP01576 Question Ref: H6

Sites 1032 and 2128 should of been amber instead of green (same reason as questions H5 above)

Representation ID: REP01576 Question Ref: H2

Sites 2128 and 1032. Adding housing to this particular part of East Ardsley would have a considerable impact on the available schools. I am aware that East Ardsley Primary school is already expanding yet this is to accommodate the current population and therefore the addition of extra housing without any plans to build another school is quite frankly apauling

Representation ID: REP01206 Question Ref: H2

Sites 1032 and 2128The local community is already struggling in terms of essential services due to existing over crowding. The present infrastructure is way beyond full capacity. It would be ludicrous and furthermore completely unacceptable to even think of building any houses on these two sites.I feel the way this has been conducted is underhanded and somewhat insidious since no real consideration has been given to the disruption this would cause or the feelings of the local community. The existing overcrowding is already causing extremely long delays for GP appointments with many patients having to wait two to three weeks to see a doctor. More people equals longer waits.Traffic is also a significant problem and Bradford Road has become more dangerous than it used to be with the increased volume of cars. Building homes on site 1032 and site 2128 would be irresponsible and reckless and potentially put lives at risk.A disturbing fact is that there are other sites around South Leeds which could be used for new homes as well as sites in North Leeds. It seems rather discriminatory that it's only South Leeds which has been targeted with such an unpleasant proposal. All these new homes will undoubtedly attract an element of noise and crime which will severely impose on the quality of life which most of us have enjoyed for over 30 years.This is a development which CANNOT be allowed to materialise!

Representation ID: REP05660 Question Ref: H1

I along with my family live at 88 forsythia Avenue, East Ardsley and I write to you with real concerns around the proposed development of Church field off the A650 and fields off Old New Lane as part of the LDF.

I do not believe the plans for these green fields sites are suitable or sustainable.

Traffic on the A650 is already very heavy and it is some times very difficult to pull out from Cherry tree and other roads off the A650. With another 500 homes planned for Church field alone this is going to make this situation even worse. The A650 is often used as rat run when there is an accident on the M62 or M1 resulting in the complete deadlock of the road.

The rain water run off for Church field is into Old New Lane, the position of our house could be detrimentally affected if Church field is covered in concrete as our house is below that of the field.

The fire service has been in attendance due to flooding on Moor Knoll Lane as a result of this run off. This has resulted in the closure of Moor Knoll Lane.

The local schools are already at capacity so most certainly do not have the capacity to cope with additional demand that is sure to result from the building of these homes.

The public transport for East Ardsley is appalling leaving residents with no alternative but to use their cars meaning more traffic on the local roads.

Driving around Morley you don't have to look hard to see more suitable sites that are brown rather than green field. Timber Tops, a property that resides on Forsythia Avenue is a prime example of this. It is a brown field site prime for development but has sat derelict since we moved here 7 Years ago.

The proposed new development has not been coordinated with neighbouring local authorities.

Our children will be the ones who will inherit this legacy of build build build and once we have built on these green sites it will be impossible to turn back the clock. We are going to end up with super cities with no green divide between different populations. Also, due to the high density of these new developments they are not going to be pleasant environments to live in.

Ultimately I do not believe the reason given for the development. I don't believe that there is not enough homes already out there when there is a quoted 500k empty homes left abandoned around the country. I believe this is a way government can keep the building industry moving.

I fear that we are at some time in the future going to end up with ghost estates which are left abandoned because the supposed demand is not actually there.

Green to red. Additional housing would overload existing infrastructure. Proposed new development has not been coordinated with neighbouring planning authorities.

With regards to two potential planning applications for new housing on plots of land to the rear of my property. We believe this would significantly destroy a large area of land and wildlife, decrease the value of our property due to restricted views which are currently interrupted views across the fields to the rear of our property, and increase unnecessary burden to existing infrastructure in this area. There is currently too much residential housing in proportion to the amount of local amenities available. If this housing application went ahead, we would rather move out of the area as I am sure most other residents would.

Housing

New Lane, East Ardsley

Name: Taylor Wimpey

Representor No: PRS05758

Representation ID: REP07282 Question Ref: H1

2128 – New Lane, East Ardsley

We support the rating of site 2128, New Lane, East Ardsley as green. We believe that the site should be allocated for housing in the Site Allocations Plan. Taylor Wimpey are committed to delivering housing on this site. The site comprises of five fields to the north of residential development on New Lane and to the west of Moor Knoll Lane. The site is generally flat with trees acting as field boundaries throughout the site. It is currently designated as Protected Area of Search in the Leeds UDPR. The surrounding land uses are residential to the south and agricultural to the west, north and east beyond Moor Knoll Lane. Part of the northern boundary of the site abuts Sharp Business Systems offices which are located off Moor Knoll Lane. The site is on the outer north western edge of East Ardsley. In terms of local services, there is a Co-operative store 750m from the site, and a Post Office 650m from the site. There are also community facilities in East Ardsley including a Library 700m from the site and recreation ground 300m from the site and local churches. There are two main pubs in East Ardsley, The Bay Horse and The Bedford Arms along with Working Men's Clubs. The nearest large supermarket is Sainsburys at the White Rose Centre, 3.8km away and ADSA, 9km away.

The site has good access to public transport, education and local health facilities. The site is approximately 4.1 km away from Morley Train Station, where there are services to Leeds, Huddersfield and Manchester Victoria. Outwood Train Station is also 2.4km away, which is on the Wakefield line and offers services to Leeds, Doncaster and Sheffield.

Bus stops are located on Moor Knoll Lane on the eastern edge of the site where the following services can be accessed:

- 85 – Bramley Shopping Centre to Morley Town Hall via Leeds every hour
- 153 – Morley Town Hall to Castleford Bus Station via Rothwell every hour
- 481 – Leeds City Bus Station to Wakefield Bus Station every hour

This site offers excellent access to the motorway network, it lying in between M1 Junction 41 (1.3km away), M62 Junction 28 (2.4km away) and M62 Junction 29 (1.9km away).

This site is well placed to access local educational facilities. The nearest Primary Schools are East Ardsley Primary School which is 470m away, Blackgates Primary School which is 1.6km away and Thorpe Primary School, 1.3m away. The nearest Secondary Schools are Outwood Grange Academy which is 2.8km away and Woodkirk Academy which is 2.9km away.

With regard to health facilities; the closest is East Ardsley Health Centre, which is approximately 650m from the site followed by Leigh View Medical Practice which is 1.1km away. The closest dental surgery is The Dental Studio and is 800m away, followed by Lingwell Croft Surgery and Boyds Dental Practice both in Middleton. There are two opticians within 700m of the site along Bradford Road and a chemist 1.1km up Bradford Road.

The site is close to the "Strategic Location for Jobs Growth (1000 + FTE jobs)" as identified in the draft Core Strategy which is approximately 2.4km away at Junction 28 of the M62. This strategic area for jobs growth needs to be matched with new housing in easily accessible locations. This site off New Lane and Moor Knoll Lane can already access J28 of the M62 easily using regular local bus services, therefore this site provides an ideal location for housing growth. The site is 1.9km away from a wide range of job opportunities at the Junction 41 Business Park.

[Representation sets out Core Strategy policies].

This site is designated as Protected Area of Search for long term development in the Leeds UDP Review (2006). The housing distribution by housing market characteristic area for Outer South West is 7,200 which is 11% of the total housing requirement for the Leeds district. The Outer South West housing market contains the major settlement of Morley and smaller settlements of Drighlington, East Ardsley, Gildersome and Tingley/West Ardsley. Therefore it can be expected that those sites located closest to the existing services and facilities in these settlements will be allocated to meet this housing requirement.

In Outer South West the Draft Core Strategy apportion 7,200 dwellings as being required throughout the plan period. Regardless of our objections to the overall housing requirement, Outer South West has outstanding permissions and allocations equating to 1,398 dwellings, this is only 19% of the requirement. The total number of 'Green' sites in this housing market area has a capacity for 4,214 dwellings, some 58% of the requirement. Based on this, it is clear that the Council will need to allocate all the identified 'Green' sites in the Outer South West market area in order to achieve the dwelling requirement.

The allocation of this site for housing development is consistent with the adopted National Planning Policy Framework. [Representation sets out NPPF policy]. The development of the site is consistent with these objectives.

Conclusions

The site has the potential to deliver circa 100 dwellings, given its site size of 3.8ha. We question the indicative capacity in the Council's SHLAA, which refers to a site capacity of 48 units. The site is deliverable when considered against the definition of deliverable in the Framework (footnote 11 of paragraph 47). The site has a strong likelihood of early delivery as Taylor Wimpey have agreed promotional terms with a number of the landowners. The site is available, achievable and developable in the short term. In terms of the site being suitable, there are no physical problems or limitations such as access, infrastructure, ground conditions, flood risk, hazard risks, pollution or contamination and as such, the site is considered to be suitable for housing. With regard to availability, Taylor Wimpey have a number of agreements in place with the landowners and understand all owners are keen to develop. In terms of delivery, detailed technical assessments relating to the site have been undertaken and there are no viability issues pertaining to bringing the site forward. There are a number of social, economic and environmental benefits that could arise from the development of this site. These include:

- Delivery of new housing of a mix to meet local needs including affordable housing
- New public open space
- Direct and indirect construction jobs
- S106 money towards local infrastructure
- New Homes Bonus
- Increased expenditure into the local economy

The site is well contained with strong connections to the urban area and is an ideal candidate for a housing allocation. The Outer South West housing market area has the capacity for further housing growth and sites such as this which is close to local facilities, services and public transport will be necessary to be allocated for housing development in order to meet the housing requirements for this housing market area. It is considered that the development of this site would constitute sustainable development with no significant adverse impact and a range of benefits. Therefore for the reasons set out above we support the housing allocation of site reference 2128 land at New Lane, East Ardsley.

Housing

New Lane, East Ardsley

Name: Karen Renshaw

Representor No: PRS06048

Representation ID: REP06876 Question Ref: H1

2128 – New Lane, East Ardsley. This development for 48 properties would create a ratrun ,along with dangerous highways and once again, no school places. Some of the land is currently used to keep horses and therefore the animal welfare would suffer as a consequence of this development you are proposing.. The access point would cross with industrial access/delivery and the village identity would become a blur and the open environment which once was would been seen to be disappearing.. Too condensed and no school places available within this side of the city . This would take away the country walks and the opportunities for residents to walk to areas locally. This route/site is used by blind and disabled residents within the village which would lose its local character .

Many of the reasons for opposing all these sites identified are based on the lack of infrastructure, schools & education, transport, safety , health & well-being, Gp's surgeries, poor links with public transport, noise, pollution and busy highways created by the increased volume of traffic. Please take all these serious matters into account and I would appreciate a briefing before any further decisions are made.

ref no. 1032 Church Fields and 2128 New Lane.

I don't think Moor Knoll Lane could cope with extra traffic as it stands (is it only me that meets double decker buses on the corners) I don't know what route could be considered, as Bradford road is very busy at rush hour. This is making a small village more congested. Has anyone contacted Wakefield council regarding proposed plans off the A650 near Burger King, which will also add more traffic feeding up Bradford Road through our village

Representation ID: REP06444 Question Ref: H1

ref no. 1032 Church Fields and 2128 New Lane.

I don't think Moor Knoll Lane could cope with extra traffic as it stands (is it only me that meets double decker buses on the corners) I don't know what route could be considered, as Bradford road is very busy at rush hour. This is making a small village more congested. Has anyone contacted Wakefield council regarding proposed plans off the A650 near Burger King, which will also add more traffic feeding up Bradford Road through our village.

Name: Julie Woodcock

Representor No: PRS06155

Representation ID: REP07035 Question Ref: H1

Dear sirs

i would like to raise a complaint regarding the house's on the above sites, there are no places in the schools they are all full
the doctors is over full and no apt are to be had for 2 weeks and the traffic build up on the Bradford road is excessive
it is also green belt land.

I would also be interested to know what percentage of housing is being built in South Leeds as opposed to North West and East Leeds.

I would also like to know what you will be doing about the Falls Lane Bridge in East Ardsley which is dangerous.

I will await your response,

Name: Paul Rg Haley

Representor No: PRS06480

Representation ID: REP07608 Question Ref: H1

Ref sites 1032 and 2128, land off Bradford Road and New Lane, East Ardsley

Additional housing would overload existing infrastructure. Proposed new development has not been co-ordinated with neighbouring planning authorities.

Representor No: PRS06750

Representation ID: REP07983 Question Ref: H1

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Green Sites outside the Core Public Transport Network

Table 1 below contains sites that are classified as 'Sites which have potential to be allocated for housing' but fall outside 400m of the current core bus network. Consideration needs to be given to if these sites would be able to meet the LDF public transport accessibility requirements should housing be brought forward. Significant developer contributions will be required at these sites to improve the public transport to meet the council LDF accessibility policies; particularly in the larger sites should these be brought forward for development. These include SHLAA ref: 2062, 1032, 1046, 1017 & 1055.

Sites which fall marginally outside the 400m catchments and have high bus frequencies or are small sites low capacity are less of concern but are flagged up nonetheless.

The table also includes accessibility assessments results to access other services and facilities within acceptable journey times on public transport.

[see table in full representation submitted which lists sites]

Name: Glennis Haigh

Representor No: PRS01748

Representation ID: REP00939 Question Ref: H4

2155 and 1274 - if linked with green sites it would make the whole area built up and unacceptable. No farming fields left in the village.

Representation ID: REP03911 Question Ref: H4

Our largest concern is no. 1032 (greatest potential) linking with 2128 (greatest potential) — both these sites are presently farm land and if joined to 1274 & 2155 (both currently in green belt) there would be no break at all between East Ardsley, West Ardsley and Tingley and nowhere for residents to walk in countryside and breath fresh air

Representation ID: REP00939 Question Ref: H5

1032, 2128, 2155, 1143F - All schools are full and Doctor's also full. Not enough open space in village. The houses built in the village in recent years have not all been sold so do not consider more are needed in the near future.

Name: Caroline Proctor

Representor No: PRS02096

Representation ID: REP04315 Question Ref: H5

2155 – As this is a green belt site it shouldn't be built on and should be coded red. This land is currently used for agricultural purposes. 246 houses would have a great impact on Common Lane and access to the site would be dangerous. Common Lane does not have the capacity to cope with all this extra traffic. There could also be drainage issues with this site.

Representation ID: REP04315 Question Ref: H9

2155 – As this is green belt land it should be protected and not considered for building on.

Representation ID: REP05168 Question Ref: H4

All roads lead to the A650. This is a very busy road with traffic queing at peak times. My concerns are for the extra amount of traffic generated by building approx 600 more houses in the area. I would like the air quality, noise levels and pollution caused by excessive traffic to be considered. Also schools, doctors etc in the local area are full so further extensions to these areas will be required

Name: Trevor Sherborne

Representor No: PRS02724

Representation ID: REP05437 Question Ref: H4

2155, 1274, 1143F. Again no schools, long waiting times at doctors. Has anyone from Highways been out to see the problems with the roads near these sites. Common Lane has vehicles, in some places, parked on both sides of the road. I have to come out onto common Lane from The Grove and now it is hazardous without introducing the large amount of traffic these sites will generate. Again we will be loosing Greenfield sites and increasing pollution into the area with traffic pollution. We have enough pollution in the area from the M1, M62, and A650. Also what about the loss of wildlife in the area

Representation ID: REP01267 Question Ref: H5

Site ref 1274Reason - The current infrastructure in East Ardsley already cannot cope with the current population. The school is already full, with siblings of existing pupils already unable to gain a place at the same school. Local doctors surgeries no longer accept new patients from East Ardsley. The A650 Bradford Road already struggles to cope with the volume of traffic, with regular lengthy queues at various traffic lights in and around East Ardsley, which are particularly bad during morning and afternoon rush hours. Traffic actually grinds to a halt on the A650 when there are problems on the nearby motorway networks causing traffic to divert to avoid motorway delays. Further development would mean that there is strong likelihood that the current infrastructure would collapse under the pressure of an increase in population and traffic. Representation ID: REP05686 Question Ref: H4

I would like to log my objection to the planned housing developments 1032 and 2125/2155. I live on New lane, not the one shown on the map as New lane right through from Bradford Road which is in fact a dirt road that was used for transporting coal from the old pit to the mill, but the one that is a dead end up to the fields concerned. We have had many developments in our area and this has caused many problems for the residents ie. schools are too small, it took me nearly five weeks to see my doctor which are stretched to their limit even though they, like the schools have expanded. As a village we had 2 butchers, 4 shops, newsagents, 2 chemists, dentist, doctors and 2 post offices. We now have 1 shop plus a Tesco at the petrol station, 1 post office, no chemist, no doctors, no dentist (unless you go private) and things surely cannot go on. There is no mention of any of these amenities being provided unless I have missed it, it's just houses, houses and more houses. After you approved the Appletree Court at the back of my house our garden flooded and still does in bad weather, also killing all my fruit trees as the soil was so wet. The New lane (that isn't) development suffers these problems even to the point of there being ducks swimming so not exactly good building land. Please give us a break and let the amenities we have the time to catch up or provide them.

Representation ID: REP06563 Question Ref: H4

Suggested sites from Amber to Red;

309
1067B
1069
1143F
1220A
1274
1275A
1279
1332
2105
2155
3000
3064
3078A
4004

These sites are almost all located within the existing Green Belt and expansion into the Green Belt would lead to increased urban sprawl between the various townships in the Outer South West, and lead to coalescence between communities

Development of the Green Belt sites would also reduce the open green area and provide encroachment into the countryside around Morley and other smaller townships.

In addition there is insufficient road capacity and little scope for expansion for other necessary services. There would be a requirement for new or upgrading of existing roads which would therefore favour development on sites that are already located within the Morley or the Leeds Urban areas rather than eroding the Green Belt further.

Site 3078A is close to potential development in Kirklees and could lead to the complete erosion of the Green Belt and open green space between Leeds and Kirklees.

Any further development at sites 1275A and 1279 would reduce the Green Belt between the existing residential boundary and the A653 Dewsbury Road to a narrow strip which would put pressure in future years to extend residential use further east.

See rep for full details.

2155 – South of Ardsley Common. This is valued green belt land and needs to be retained in that way. Ardsley has had many new developments within the last 5 years. Development on this site would take character from the village and its boundary territorial community element.

Many of the reasons for opposing all these sites identified are based on the lack of infrastructure, schools & education, transport, safety, health & well-being, Gp's surgeries, poor links with public transport, noise, pollution and busy highways created by the increased volume of traffic. Please take all these serious matters into account and I would appreciate a briefing before any further decisions are made.

Representation ID: REP07480 Question Ref: H4

Leeds Site Allocations Plan- Issues and Options
Land to the south of Common Lane, Tingley

We act on behalf of Hanover Developments (Wakefield) Ltd who have an interest in land to the south of Common Lane, Tingley. The site has been assessed as part of the first stage of work completed by the Council on the Sites Allocation Plan and is known as 2155 and 1274.

Our clients have previously instructed a number of consultants to submit reports assessing the suitability of the site to be brought forward for residential development. These include the following:

- Environmental Report (Wardell Armstrong) submitted 12th October 2012
- Ecology Report (Wardell Armstrong) submitted 12th October 2012
- Site Development Document (JRP Associates) submitted 21st March 2013

Hanover Developments (Wakefield) Ltd have also instructed the following consultants to produce reports assessing the suitability of the site to be brought forward for residential development as follows and enclosed:

- Transport Assessment (Optima) dated April 2013
- Bat Survey (Wardell Armstrong) June 2013

The reports have been carried out as if sites 2155 and 1274 are one comprehensive site and this is how the Council should be assessing them.

It is noted in the site specific assessment (within Volume 2— 10 Outer South West) that the site has been suggested as a site which "has potential but there may be issues which need to be resolved or the site may not be in such a location as those highlighted in green". Specifically, highways concerns about accessibility and access provision are raised. As you will now see, Hanover Developments (Wakefield) Ltd have commissioned a Transport Assessment which concludes that there are no reasons or transport grounds why the development of the site should not be included within the Site Allocations Plan for residential purposes.

Through the body of work provided in support of the residential allocation of the site, it is requested that the scoring of the site is upgraded to 'green' and allocated as a residential site.

The work undertaken by Wardell Armstrong has also highlighted the potential of the site to deliver a heat recovery system from the existing mine water. Wardell Armstrong have experience in projects of this nature and have advised Hanover Developments (Wakefield) Ltd that this is something that is a very distinct and practical possibility at this site. Clearly if the site is selected as a housing site, this would be a clear benefit that would also meet with the sustainability credentials of the plan and meet the terms of the National Planning Policy Framework.

We consider that the work provided to date gives a clear indication that there are no constraints to development and that the site should be allocated a housing site.

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Amber Sites outside the Core Public Transport Network

Table 2 below contains sites that are classified as 'Sites which have potential but issues or not as favoured as green sites' but fall outside 400m of the current core bus network. Consideration needs to be given to if this site would be able to meet the LDF public transport accessibility requirements should housing be brought forward. We are be minded to recommend that these site were not prioritised for housing until other more accessible site have been considered. Sites which fall marginally outside the 400m catchments and have high bus frequencies or are small low capacity sites are less of concern but are flagged up nonetheless.

Housing

Broad Oaks Farm, Churwell

Name: Jean Douglas

Representor No: PRS02400

Representation ID: REP04654 Question Ref: H7

Since moving to Churwell 46 years ago, the various builds – especially the extensive westwood and new village developments – have overwhelmed our single main road village.

-Utilities have constantly been under pressure, as has Churwell School and just one Doctor's surgery.

-The A643, Elland Road is our village's sole access to and from Leeds. Crawling tail backs are a regular feature, even more so since "The New Village Project was Allowed.

-Further proposed housing for Churwell in excess of 1,400 dwellings will be absolutely disastrous as far as roads, transport, education, health and welfare services are concerned. All of these are already stretched in Churwell.

-Green Belt Land is involved which is against government guidelines and policy.

I. Object particularly to the three larger proposed developments

(a) Land at Hepworth Avenue (261) and Hepworth 2#(80) = 341 Dwellings

(b) Land at South of Wood View= 471 Dwellings

(c) Land at Broad Oaks Farm = 251 Dwellings

(i) All the dwellings of (a) and (b) and (c) will except use of Elland Road (A643) to go to Morley and beyond or to the Leeds Ring Road and beyond. The road will not cope provide a satisfactory transport route expected and required by motorists in order to get to work and go about their businesses timeously.

(ii) Utilities – stretched at present – would face perilous pressure.

(iii) Insufficient dental facilities already.

(iv) Insufficient medical facilities already.

(v) No Multi- facility health centre at all.

(vi) Churwell School will not cope with such potential child increases.

(vi) Churwell School will not cope with such potential child increases.

The current shortages in items (iii) to (vi) cause unwelcome pressures on our Morley neighbouring Town's School, Doctor's, Health Clinic Services, Dentists and Welfare facilities. These services may be savagely curtailed if other proposals in the Outer South West Area cause Morley's spare capacities for Churwell to start sinking with additional loads and pressures.

I Object to any potential planning agreements in the above Developments (a)and(b)and(c) Which involves Green belt land instead of priority brownfield sites aimed to help resolve the House shortage problems.

It seems futile to waste expense on further applications from Developers when reports show and apparent 20,000 properties which have already been granted planning permission across Leeds and mainly on Brownfield sites – but which Developers appear to have decided not to Develop, speedy completion of 20,000 would certainly help the shortages. It should be especially on Green belt, may be considered. Local Authorities are aware that Developments on Greenfield sites can only happen in exceptional circumstances this has been pointed out by the Planning Minister, Nick Boles, he has plainly indicated that Local Authorities will need exceptional circumstances and will need to undertake extensive consultations with rate-paying communities, (not interloping Developer's) if any support is to be gained for any proposed local changes or compromises concerning Green Belt Land.

I Object to any potential overloading of our Infrastructure.

I will expect the Local Planning Department, which is employed to work on my behalf to insist that the Development framework must have a guaranteed current and guaranteed proposed forward plan to deal with our existing breaking infrastructure. Crisis management and urgent consultations hoping that "solutions will turn up" must be minimalised, if not extinguished, before considering any future proposals which would exacerbate current problems and allow any area services to further struggle or fail.

I trust you will take these few objectional points on board when going through to the next phase of proceedings.

Housing

Broad Oaks Farm, Churwell

Name: Persimmon Homes

Representor No: PRS05691

Representation ID: REP06894 Question Ref: H7

Sites 1220B and 2164

Persimmon Homes does not agree with the red assessment of the sites.

The basis of the Council's red rating is the sites location within the Green Belt and concerns about its isolation and access requirements. In reality, this site will come forward as a comprehensive masterplan with Sites 1282, 1283, 3068 and 1220A and will be a later phase once the requisite access infrastructure has been put in place.

Check the unrestricted sprawl of large built up areas.

The sprawl of Morley will be maintained by the railway line to the east. This is a defensible boundary and will, therefore, maintain separation between Morley and Middleton.

Prevent neighbouring towns from merging into one another.

The merging of Morley and Middleton will be prevented by the railway line to the east. This is a defensible boundary and will, therefore, maintain separation between Morley and Middleton.

Safeguarding the countryside from encroachment

Encroachment into the countryside will be restricted by the railway line.

Preserve the setting and special character of historic towns

Land south of Wood View and Broad Oak Farm do not contribute to the setting and special character of a historic town.

Assist urban regeneration

Releasing this site from the Green Belt for housing will contribute to a demonstrable need for housing in Morley that cannot be met by existing sites outside the Green Belt.

We recommend the Council:

- Clarifies how it has assessed the distance to the rail station and nearest bus stop.
- States that the site is available, suitable and achievable.
- Updates the assessment to remove references to Listed Buildings (there are no Listed Buildings in the vicinity of the site).
- States that the development of this site conforms with the Core Strategy and is major settlement extension, along with Site 1282, 1283, 3068 and 1220A.
- Provide further information on what has been used to rank the site.
- Clarifies the Green Belt status of the sites (assessment indicates that Sites 1220B and 2164 are not wholly within the Green Belt).

See rep for full details.

Representation ID: REP01024 Question Ref: H5

1079, 1072, 1077, 1143B, 1143D, 1171B, 1200A, 1258, 1284a, 1285, 1344, 2098a, 3365, 3456A.2098C, 2105, 2155, 3000, 3056,3064, 3078A, 4004, and 4029. As previously stated the amber sites that are greenbelt land should not be considered for development. Site 1032 is designated as a protected area of search this land has been retained along the edge of the existing settlement pending more suitable sites being found in the longer term this site should only be developed as a last resort.

Name: Paul Crowther

Representor No: PRS05072

Representation ID: REP05633 Question Ref: H4

3064 & 3000 provide an infill area which can be developed with little impact on the green belt. We own two sections of land within 3064 and there is a large area of frontage onto Bradford Road which will allow access into sites 3064 & 3000. I believe these should be removed from the greenbelt and allocated residential status.

Site 3000 and Site 3064 Gildersome (see separate appendices in saved pdfs)

1.Introduction

1.1.These reports have been produced in response to Leeds City Councils consultation with regard to the Leeds site allocations plan and in particular to the housing site 3000, Land to the rear of 1-24 Street Lane, Gildersome.

1.2.The reasoning behind this representation is two fold. Firstly, to suggest the creation of a new allocation revising the boundaries suggested by the allocations document to a more logical housing site (see fig 4 in the appendix) and secondly to confirm the ability of both the new site and the original site 3000 to address issues of highways access to the site which is identified within the site allocations document as the reason behind why site 3000 is colour coded amber and not green.

2.Site and Surroundings

2.1 The potential development site is located on land to the rear of 1-24A Street Lane, Gildersome, approximately 800m south of the village centre, and 900m east of the neighbouring village of Drighlington. The site is also located 2.4km west of Morley Town Centre, and 7.5km southwest of Leeds City Centre. The site has been identified as an 'Amber' site by Leeds City Council and is located within the Outer South West Area that encompasses Morley, East and West Ardsley, Beeston, Belle Isle, Drighlington, Gildersome, and Middleton. The majority of the site is made up of Site Ref 3000, and part of the neighbouring site (Site Ref 3064).

2.2 The site is largely a greenfield site used for agricultural purposes. However, to the south side there are 3 industrial starter units, that can be reached using the existing access off Bradford Road. The site access is also used to reach the adjacent electricity substation. The site including the access totals some 2.31 Hectares, using the whole 1.2 Hectares of Site Ref 3000, and 1.11 of Site Ref 3064. The site is bounded by Gildersome Sports and Cricket Club to the north, the remaining section of Site Ref 3064 and a plant hire depot to the west, the residential properties of 1 to 24A Street Lane to the east, and the residential properties off Bradford Road and the electricity substation to the south.

3.The creation of a new site allocation.

3.1 The two site allocations (site 3000 and 3064) have been reviewed to see if a more logical site can be formed that would sit more comfortably within all the planning considerations that form the decision making process within this site allocation process. The resulting revised site can be seen on the accompanying plan (Drawing No: 13054/03). This plan shows an indicative layout that shows how the site could work for illustrative purposes only. Additionally, part of the site to the front which is understood formed part of the SHLAA site 3004 is included to possibly assist with the site access, should this be deemed necessary.

3.2. The creation of this site means that it is within the ownership of two individuals and is readily available should it be allocated as an housing site.

3.3. The revised site is located within the Green Belt and as such, this revised site is now suggested as it provides the best possible site available when assessed against the Green Belt methodology.

3.4 The revised site has physical boundaries to all sides. To the North of the site is a protected playing pitch in the form of Gildersome Sports and Cricket club. This club forms the whole of the Northern boundary and this would prevent further sprawl in a Northward direction (see fig 1 and 2 appendix). The Eastern boundary is formed by housing, again along its entire length (see fig 3 appendix). This also forms the Green Belt boundary as does the Southern boundary, which has an electrical substation and a house with Bradford Road beyond. Finally, the Western boundary is formed by a commercial premises, along two thirds its length, consisting of large buildings and open working areas (see fig 4 appendix). This site also forms the remaining part of site allocation 3064 and if this were to be confirmed as a housing allocation, the revised site proposed here would be totally enclosed by physical development. As it is now, only the Northern part of the Western boundary would form a connection with the more open aspect of the Green Belt beyond and the site would be almost totally enclosed within physical barriers that would prevent further encroachment into the Green Belt.

3.5. As a result, it is considered that in terms of locating housing development within the Green Belt, this revised site would form one of the most acceptable sites within the whole site allocations document due to its enclosed nature and strong physical barriers.

4.Highway access.

4.1 The main issue raised within the site allocations document against site 3000 and 3064 was one of highways and in particular access to the site. This has been dealt with through the accompanying highways report. This demonstrates that access to both site 3000 or the proposed revised site can successfully be achieved to overcome these concerns and that this should not inhibit the site from being included as a Green coded housing allocation.

5.Summary.

5.1 The site is located within the Green Belt as are a large number of the sites proposed within the site allocations document. It appears to be generally accepted that to achieve the numbers of houses that the targets require, it will be inevitable that sites will be required that are located within the Green Belt. It is therefore necessary to find the best sites that have the least impact on the aims of the Green Belt and as described above, the site is considered to be as good as could be found, given its enclosed siting with strong physical boundaries that would prevent further sprawl into the Green Belt.

5.2. Confirmation of the acceptability of the site in highways terms with a good vehicular access as well as excellent multiple pedestrian links suggest that the site is ideally suited to housing development and that its sustainable nature shown within the highways report is further confirmed by the recent approval of a 26 house development (subject to the signing of a section 106 agreement) approximately 200 metres away on the Southern side of Bradford Road.

5.3 As a result, it is considered that the site currently considered as amber in the colour coding system of the site allocations document, should be coded green as it provides a sustainable, accessible site that fulfils best the Green Belt criteria for such sites. It is readily available and whilst obviously within the Green Belt, and therefore not as desirable as brownfield sites in terms of order of delivery, it should still be given a short term delivery phasing due to its availability and its standing as one of the very best Green Belt sites available.

5.4. It is therefore requested that this new site boundary be considered as the preferential manner of dealing with this housing allocation site bringing the most overall benefits and that the site be colour coded green and allocated a short term delivery phasing.

5.5 If this new site is not considered acceptable, then site 3000, using SHLAA site 3004 for access purposes, be considered suitable for housing allocation and that this be colour coded green and allocated a short term delivery phasing

Site Allocations representation for sites 3000 and 3064 of the Outer South West area

Site Allocations representation for sites 3000 and 3064 of the Outer South West area

1.Introduction

1.1.These reports have been produced in response to Leeds City Councils consultation with regard to the Leeds site allocations plan and in particular to the housing site 3000, Land to the rear of 1-24 Street Lane, Gildersome.

1.2.The reasoning behind this representation is two fold. Firstly, to suggest the creation of a new allocation revising the boundaries suggested by the allocations document to a more logical housing site (see fig 4 in the appendix) and secondly to confirm the ability of both the new site and the original site 3000 to address issues of highways access to the site which is identified within the site allocations document as the reason behind why site 3000 is colour coded amber and not green.

2.Site and Surroundings

2.1 The potential development site is located on land to the rear of 1-24A Street Lane, Gildersome, approximately 800m south of the village centre, and 900m east of the neighbouring village of Drighlington. The site is also located 2.4km west of Morley Town Centre, and 7.5km southwest of Leeds City Centre. The site has been identified as an 'Amber' site by Leeds City Council and is located within the Outer South West Area that encompasses Morley, East and West Ardsley, Beeston, Belle Isle, Drighlington, Gildersome, and Middleton. The majority of the site is made up of Site Ref 3000, and part of the neighbouring site (Site Ref 3064).

2.2 The site is largely a greenfield site used for agricultural purposes. However, to the south side there are 3 industrial starter units, that can be reached using the existing access off Bradford Road. The site access is also used to reach the adjacent electricity substation. The site including the access totals some 2.31 Hectares, using the whole 1.2 Hectares of Site Ref 3000, and 1.11 of Site Ref 3064. The site is bounded by Gildersome Sports and Cricket Club to the north, the remaining section of Site Ref 3064 and a plant hire depot to the west, the residential properties of 1 to 24A Street Lane to the east, and the residential properties off Bradford Road and the electricity substation to the south.

3.The creation of a new site allocation.

3.1 The two site allocations (site 3000 and 3064) have been reviewed to see if a more logical site can be formed that would sit more comfortably within all the planning considerations that form the decision making process within this site allocation process. The resulting revised site can be seen on the accompanying plan (Drawing No: 13054/03). This plan shows an indicative layout that shows how the site could work for illustrative purposes only. Additionally, part of the site to the front which is understood formed part of the SHLAA site 3004 is included to possibly assist with the site access, should this be deemed necessary.

3.2. The creation of this site means that it is within the ownership of two individuals and is readily available should it be allocated as an housing site.

3.3. The revised site is located within the Green Belt and as such, this revised site is now suggested as it provides the best possible site available when assessed against the Green Belt methodology.

3.4 The revised site has physical boundaries to all sides. To the North of the site is a protected playing pitch in the form of Gildersome Sports and Cricket club. This club forms the whole of the Northern boundary and this would prevent further sprawl in a Northward direction (see fig 1 and 2 appendix). The Eastern boundary is formed by housing, again along its entire length (see fig 3 appendix). This also forms the Green Belt boundary as does the Southern boundary, which has an electrical substation and a house with Bradford Road beyond. Finally, the Western boundary is formed by a commercial premises, along two thirds its length, consisting of large buildings and open working areas (see fig 4 appendix). This site also forms the remaining part of site allocation 3064 and if this were to be confirmed as a housing allocation, the revised site proposed here would be totally enclosed by physical development. As it is now, only the Northern part of the Western boundary would form a connection with the more open aspect of the Green Belt beyond and the site would be almost totally enclosed within physical barriers that would prevent further encroachment into the Green Belt.

3.5. As a result, it is considered that in terms of locating housing development within the Green Belt, this revised site would form one of the most acceptable sites within the whole site allocations document due to its enclosed nature and strong physical barriers.

4.Highway access.

4.1 The main issue raised within the site allocations document against site 3000 and 3064 was one of highways and in particular access to the site. This has been dealt with through the accompanying highways report. This demonstrates that access to both site 3000 or the proposed revised site can successfully be achieved to overcome these concerns and that this should not inhibit the site form being included as a Green coded housing allocation.

5.Summary.

5.1 The site is located within the Green Belt as are a large number of the sites proposed within the site allocations document. It appears to be generally accepted that to achieve the numbers of houses that the targets require, it will be inevitable that sites will be required that are located within the Green Belt. It is therefore necessary to find the best sites that have the least impact on the aims of the Green Belt and as described above, the site is considered to be as good as could be found, given its enclosed siting with strong physical boundaries that would prevent further sprawl into the Green Belt.

5.2. Confirmation of the acceptability of the site in highways terms with a good vehicular access as well as excellent multiple pedestrian links suggest that the site is ideally suited to housing development and that its sustainable nature shown within the highways report is further confirmed by the recent approval of a 26 house development (subject to the signing of a section 106 agreement) approximately 200 metres away on the Southern side of Bradford Road.

5.3 As a result, it is considered that the site currently considered as amber in the colour coding system of the site allocations document, should be coded green as it provides a sustainable, accessible site that fulfils best the Green Belt criteria for such sites. It is readily available and whilst obviously within the Green Belt, and therefore not as desirable as brownfield sites in terms of order of delivery, it should still be given a short term delivery phasing due to its availability and its standing as one of the very best Green Belt sites available.

5.4. It is therefore requested that this new site boundary be considered as the preferential manner of dealing with this housing allocation site bringing the most overall benefits and that the site be colour coded green and allocated a short term delivery phasing.

5.5 If this new site is not considered acceptable, then site 3000, using SHLAA site 3004 for access purposes, be considered suitable for housing allocation and that this be colour coded green and allocated a short term delivery phasing

1.Introduction

1.1.These reports have been produced in response to Leeds City Councils consultation with regard to the Leeds site allocations plan and in particular to the housing site 3000, Land to the rear of 1-24 Street Lane, Gildersome.

1.2.The reasoning behind this representation is two fold. Firstly, to suggest the creation of a new allocation revising the boundaries suggested by the allocations document to a more logical housing site (see fig 4 in the appendix) and secondly to confirm the ability of both the new site and the original site 3000 to address issues of highways access to the site which is identified within the site allocations document as the reason behind why site 3000 is colour coded amber and not green.

2.Site and Surroundings

2.1 The potential development site is located on land to the rear of 1-24A Street Lane, Gildersome, approximately 800m south of the village centre, and 900m east of the neighbouring village of Drighlington. The site is also located 2.4km west of Morley Town Centre, and 7.5km southwest of Leeds City Centre. The site has been identified as an 'Amber' site by Leeds City Council and is located within the Outer South West Area that encompasses Morley, East and West Ardsley, Beeston, Belle Isle, Drighlington, Gildersome, and Middleton. The majority of the site is made up of Site Ref 3000, and part of the neighbouring site (Site Ref 3064).

2.2 The site is largely a greenfield site used for agricultural purposes. However, to the south side there are 3 industrial starter units, that can be reached using the existing access off Bradford Road. The site access is also used to reach the adjacent electricity substation. The site including the access totals some 2.31 Hectares, using the whole 1.2 Hectares of Site Ref 3000, and 1.11 of Site Ref 3064. The site is bounded by Gildersome Sports and Cricket Club to the north, the remaining section of Site Ref 3064 and a plant hire depot to the west, the residential properties of 1 to 24A Street Lane to the east, and the residential properties off Bradford Road and the electricity substation to the south.

3.The creation of a new site allocation.

3.1 The two site allocations (site 3000 and 3064) have been reviewed to see if a more logical site can be formed that would sit more comfortably within all the planning considerations that form the decision making process within this site allocation process. The resulting revised site can be seen on the accompanying plan (Drawing No: 13054/03). This plan shows an indicative layout that shows how the site could work for illustrative purposes only. Additionally, part of the site to the front which is understood formed part of the SHLAA site 3004 is included to possibly assist with the site access, should this be deemed necessary.

3.2. The creation of this site means that it is within the ownership of two individuals and is readily available should it be allocated as an housing site.

3.3. The revised site is located within the Green Belt and as such, this revised site is now suggested as it provides the best possible site available when assessed against the Green Belt methodology.

3.4 The revised site has physical boundaries to all sides. To the North of the site is a protected playing pitch in the form of Gildersome Sports and Cricket club. This club forms the whole of the Northern boundary and this would prevent further sprawl in a Northward direction (see fig 1 and 2 appendix). The Eastern boundary is formed by housing, again along its entire length (see fig 3 appendix). This also forms the Green Belt boundary as does the Southern boundary, which has an electrical substation and a house with Bradford Road beyond. Finally, the Western boundary is formed by a commercial premises, along two thirds its length, consisting of large buildings and open working areas (see fig 4 appendix). This site also forms the remaining part of site allocation 3064 and if this were to be confirmed as a housing allocation, the revised site proposed here would be totally enclosed by physical development. As it is now, only the Northern part of the Western boundary would form a connection with the more open aspect of the Green Belt beyond and the site would be almost totally enclosed within physical barriers that would prevent further encroachment into the Green Belt.

3.5. As a result, it is considered that in terms of locating housing development within the Green Belt, this revised site would form one of the most acceptable sites within the whole site allocations document due to its enclosed nature and strong physical barriers.

4.Highway access.

4.1 The main issue raised within the site allocations document against site 3000 and 3064 was one of highways and in particular access to the site. This has been dealt with through the accompanying highways report. This demonstrates that access to both site 3000 or the proposed revised site can successfully be achieved to overcome these concerns and that this should not inhibit the site from being included as a Green coded housing allocation.

5.Summary.

5.1 The site is located within the Green Belt as are a large number of the sites proposed within the site allocations document. It appears to be generally accepted that to achieve the numbers of houses that the targets require, it will be inevitable that sites will be required that are located within the Green Belt. It is therefore necessary to find the best sites that have the least impact on the aims of the Green Belt and as described above, the site is considered to be as good as could be found, given its enclosed siting with strong physical boundaries that would prevent further sprawl into the Green Belt.

5.2. Confirmation of the acceptability of the site in highways terms with a good vehicular access as well as excellent multiple pedestrian links suggest that the site is ideally suited to housing development and that its sustainable nature shown within the highways report is further confirmed by the recent approval of a 26 house development (subject to the signing of a section 106 agreement) approximately 200 metres away on the Southern side of Bradford Road.

5.3 As a result, it is considered that the site currently considered as amber in the colour coding system of the site allocations document, should be coded green as it provides a sustainable, accessible site that fulfils best the Green Belt criteria for such sites. It is readily available and whilst obviously within the Green Belt, and therefore not as desirable as brownfield sites in terms of order of delivery, it should still be given a short term delivery phasing due to its availability and its standing as one of the very best Green Belt sites available.

5.4. It is therefore requested that this new site boundary be considered as the preferential manner of dealing with this housing allocation site bringing the most overall benefits and that the site be colour coded green and allocated a short term delivery phasing.

5.5 If this new site is not considered acceptable, then site 3000, using SHLAA site 3004 for access purposes, be considered suitable for housing allocation and that this be colour coded green and allocated a short term delivery phasing

Name: Jw Crowther & Son Ltd Jw Crowther & Son Ltd

Representor No: PRS05426

Representation ID: REP06017 Question Ref: H4

H5: Which Amber sites do you disagree with and why?

Our client owns land within site ref 3064 which is also adjacent to site ref 3000, which are identified as amber sites in the Issues and Options Draft Site Allocations Plan as a 'site which has potential but issues or not favoured as a green site' and considers that the land should be colour coded green as a site that is developable for housing.

NPPF Tests of soundness

Paragraph 182 states:

The Local Plan will be examined by an independent inspector whose role is to assess whether the plan has been prepared in accordance with the Duty to Cooperate, legal and procedural requirements, and whether it is sound. A local planning authority should submit a plan for examination which it considers is "sound" – namely that it is:

Positively prepared, Justified, Effective and Consistent with national policy.

Justification

The sites are located to the north of Bradford Road, Gildersome. It is in the south of the village. Drighlington is located a short way to the west. The site is within the outer south-west of Leeds District in a highly sustainable location being close to the aforementioned villages with a decent range of services and amenities (schools, local shopping facilities and restaurants), but is easily accessible to Morley, a town that has a wide range of shops, services and amenities. The site is also just to the north of facilities at Birstall Retail Park which provides a range of shops and restaurants as well as a cinema. The site is well located in terms of the local highway network and is close to Junction 27 of the M62 and the M621.

The land can be accessed via existing access points to the north of Bradford Road, an adopted road which formerly constituted the through road from Morley through Drighlington. The road has been more recently stopped prior to the construction of the new Drighlington bypass and the roundabout/major junction at Gildersome spur. As such road traffic is now minimal within this short road length and services only a limited number of properties. However, the road is significantly wide in terms of individual carriageways and footpaths, but has separation between carriageways relating to its previous role in the road network. The road therefore is capable of handling a substantial volume of traffic and links into the wider network via the B135 and A650.

Our clients land is in single family ownership and is available for development in the short term.

The site is suitable for residential development as an infill development opportunity with built development on three sides and in a very urbanised area close to the Motorway network and significant retail park. The site is in a highly sustainable location within Gildersome, a large village that is well served by local services and facilities (2 Primary Schools, nurseries, a Co-operative foodstore, an indian restaurant, various eateries/takeaways, public houses, clubs, a library and community centre and a Sure Start Children's Centre). It is also close to Drighlington which has a similar range of facilities and amenities. It is very close to key bus routes with stops in easy walking distance to the east and the west. There are playing fields to the east and a cricket club to the north. Morley is close by which is a key town in the south of Leeds that is served by a substantial range of schools, shops, leisure, services and facilities. To the immediate south of the Motorway is the Birstall Retail Park.

The site is achievable as it is located in a highly sustainable location and is in single family ownership. The owners are willingly promoting the land for development. The site can come forward for development within 5 years and certainly can be developed during the Plan Period.

Proposed Change

The sites reference 3064 and 3000 should be identified within the Site Allocations plan as 'green' sites as having 'greatest potential to be allocated for housing'.

Representation ID: REP06017 Question Ref: H4

H5: Which Amber sites do you disagree with and why?

Our client owns land within site ref 3064 which is also adjacent to site ref 3000, which are identified as amber sites in the Issues and Options Draft Site Allocations Plan as a 'site which has potential but issues or not favoured as a green site' and considers that the land should be colour coded green as a site that is developable for housing.

Representation ID: REP06563 Question Ref: H4

Suggested sites from Amber to Red;

309
1067B
1069
1143F
1220A
1274
1275A
1279
1332
2105
2155
3000
3064
3078A
4004

These sites are almost all located within the existing Green Belt and expansion into the Green Belt would lead to increased urban sprawl between the various townships in the Outer South West, and lead to coalescence between communities

Development of the Green Belt sites would also reduce the open green area and provide encroachment into the countryside around Morley and other smaller townships.

In addition there is insufficient road capacity and little scope for expansion for other necessary services. There would be a requirement for new or upgrading of existing roads which would therefore favour development on sites that are already located within the Morley or the Leeds Urban areas rather than eroding the Green Belt further.

Site 3078A is close to potential development in Kirklees and could lead to the complete erosion of the Green Belt and open green space between Leeds and Kirklees.

Any further development at sites 1275A and 1279 would reduce the Green Belt between the existing residential boundary and the A653 Dewsbury Road to a narrow strip which would put pressure in future years to extend residential use further east.

See rep for full details.

Representation ID: REP07983 Question Ref: H4

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Green and Amber Sites within the Core Public Transport Network

Table 4 below contains sites that are classified as 'Sites which have potential to be allocated for housing' and 'Sites which have potential but issues or not as favoured as green sites' that fall within 400m of the current core bus network.

The sites in this list are supported for housing growth.

Site specific mitigation would be required but it is unlikely that substantial bus service provision would be required at these sites (based on the current public transport network)

From a public transport perspective, we would encourage the prioritisation of these sites based on the proximity to the core public transport network and the bus service frequency levels.

[see table in full representation submitted which lists sites - amber sites are linked to this comment]

3003, 1344, 1077, 333 All sites in Drighlington should be red sites. These are all green belt and should remain as such, there will be no land left in the area. We will be joined to Leeds. Drighlington is no longer a village, there is no infrastructure, roads jammed with traffic, doctors full, no shops, poor sewerage system throughout the village. Roads already full. No schools. We do not want to be an extension of Leeds. The sites are green belt and need to be left as such, to maintain the character of Drighlington. We do not have the infrastructure for any more people or buildings. We had two schools, one has now closed, already the new school has had an extension - so where will all the children go? Why not refurbish the disused mill on Whitehall Road for housing instead of using green field sites?

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Green and Amber Sites within the Core Public Transport Network

Table 4 below contains sites that are classified as 'Sites which have potential to be allocated for housing' and 'Sites which have potential but issues or not as favoured as green sites' that fall within 400m of the current core bus network.

The sites in this list are supported for housing growth.

Site specific mitigation would be required but it is unlikely that substantial bus service provision would be required at these sites (based on the current public transport network)

From a public transport perspective, we would encourage the prioritisation of these sites based on the proximity to the core public transport network and the bus service frequency levels.

[see table in full representation submitted which lists sites - green sites are linked to this comment]

Representor No: PRS00130

Representation ID: REP04606 Question Ref: H7

It seems a great deal of money and time has been spent on producing long documents for future development without giving any thought to how the infrastructure is going to cope which is already struggling.

I refer to these following residential sites and possible housing sites.

SITE REF. ADDRESS CAPACITY:

137A Britannia Road 33

137B Britannia Road 87

141 Tingley Common 36

1018A Topcliffe lane 231

3077A Rein Road 246

3077B Rein Road 124

1281B Bruntcliffe Road 234

1064B Bruntcliffe Road 11

3467 Bruntcliffe Road 16

The last three sites have had conditions placed on them by a government inspector that was hard fought for and we strongly feel that those should be included in the LDF.

Development of all of these sites which are close to the A650 would put a vast unexceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock,the problems we have on the A650 are well documentated. Schools are filling up at an alarming rate,health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. ,Morley has no need for anymore industrial estates, warehouses,offices etc.VVhile there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communties. Brownfield sites such asTingley Mills,land at the bottom of High Street,Bridge Street, Fountain Street and the many brownfield sites in Leeds,just to name a few should be developed first. It appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

Representation ID: REP04142 Question Ref: H7

It seems a great deal of money and time has been spent on producing long documents for future development without giving any thought to how the infrastructure is going to cope which is already struggling.

I refer to these following residential sites and possible housing sites.

SITE REF. ADDRESS CAPACITY:

137A Britannia Road 33

137B Britannia Road 87

141 Tingley Common 36

1018A Topcliffe lane 231

3077A Rein Road 246

3077B Rein Road 124

1281B Bruntcliffe Road 234

1064B Bruntcliffe Road 11

3467 Bruntcliffe Road 16

The last three sites have had conditions placed on them by a government inspector that was hard fought for and we strongly feel that,those should be included in the LDF.

Development of all of these sites which are close to the A650 would put a vast unexceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock,the problems we have on the A650 are well documentated. Schools are filling up at an alarming rate,health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. ,Morley has no need for anymore industrial estates, warehouses,offices etc.While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communties. Brownfield sites such asTingley Mills,land at the bottom of High Street, Bridge Street, Fountain Street and the many brownfield sites in Leeds,just to name a few should be developed first. It appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

3467 Bruntcliffe Road 16

The last three sites have had conditions placed on them by a government inspector that was hard fought for and we strongly feel that those should be included in the LDF.

Development of all of these sites which are close to the A650 would put a vast unexceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock,the problems we have on the A650 are well documentated. Schools are filling up at an alarming rate,health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. ,Morley has no need for anymore industrial estates, warehouses,offices etc.While there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communties. Brownfield sites such asTingley Mills,land at the bottom of High Street,Bridge Street, Fountain Street and the many brownfield sites in Leeds,just to name a few should be developed first. It appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

Development of all of these sites which are close to the A650 would put a vast unexceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock,the problems we have on the A650 are well documentated. Schools are filling up at an alarming rate,health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. ,Morley has no need for anymore industrial estates, warehouses,offices etc.VVhile there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communties. Brownfield sites such asTingley Mills,land at the bottom of High Street,Bridge Street, Fountain Street and the many brownfield sites in Leeds,just to name a few should be developed first. It appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

Housing

Land At M621 Junction 27 And Wakefield Road Gildersome Leeds

Name: S Roberts

Representor No: PRS02319

Representation ID: REP04567 Question Ref: H7

It seems a great deal of money and time has been spent on producing long documents for future development without giving any thought to how the infrastructure is going to cope which is already struggling.

I refer to these following residential sites and possible housing sites.

SITE REF. ADDRESS CAPACITY:

137A Britannia Road 33

137B Britannia Road 87

141 Tingley Common 36

1018A Topcliffe lane 231

3077A Rein Road 246

3077B Rein Road 124

1281B Bruntcliffe Road 234

1064B Bruntcliffe Road 11

3467 Bruntcliffe Road 16

The last three sites have had conditions placed on them by a government inspector that was hard fought for and we strongly feel that those should be included in the LDF.

Development of all of these sites which are close to the A650 would put a vast unexceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock,the problems we have on the A650 are well documentated. Schools are filling up at an alarming rate,health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. ,Morley has no need for anymore industrial estates, warehouses,offices etc.VVhile there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communties. Development of all of these sites which are close to the A650 would put a vast unexceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock,the problems we have on the A650 are well documentated. Schools are filling up at an alarming rate,health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. ,Morley has no need for anymore industrial estates, warehouses,offices etc.VVhile there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communties. Brownfield sites such asTingley Mills,land at the bottom of High Street,Bridge Street, Fountain Street and the many brownfield sites in Leeds,just to name a few should be developed first. It appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

Housing

Land At M621 Junction 27 And Wakefield Road Gildersome Leeds

Name: C Guy

Representor No: PRS02377

Representation ID: REP04630 Question Ref: H7

It seems a great deal of money and time has been spent on producing long documents for future development without giving any thought to how the infrastructure is going to cope which is already struggling.

I refer to these following residential sites and possible housing sites.

SITE REF. ADDRESS CAPACITY:

- 137A Britannia Road 33
- 137B Britannia Road 87
- 141 Tingley Common 36
- 1018A Topcliffe lane 231
- 3077A Rein Road 246
- 3077B Rein Road 124
- 1281B Bruntcliffe Road 234
- 1064B Bruntcliffe Road 11
- 3467 Bruntcliffe Road 16

The last three sites have had conditions placed on them by a government inspector that was hard fought for and we strongly feel that those should be included in the LDF.

Development of all of these sites which are close to the A650 would put a vast unexceptable amount of traffic on to a road which is already classed as being over loaded by the highway department and would create total gridlock,the problems we have on the A650 are well documentated. Schools are filling up at an alarming rate,health and care facilities police etc are facing more cuts in funding all putting a strain on the infrastructure. ,Morley has no need for anymore industrial estates, warehouses,offices etc.VVhile there may be need for a realistic number of houses to be built the need to keep open green buffer zones between areas should be maintained these play an important part in all local communties. Brownfield sites such as Tingley Mills, land at the bottom of High Street, Bridge Street, Fountain Street and the many brownfield sites in Leeds, just to name a few should be developed first. IT appears that Leeds has not spoken to other local councils about their development plans because what and where they build also affects Morley. The numbers do not add up and are impractical, unsustainable and will cause utter chaos.

Housing

Land At M621 Junction 27 And Wakefield Road Gildersome Leeds

Name: Joseph Rowntree Housing Trust

Representor No: PRS05780

Representation ID: REP06462 Question Ref: H7

I am writing on behalf of our client, Joseph Rowntree Housing Trust, in response to the consultation on the Issues and Options version of the Site Allocations Plan, and in particular a parcel of land off Wakefield Road in Gildersome. The site is referenced 3007, CFSM040 and 2301611.

The site was allocated in the Unitary Development Plan under reference E3B:7 for industry/warehousing and ancillary offices. The current consultation document includes details of the site under Table 10.4.1 of Volume 2, document 10 – Outer South West which lists "sites for office development." It appears the site has been included in this table because planning permission was granted under reference 23/360/03/RE for office development. The table is quite right to note the permission has now lapsed and to reflect the most up to date status of the land at the time the consultation was drafted.

There does however appear to be some conflicts within Volume 2, document 10 - Outer South West which shows the site to be rejected for a mixed use scheme on Plan 10.3, but then shows the site to benefit from planning permission/allocation for a mixed use scheme on Plan 10.4 and be identified for office development under Table 10.4.1.

Irrespective of the content of the current consultation document, we wish to bring to your attention how events have now moved on again. Since the consultation document was published Planning Committee has resolved to grant planning permission for a mixed use scheme comprising B1, B2, C1, A3 and A4 uses under reference 10/04597/OT subject to the signing of a Section 106 Agreement. The intention to grant planning permission means that details of the site under Table 10.4.1 of Volume 2, document 10 are now out of date and incorrect, especially given the predominant use is no longer for offices. We expect planning permission to be confirmed after 9th August.

Once the site has a valid planning permission it becomes a 'commitment' and part of the Council's supply of land. As you will be aware, the allocation of land is only required where a site does not benefit from planning permission in order to establish the principle of development is acceptable and to establish a future supply of land for development. Where a site has planning permission then not only has the principle been established, but the status of the site as part of the Councils' land supply has been confirmed. We therefore believe details of the site only need to be noted as part of the Council's supply of land. Once planning permission has been confirmed, the site will not therefore need to be specifically allocated within the Local Plan for development. This point also applies to other sites within the document (and listed under Table 10.4.1 and 10.4.2) that have planning permission and therefore do not need to be specifically allocated for development. On the basis of the process for preparing Local Plans, we hope the list of commitments under Table 10.4.1 and 10.4.2 is simply to provide an explanation of those sites that contribute to the land supply rather than the Council's intention to allocate the land in the Site Allocations Plan. The list will however need to be updated as the process progresses.

In terms of those sites which were allocated in the UDP, but do not benefit from planning permission, there is an additional point to make in terms of procedures for preparing Local Plans. The point is that previous allocations cannot simply be carried forward. It is necessary to undertake an assessment to determine the deliverability of the sites in order to determine whether they will contribute to the land supply during the Plan period or should in fact be deleted because they are unlikely to come forward. In the case of the Leeds Site Allocations Plan it is also necessary to undertake such an assessment of UDP allocations to be carried forward because the sites have not previously been subjected to the necessary Sustainability Appraisal.

We do however appreciate that where planning permission has expired then it is appropriate to allocate land in order to re-establish the principle of development. This is however no longer the case with the land off Wakefield Road, Gildersome.

We will write again once planning permission has been confirmed in order to update you on the situation.

I hope you will reflect the points made in this letter in the next version of the Site Allocations Plan.

Representor No: PRS06750

Representation ID: REP07983 Question Ref: H7

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Red Sites within the Core Public Transport Network

Table 5 below contains sites that are classified as 'Sites not considered suitable for allocation for housing' that fall within 400m of the current core bus network. From a public transport perspective, these sites (in principle) would be acceptable for housing development. For the larger sites, site specific mitigation would be required but it is unlikely that substantial bus service provision would be required at these sites (based on the current public transport network).

Representor No: PRS05410

Representation ID: REP06016 Question Ref: H4

3056 – Land to the south of Gelderd Road, Wortley

4.26 The site is currently in agricultural use and is set amongst a collection of other proposed allocations. The brief assessment carried out by the council suggests that the site is reliant upon a link road from Whitehall Road in the east to Gelderd Road to the west.

4.27 The site is currently located within the Green Belt and there is the clear potential for further urban sprawl into the fields further south.

Recommendation – reclassify as 'red' due to the obvious lack of a defensible boundary and therefore its potentially damaging impact on the Green Belt.

Site Comments - Outer South West

Site reference: 3056

Housing

Wood Lane, Farnley

Name: Neil Dawson

Representor No: PRS05884

Representation ID: REP06563 Question Ref: H4

The current number of sites required in the Outer South West is 7,200 and not withstanding my comments above on the overall numbers I would suggest the following changes to site allocations.

The total green and amber housing sites allocated in Outer South West is 9,653 whereas the plan is seeking 5,586 residential units. 1,614 housing units already have planning permission. There is therefore scope to increase the number of housing sites allocated as Red which are therefore not considered suitable for housing allocation.

There are two underlying reasons for revising the allocation of sites from Green and Amber to Red.

Firstly to protect the existing Green Belt around Morley and the Green Belt around smaller settlements in the Outer South West. In particular to restrict the sprawl of large built up areas and to prevent Morley and smaller settlements from merging to existing townships.

Secondly in my submission to the LDF in April 2012 I identified the Beeston Royds area in Outer South West as an area suitable for further significant housing development. This area is on the edge of the main urban area of Leeds. It has very good existing road links (the A61, A58 and the A6110) and it is close to the M621/M62.

There is a mixture of employment and residential use in the area and careful planning in the area should allow both employment and residential developments to take place for the duration of the plan.

Suggested sites to move from Amber to Green;

141
2078
3056
3386
4029

Site 141 is currently in employment use but is a brownfield site and as such should be considered for residential development ahead of other potential Greenfield sites.

The sites 3056, 2078, 4029 and 3386 are located in the Beeston Royds area in Farnley and Wortley ward and should be considered for residential development.

These sites could link with existing development in the area which is part of the main Leeds urban area. These developments will require a new road linking Gelderd Road and Whitehall Road but given the number of housing units this should be economically viable. The area would then have good access to the existing road network, at the Leeds Outer Ring Road and the M621/M62. It is close to retail facilities at Junction One, the White Rose Centre plus local shops in Lower Wortley. There is also potential for primary school development in the area if the total number of sites is expanded.

Amber Sites outside the Core Public Transport Network

Table 2 below contains sites that are classified as 'Sites which have potential but issues or not as favoured as green sites' but fall outside 400m of the current core bus network. Consideration needs to be given to if this site would be able to meet the LDF public transport accessibility requirements should housing be brought forward. We are be minded to recommend that these site were not prioritised for housing until other more accessible site have been considered. Sites which fall marginally outside the 400m catchments and have high bus frequencies or are small low capacity sites are less of concern but are flagged up nonetheless.

Representor No: PRS05758

Representation ID: REP06414 Question Ref: H7

We object to the rating of site reference 3060 as Red (sites not considered suitable to be allocated for housing). Our objection relates to parcel 3060, which is to the north of Asquith Avenue and to the east of Gelderd Road, Gildersome. This site was submitted to the Site Allocations DPD during the Call for Sites Process and again as a response to the draft Core Strategy in April 2012. It extends to approximately 10 ha and forms the southern section of site reference 3060. We object to the amalgamation of a number of sites into site reference 3060 which has a total site area of 120 hectares and has been deemed not suitable for housing by Leeds City Council. We believe that Leeds City Council have misinterpreted the specific potential of the land at Gelderd Road and Asquith Avenue and that this land (as originally submitted) should be given a Green rating and allocated for housing for the reasons set out below. Taylor Wimpey are committed to developing this site for housing. The Concept Plan appended to this statement proposes the retention of the fields to the north of the hotel as a public open space facility. This further assists in divorcing this SHLAA site from those to the north.

Green Belt Review

To check the unrestricted sprawl of large built-up areas

The site is well connected to the built up area. The western boundary is residential development, to the south west is a restaurant and industrial area and it is contained by trees and the M621 motorway to the east.

To prevent neighbouring towns merging into one another

Development would not lead to neighbouring towns merging into one another as the site is bounded to the west by residential development, to the east by trees and the M621 motorway and to the south by existing development and the employment allocation. Development of this site would not lead to ribbon development and would not result in isolated development.

To assist in safeguarding the countryside from encroachment

The site does not perform a significant role in safeguarding the countryside from encroachment. The site is a distinct enclave rather than a wide tract of open countryside.

To preserve the setting and special character of historic towns

The site is not within or adjacent to a Conservation Area, listed building or other historical feature. Development of this site would have no effect on the setting and special character of historic features.

To assist in urban regeneration, by encouraging the recycling of derelict and other urban land

Spatial Policy 1 of the Core Strategy advises that an appropriate balance of greenfield and brownfield land will be necessary to deliver the spatial development strategy. There are few derelict and brownfield sites available within the Outer South West housing market area; therefore the development of greenfield sites will be necessary in order to meet the housing requirement in the draft Core Strategy and a number of these are likely to be on land currently designated as Green Belt.

This site has been wrongly bundled with a much larger area of Green Belt which is more distant from the settlement edge. The removal of the subject land from the Green Belt can deliver future development which meets all of the key attributes of sustainability – economic, social and environmental.

The site and location characteristics are wholly capable of providing the following benefits which will cumulatively contribute to sustainable development: -

- ☐ The siting of new homes close to existing and future employment sites. Within a very short commuting radius of under 3kms there are substantial zones of existing and likely future employment. This provides major potential to reduce the length of commuting journeys and encourage the use of sustainable modes of transport.
- ☐ The subject land is capable of providing elements of a mixed use development including the potential for a new local centre providing for the daily needs of existing and new residents as well as local employees. This potential is significant given the lack of such services in Gildersome.
- ☐ With the exception of the designated Local Nature Area and the areas of woodland on its boundaries the subject site is of no particular environmental or visual quality. As part of a future well planned development there is potential to enhance the local environment and biodiversity.
- ☐ The future development can be planned so that connectivity with the surrounding countryside is improved to the benefit of the health and well being of existing and future residents.
- ☐ The scale of the site's development capacity means that it will be capable of benefiting from on or near site sustainable energy generation.
- ☐ The site is outside flood risk zones 2 and 3 and is not subject to any significant environmental or physical constraints which will preclude the achievement of sustainable development.
- ☐ The scale of the potential residential development can provide for a wide choice of high quality homes, including affordable housing in an inclusive and mixed community.

Consequently this subject site can be developed in a sustainable way via its close physical and potential social, economic and environmental connections with the nearby urban areas of Gildersome and Morley. The development of this site can be well contained and avoid any element of urban sprawl into the wider open countryside. The main functions of the Green Belt identified at paragraph 80 of the NPPF can be maintained. The potential 'fit' of development in this locality with the urban form of Morley/Gildersome is very good indeed.

A development masterplan has been submitted with this response to demonstrate how the site could be developed. This illustrates the retention of the northern fields as POS with proposed footpath connections.

This area of land is extremely well located to contribute to this urban extension element of the requirement in the Outer South West housing market area due to its sustainable attributes and excellent fit with the urban area. It is located close to existing facilities and services in Morley and Gildersome including shops, schools and healthcare facilities. It is also well located to access regular bus and train services as well as trips on foot and by cycle.

There are no significant on site constraints which would preclude development; vehicular access can be provided from either Gelderd Road and/or Asquith Avenue. It is however envisaged that access from Asquith Avenue will be the preferred solution. The established tree belts provide a

framework for Green Belt release and there are no adverse levels which would inhibit development.

The site is deliverable when considered against the definition of deliverable in the Framework (footnote 11 of paragraph 47). The site is available now given the agreement in place between the landowners and a national housebuilder. The site is in a sustainable location, suitable for the delivery of housing as detailed in this response. There are no insurmountable physical problems or limitations and as such the site is considered to be suitable for housing. It is considered that this is an achievable site, which has a realistic prospect of being delivered within 5 to 7 years; there are no known viability issues restricting the site from coming forward.

For the reasons set out above, we support the housing allocation of that part of site reference 3060 as shown on the attached concept plan.

See rep for full details.

- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Red Sites within the Core Public Transport Network

Table 5 below contains sites that are classified as 'Sites not considered suitable for allocation for housing' that fall within 400m of the current core bus network. From a public transport perspective, these sites (in principle) would be acceptable for housing development. For the larger sites, site specific mitigation would be required but it is unlikely that substantial bus service provision would be required at these sites (based on the current public transport network).

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Housing

Greystone Farm/Bungalow, Wakefield Road, Drighlington

Name: Liongate Developments Ltd

Representor No: PRS03010

Representation ID: REP05579 Question Ref: H4

These representations relating to the above document have been prepared by Barton Willmore on behalf of our client, Liongate Developments Limited ("LDL") in relation to land adjacent to Birchfield Primary School, Birchfield Avenue, Gildersome (hereafter referred to as 'the Site').

Background

The Site Allocations Plan will form part of Leeds City Council's development plan and will allocate sufficient sites to meet the city's housing, employment and retail needs throughout the next 15 years, in accordance with the Council's overarching strategic document, the Core Strategy. The Issues and Options draft outlines initial ideas for the potential allocations to meet the Council's needs and the comments of the general public and relevant stakeholders are sought regarding these initial allocations.

The extent of our client's land broadly corresponds to Site 3064 within the Site Allocations Plan. These representations detail how the land would make a sustainable site for additional housing within this area of Leeds and in doing so would assist in the Council in meeting its future housing targets.

The rest of these representations are structured as follows:

- A description of the site and surroundings;
- An overview of the planning policy context (including background evidence that has fed into the draft Site Allocations Plan);
- An assessment of the Site's potential for future residential development;
- Assessment of other potential housing allocations in the Gildersome area; and
- Summary and Conclusions.

The Site and its Surroundings

The Site is situated to the south and west of Gildersome and 7.8km to the south west of Leeds City Centre. It currently comprises undulating agricultural land directly adjacent to the built-up area.

The Site is located to the south of Woodhead Lane with Birchfield Primary School and a number of existing residential properties off Street Lane and East View located to the east along with Gildersome Sports Club. To the south lies a mix of residential and employment properties off Bradford Road. Further agricultural uses are found to the west.

Gildersome itself is village suburb of Leeds and is located around 3km to the north west of the town of Morley. The village itself consists predominantly of residential housing estates but does benefit from a number of key services including a GP's surgery, a library, a local foodstore and 2 primary schools.

Planning Policy Context

The National Planning Policy Framework

The National Planning Policy Framework ("NPPF") was published in March 2012 and provides a blueprint for how plan-making should be undertaken. At its core the NPPF contains a presumption in favour of sustainable development.

Paragraph 7 of the Framework refers to the three dimensions to sustainable development: economic, social and environmental. These dimensions are said to give rise to the need for the planning system to perform a number of roles:

- An economic role — contributing to building a strong, responsive and competitive economy, by ensuring that sufficient land of the right type is available in the right places and at the right time to support growth;
- A social role — supporting strong, vibrant and healthy communities, by providing the supply of housing required to meet the needs of present and future generations; and by creating a high quality built environment, with accessible local services that reflect the community's needs and support its health, social and cultural well-being; and
- An environmental role — contributing to protecting and enhancing our natural, built and historic environment; and as part of this, helping to improve biodiversity, use natural resources prudently.

Paragraph 17 of the NPPF outlines the twelve core land-use planning principles that should underpin plan-making. The third principle states that planning should "proactively drive and support sustainable economic development to deliver the homes, business and industrial units, infrastructure and thriving local places that the country needs".

Specifically in terms of housing, Paragraph 47 of the NPPF states that in undertaking plan-making, local planning authorities should seek to significantly boost the supply of housing within their area and "use their evidence base to ensure that their Local Plan meets the full and objectively assessed needs for market and affordable housing in the housing market area". It also outlines that local planning authorities must ensure that identified land is deliverable and defines this as:

"....be[ing] available now, offer[ing] a suitable location for development now, and be[ing] achievable with a realistic prospect that housing will be delivered on the site within five years and in particular that development of the site is viable".

Paragraph 52 further notes that the "supply of new homes can sometimes be best achieved through planning for larger scale development, such as new settlements or extensions to existing villages and towns...".

In respect of Green Belt, the NPPF outlines that a review of Green Belt boundaries can be undertaken through the plan making process and that "when drawing up or reviewing Green Belt boundaries local planning authorities should be taken account of the need to promote sustainable patterns of development".

The purpose of the Green Belt is then subsequently detailed in Paragraph 80 and that is:

Site Comments - Outer South West

- To check the unrestricted sprawl of large built-up areas;
- To prevent neighbouring towns merging into one another;
- To assist in safeguarding in the countryside from encroachment;
- To preserve the setting and special character of historic towns; and
- To assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

As part of the requirement to support sustainable development Paragraph 34 of the NPPF states that plans should ensure developments that generate significant movement are located where the need to travel will be minimised and the use of sustainable transport modes can be maximised.

Leeds Unitary Development Plan

The Unitary Development Plan ("UDP") was adopted in 2001 and alterations were subsequently made to the plan in 2006 following a review. The UDP forms the Council's current development plan

Within the Leeds UDP the site is designated as part of the Green Belt and as an Urban Fringe Priority Area. The Urban Fringe Priority Area states support will be given to management initiatives to secure environmental improvements, the beneficial use of land and increased public access where this can be appropriately managed.

Emerging Planning Policies

Core Strategy

The Core Strategy was submitted to the Secretary of State for Examination on 26th April 2013 and it is yet to be adopted. However, the Site Allocations DPD aims to achieve the overarching strategic vision for the District that is set out within the Core Strategy.

Spatial Policy 6 of the draft Core Strategy states that in order to identify the proposed housing sites that will meet the Council's housing needs the following considerations will be taken into account:

- Sustainability of location — access to public transport and new and local facilities and services including educational and health;
- Preference for brownfield sites;
- The least impact on Green Belt purposes;
- The ability to improve neighbourhoods through high quality design;
- Consideration for lead-in times and build-out rates for housing construction;
- Impacts on green infrastructure, green corridors, greenspace and nature conservation; and
- Potential flood risk.

Spatial Policy 10 of the draft Core Strategy acknowledges that a Green Belt review is required in order to ensure that the Council's housing target of 66,000 new dwellings can be achieved. The policy states that Green Belt release will be considered in the following areas:

- The main urban area (Leeds City Centre and surrounding areas forming the main urban and suburban areas of the city);
- Major Settlements; and
- Smaller Settlements

The draft Core Strategy regards Gildersome as falling within the smaller settlements category and so is capable of being included within the review of the Green Belt.

Site Allocations Plan

The Site Allocations Plan Issues and Options draft is subject to this consultation. The residential element of the document has been based on the Strategic Housing Land Availability Assessment ("SHLAA") undertaken as part of the background evidence to the Council's emerging development plan.

In order to assess the sites that have been put forward for residential use the Site Allocations Plan has adopted a traffic lighting system to identify the most suitable sites. The sites have been listed in one of the following categories:

- Light Green — the site is either allocated or there is an existing planning permission for development of the site;
- Dark Green — sites which have the greatest potential to be allocated for housing;
- Amber — sites which have potential but issues or not favoured as green sites; and
- Red — sites not considered to be suitable for allocation.

Gildersome is located within the Outer South West area where the document proposes to deliver 7,200 new homes throughout the next 15 years. It identifies that there are currently 1,614 dwellings to be built from existing planning permissions and allocations which leaves a residual target of 5,586 dwellings. The dark green sites within the Outer South West area provide a total yield of 4,154 units. For the reasons stated below we dispute these overall housing figures which we believe should be notably higher. Nevertheless even taking into account these published figures, in order for the Council to meet its housing target in this part of the Leeds it will need to consider additional sites; including, where necessary, a review of the Green Belt boundaries.

The Site corresponds to the reference 3064 and is currently designated amber within the draft of Site Allocations Plan with the Council observing that the Site's current Green Belt designation as well as potential issues regarding access are acting as constraints on future development. The analysis is consistent with the SHLAA which notes similar constraints associated with the site.

With this in mind we consider the site's potential as a future housing allocation below.

Consideration of the Site as a Future Housing Allocation

Principle of a Housing Allocation on the Site

As outlined above, the Core Strategy outlines that the Council must provide 66,000 new homes over the plan period. In this respect we refer to our previous representations to the Core Strategy undertaken by Barton Willmore which object to this proposed housing target, and which detail our

Site Comments - Outer South West

Site reference: 3064

Housing

Greystone Farm/Bungalow, Wakefield Road, Drighlington

Name: Liongate Developments Ltd

Representor No: PRS03010

concerns that this level of planned growth has not been justified or positively prepared. Based on evidence presented in our representations, we believe there is sound evidence providing justification for a higher overall housing target.

Irrespective of this the Site Allocations Plan will nevertheless need to be prepared in accordance with the NPPF and as such will need to ensure that each site is able to accommodate development that is sustainable. As outlined in our analysis above, even taking into account the current published figures the Outer South West area, the Council will still need to consider some of the other sites in order to meet its housing target. Of these it is clear that the most suitable will be the amber sites of which our client's site is one. It therefore follows that it is necessary to establish the sustainability credentials of the proposed sites to see if they are suitable to take forward as residential allocations as the development plan progresses.

In this respect we regard our client's site as a sustainable option for a future residential allocation on the basis that the Site is well related to the existing built-up area of Gildersome and is in a location that provides easy access to key local services including shops, banks and schools; many within Gildersome itself and others in nearby Morley. The Site is also located in an area with a good public transport service with a bus stop around 250m from the site with services to Leeds City Centre, Huddersfield, Morley, Dewsbury and Birstall (routes 209 and 219). As a result of this it is considered that a housing allocation on the site would be consistent with paragraphs 17, 34, 47 and 52 of the NPPF (detailed above) and draft Spatial Policy 6 of the emerging Core Strategy.

A detailed above, Paragraph 7 of the NPPF identifies three specific but interrelated roles that need to be considered; these are economic, social and environmental. It is considered that in the case of our client's site that it could contribute to all three of these roles by:

- Contributing to building a strong economy by ensuring sufficient land is available for housing which can be utilised by the local workforce, now and in the future and that new residents can help sustain existing local businesses in the area;
- Being capable of delivering much needed housing within this area of Leeds and is capable of offering an appropriate mix of housing sizes and types and so can make a positive impact on social and well-being; and
- Being a relatively unconstrained Site that is capable of addressing any environmental issue that may be associated with its redevelopment.

As such, on a principle level the Site would make a sustainable contribution to housing within the Outer South West Area of Leeds and so should be considered favourably as a housing allocation. Having demonstrated this, we now explore the site specific considerations relating to the Site below.

Site Specific Considerations
The assessment of the Site within the Council's SHLAA, along with the accompanying analysis within the draft Site Allocation Plan generally considers the Site favourably as a future residential allocation. Nevertheless two constraints are noted and are the reason why the Site is currently classified as amber. These constraints are:

- The Site's access
 - The Site's current Green Belt designation.
- We provide our own assessment of these constraints below.

Site Access

To explore site access in more detail we instructed PAH Highway Consultants Ltd to analyse the Site and to assess its potential for providing a safe and acceptable access. Their assessment is appended to this letter as Annex 1 and concludes that a safe and adequate access arrangement can be achieved off Bradford Road to serve residential accommodation and in doing so addresses Paragraph 34 of the NPPF.

This demonstrates that a viable access on to the Site can be achieved and so should no longer be regarded as a constraint when considering it as a future residential allocation.

Green Belt

As part of the Council's emerging development plan, a selective review of the Green Belt is to be undertaken in accordance with draft Spatial Policy 10 of the draft Core Strategy. This will allow the Council to decide which sites would be suitable for removal from the Green Belt to then be allocated for future development. In this regard the Council has already assessed many of the sites within the Site Allocations Plan including our client's land (Site 3064).

The Green Belt assessment covers the criteria outlined within paragraph 80 of the NPPF to ascertain each site's suitability for removal. Overall our client's site performs well when judged against they criteria; in particular the assessment notes that the Site:

- Is well connected to built-up area;
- Has a low potential for unrestricted sprawl;
- Will not result in the merging of two settlements; and
- Provides an opportunity to 'round-off' the settlement.

Nevertheless for completeness we have also undertaken our own Green Belt assessment of the site below using the Council's pro-forma contained in Appendix 1 of the Site Allocations Plan Issues and Options draft. *see pdf of representation*

Our own assessment is consistent with the Council's and concludes that the Site should be favoured for removal from the Green Belt on the basis that it scores well against the above criteria.

Summary of Site Specific Analysis

Our own analysis of the site specific constraints identified show the Site is both capable of providing a sufficient access and that it is a suitable candidate for removal from the Green Belt. This provides further justification that the Site should be considered positively as a housing allocation within the Site Allocations Plan.

Consideration of Other Sites

Site Comments - Outer South West

Site reference: 3064

Housing

Greystone Farm/Bungalow, Wakefield Road, Drighlington

Name: Liongate Developments Ltd

Representor No: PRS03010

The Issues and Options draft of the Site Allocations Plan contains a number of questions regarding the classification of the identified housing sites. We answer these below and in doing so assess some of the other potential housing sites within the Outer South West area. *see pdf of representaiton for table*Our analysis shows that when many of those sites that are also classified as amber within the Site

Allocations Plan document are assessed, their associated constraints demonstrate that they are less preferable and less sustainable than our client's site and so should be reclassified as unsuitable (red) sites.

In contrast to this our client's site would make a sustainable contribution to housing land within the Outer South West area of Leeds and the constraints identified can be readily addressed.

Summary and Conclusions

These representations have been submitted in relation to our client's land off Birchfield Avenue, Gildersome. The site has been given the reference of 3064 site and has been classified as an amber site within the draft Site Allocations Plan. This means that although the site could come forward as a residential allocation, there are constraints relating to it. The constraints identified are its current Green Belt designation and potential access issues.

The emerging Core Strategy identifies that Leeds needs to provide 66,000 new dwellings over the plan period and that the Outer South West area (containing Gildersome) is proposed to deliver 7,200 of these. There are currently 1,614 dwellings to be built from existing planning permissions and allocations which leaves a residual target of 5,586 dwellings. The dark green sites within the Outer , South West area provide a total yield of 4,154 units. Barton Willmore's previous representations to the Core Strategy outline our objections to these current housing levels (which we believe should be higher). Nevertheless even taking into account these current numbers, in order to meet its housing targets, the Council will need to consider additional sites.

It is against this background that we have examined our client's site and we have provided within this letter and attachments evidence to show the constraints associated with the Site can be overcome demonstrating that it is a suitable candidate for removal from the Green Belt and that a safe and adequate access can be provided. Taking this into account as well as the overall sustainability credentials of the Site when assessed against the policies of the NPPF, the Site should be favourably considered as a residential allocation.

For completeness we have also examined other sites within the Outer South West area that are being considered for residential allocations. Many of these sites do not provide the advantages that our client's site does in terms of their sustainability and some are unduly constrained. These sites are therefore not as preferable as future residential allocations.

Representation ID: REP05633 Question Ref: H4

3064 & 3000 provide an infill area which can be developed with little impact on the green belt. We own two sections of land within 3064 and there is a large area of frontage onto Bradford Road which will allow access into sites 3064 & 3000. I believe these should be removed from the greenbelt and allocated residential status.

Site 3000 and Site 3064 Gildersome (see separate appendices in saved pdfs)

1.Introduction

1.1.These reports have been produced in response to Leeds City Councils consultation with regard to the Leeds site allocations plan and in particular to the housing site 3000, Land to the rear of 1-24 Street Lane, Gildersome.

1.2.The reasoning behind this representation is two fold. Firstly, to suggest the creation of a new allocation revising the boundaries suggested by the allocations document to a more logical housing site (see fig 4 in the appendix) and secondly to confirm the ability of both the new site and the original site 3000 to address issues of highways access to the site which is identified within the site allocations document as the reason behind why site 3000 is colour coded amber and not green.

2.Site and Surroundings

2.1 The potential development site is located on land to the rear of 1-24A Street Lane, Gildersome, approximately 800m south of the village centre, and 900m east of the neighbouring village of Drighlington. The site is also located 2.4km west of Morley Town Centre, and 7.5km southwest of Leeds City Centre. The site has been identified as an 'Amber' site by Leeds City Council and is located within the Outer South West Area that encompasses Morley, East and West Ardsley, Beeston, Belle Isle, Drighlington, Gildersome, and Middleton. The majority of the site is made up of Site Ref 3000, and part of the neighbouring site (Site Ref 3064).

2.2 The site is largely a greenfield site used for agricultural purposes. However, to the south side there are 3 industrial starter units, that can be reached using the existing access off Bradford Road. The site access is also used to reach the adjacent electricity substation. The site including the access totals some 2.31 Hectares, using the whole 1.2 Hectares of Site Ref 3000, and 1.11 of Site Ref 3064. The site is bounded by Gildersome Sports and Cricket Club to the north, the remaining section of Site Ref 3064 and a plant hire depot to the west, the residential properties of 1 to 24A Street Lane to the east, and the residential properties off Bradford Road and the electricity substation to the south.

3.The creation of a new site allocation.

3.1 The two site allocations (site 3000 and 3064) have been reviewed to see if a more logical site can be formed that would sit more comfortably within all the planning considerations that form the decision making process within this site allocation process. The resulting revised site can be seen on the accompanying plan (Drawing No: 13054/03). This plan shows an indicative layout that shows how the site could work for illustrative purposes only. Additionally, part of the site to the front which is understood formed part of the SHLAA site 3004 is included to possibly assist with the site access, should this be deemed necessary.

3.2. The creation of this site means that it is within the ownership of two individuals and is readily available should it be allocated as an housing site.

3.3. The revised site is located within the Green Belt and as such, this revised site is now suggested as it provides the best possible site available when assessed against the Green Belt methodology.

3.4 The revised site has physical boundaries to all sides. To the North of the site is a protected playing pitch in the form of Gildersome Sports and Cricket club. This club forms the whole of the Northern boundary and this would prevent further sprawl in a Northward direction (see fig 1 and 2 appendix). The Eastern boundary is formed by housing, again along its entire length (see fig 3 appendix). This also forms the Green Belt boundary as does the Southern boundary, which has an electrical substation and a house with Bradford Road beyond. Finally, the Western boundary is formed by a commercial premises, along two thirds its length, consisting of large buildings and open working areas (see fig 4 appendix). This site also forms the remaining part of site allocation 3064 and if this were to be confirmed as a housing allocation, the revised site proposed here would be totally enclosed by physical development. As it is now, only the Northern part of the Western boundary would form a connection with the more open aspect of the Green Belt beyond and the site would be almost totally enclosed within physical barriers that would prevent further encroachment into the Green Belt.

3.5. As a result, it is considered that in terms of locating housing development within the Green Belt, this revised site would form one of the most acceptable sites within the whole site allocations document due to its enclosed nature and strong physical barriers.

4.Highway access.

4.1 The main issue raised within the site allocations document against site 3000 and 3064 was one of highways and in particular access to the site. This has been dealt with through the accompanying highways report. This demonstrates that access to both site 3000 or the proposed revised site can successfully be achieved to overcome these concerns and that this should not inhibit the site from being included as a Green coded housing allocation.

5.Summary.

5.1 The site is located within the Green Belt as are a large number of the sites proposed within the site allocations document. It appears to be generally accepted that to achieve the numbers of houses that the targets require, it will be inevitable that sites will be required that are located within the Green Belt. It is therefore necessary to find the best sites that have the least impact on the aims of the Green Belt and as described above, the site is considered to be as good as could be found, given its enclosed siting with strong physical boundaries that would prevent further sprawl into the Green Belt.

5.2. Confirmation of the acceptability of the site in highways terms with a good vehicular access as well as excellent multiple pedestrian links suggest that the site is ideally suited to housing development and that its sustainable nature shown within the highways report is further confirmed by the recent approval of a 26 house development (subject to the signing of a section 106 agreement) approximately 200 metres away on the Southern side of Bradford Road.

5.3 As a result, it is considered that the site currently considered as amber in the colour coding system of the site allocations document, should be coded green as it provides a sustainable, accessible site that fulfils best the Green Belt criteria for such sites. It is readily available and whilst obviously within the Green Belt, and therefore not as desirable as brownfield sites in terms of order of delivery, it should still be given a short term delivery phasing due to its availability and its standing as one of the very best Green Belt sites available.

5.4. It is therefore requested that this new site boundary be considered as the preferential manner of dealing with this housing allocation site bringing the most overall benefits and that the site be colour coded green and allocated a short term delivery phasing.

5.5 If this new site is not considered acceptable, then site 3000, using SHLAA site 3004 for access purposes, be considered suitable for housing allocation and that this be colour coded green and allocated a short term delivery phasing

Site Allocations representation for sites 3000 and 3064 of the Outer South West area

Site Allocations representation for sites 3000 and 3064 of the Outer South West area

1.Introduction

1.1.These reports have been produced in response to Leeds City Councils consultation with regard to the Leeds site allocations plan and in particular to the housing site 3000, Land to the rear of 1-24 Street Lane, Gildersome.

1.2.The reasoning behind this representation is two fold. Firstly, to suggest the creation of a new allocation revising the boundaries suggested by the allocations document to a more logical housing site (see fig 4 in the appendix) and secondly to confirm the ability of both the new site and the original site 3000 to address issues of highways access to the site which is identified within the site allocations document as the reason behind why site 3000 is colour coded amber and not green.

2.Site and Surroundings

2.1 The potential development site is located on land to the rear of 1-24A Street Lane, Gildersome, approximately 800m south of the village centre, and 900m east of the neighbouring village of Drighlington. The site is also located 2.4km west of Morley Town Centre, and 7.5km southwest of Leeds City Centre. The site has been identified as an 'Amber' site by Leeds City Council and is located within the Outer South West Area that encompasses Morley, East and West Ardsley, Beeston, Belle Isle, Drighlington, Gildersome, and Middleton. The majority of the site is made up of Site Ref 3000, and part of the neighbouring site (Site Ref 3064).

2.2 The site is largely a greenfield site used for agricultural purposes. However, to the south side there are 3 industrial starter units, that can be reached using the existing access off Bradford Road. The site access is also used to reach the adjacent electricity substation. The site including the access totals some 2.31 Hectares, using the whole 1.2 Hectares of Site Ref 3000, and 1.11 of Site Ref 3064. The site is bounded by Gildersome Sports and Cricket Club to the north, the remaining section of Site Ref 3064 and a plant hire depot to the west, the residential properties of 1 to 24A Street Lane to the east, and the residential properties off Bradford Road and the electricity substation to the south.

3.The creation of a new site allocation.

3.1 The two site allocations (site 3000 and 3064) have been reviewed to see if a more logical site can be formed that would sit more comfortably within all the planning considerations that form the decision making process within this site allocation process. The resulting revised site can be seen on the accompanying plan (Drawing No: 13054/03). This plan shows an indicative layout that shows how the site could work for illustrative purposes only. Additionally, part of the site to the front which is understood formed part of the SHLAA site 3004 is included to possibly assist with the site access, should this be deemed necessary.

3.2. The creation of this site means that it is within the ownership of two individuals and is readily available should it be allocated as an housing site.

3.3. The revised site is located within the Green Belt and as such, this revised site is now suggested as it provides the best possible site available when assessed against the Green Belt methodology.

3.4 The revised site has physical boundaries to all sides. To the North of the site is a protected playing pitch in the form of Gildersome Sports and Cricket club. This club forms the whole of the Northern boundary and this would prevent further sprawl in a Northward direction (see fig 1 and 2 appendix). The Eastern boundary is formed by housing, again along its entire length (see fig 3 appendix). This also forms the Green Belt boundary as does the Southern boundary, which has an electrical substation and a house with Bradford Road beyond. Finally, the Western boundary is formed by a commercial premises, along two thirds its length, consisting of large buildings and open working areas (see fig 4 appendix). This site also forms the remaining part of site allocation 3064 and if this were to be confirmed as a housing allocation, the revised site proposed here would be totally enclosed by physical development. As it is now, only the Northern part of the Western boundary would form a connection with the more open aspect of the Green Belt beyond and the site would be almost totally enclosed within physical barriers that would prevent further encroachment into the Green Belt.

3.5. As a result, it is considered that in terms of locating housing development within the Green Belt, this revised site would form one of the most acceptable sites within the whole site allocations document due to its enclosed nature and strong physical barriers.

4.Highway access.

4.1 The main issue raised within the site allocations document against site 3000 and 3064 was one of highways and in particular access to the site. This has been dealt with through the accompanying highways report. This demonstrates that access to both site 3000 or the proposed revised site can successfully be achieved to overcome these concerns and that this should not inhibit the site form being included as a Green coded housing allocation.

5.Summary.

5.1 The site is located within the Green Belt as are a large number of the sites proposed within the site allocations document. It appears to be generally accepted that to achieve the numbers of houses that the targets require, it will be inevitable that sites will be required that are located within the Green Belt. It is therefore necessary to find the best sites that have the least impact on the aims of the Green Belt and as described above, the site is considered to be as good as could be found, given its enclosed siting with strong physical boundaries that would prevent further sprawl into the Green Belt.

5.2. Confirmation of the acceptability of the site in highways terms with a good vehicular access as well as excellent multiple pedestrian links suggest that the site is ideally suited to housing development and that its sustainable nature shown within the highways report is further confirmed by the recent approval of a 26 house development (subject to the signing of a section 106 agreement) approximately 200 metres away on the Southern side of Bradford Road.

5.3 As a result, it is considered that the site currently considered as amber in the colour coding system of the site allocations document, should be coded green as it provides a sustainable, accessible site that fulfils best the Green Belt criteria for such sites. It is readily available and whilst obviously within the Green Belt, and therefore not as desirable as brownfield sites in terms of order of delivery, it should still be given a short term delivery phasing due to its availability and its standing as one of the very best Green Belt sites available.

5.4. It is therefore requested that this new site boundary be considered as the preferential manner of dealing with this housing allocation site bringing the most overall benefits and that the site be colour coded green and allocated a short term delivery phasing.

5.5 If this new site is not considered acceptable, then site 3000, using SHLAA site 3004 for access purposes, be considered suitable for housing allocation and that this be colour coded green and allocated a short term delivery phasing

1.Introduction

1.1.These reports have been produced in response to Leeds City Councils consultation with regard to the Leeds site allocations plan and in particular to the housing site 3000, Land to the rear of 1-24 Street Lane, Gildersome.

1.2.The reasoning behind this representation is two fold. Firstly, to suggest the creation of a new allocation revising the boundaries suggested by the allocations document to a more logical housing site (see fig 4 in the appendix) and secondly to confirm the ability of both the new site and the original site 3000 to address issues of highways access to the site which is identified within the site allocations document as the reason behind why site 3000 is colour coded amber and not green.

2.Site and Surroundings

2.1 The potential development site is located on land to the rear of 1-24A Street Lane, Gildersome, approximately 800m south of the village centre, and 900m east of the neighbouring village of Drighlington. The site is also located 2.4km west of Morley Town Centre, and 7.5km southwest of Leeds City Centre. The site has been identified as an 'Amber' site by Leeds City Council and is located within the Outer South West Area that encompasses Morley, East and West Ardsley, Beeston, Belle Isle, Drighlington, Gildersome, and Middleton. The majority of the site is made up of Site Ref 3000, and part of the neighbouring site (Site Ref 3064).

2.2 The site is largely a greenfield site used for agricultural purposes. However, to the south side there are 3 industrial starter units, that can be reached using the existing access off Bradford Road. The site access is also used to reach the adjacent electricity substation. The site including the access totals some 2.31 Hectares, using the whole 1.2 Hectares of Site Ref 3000, and 1.11 of Site Ref 3064. The site is bounded by Gildersome Sports and Cricket Club to the north, the remaining section of Site Ref 3064 and a plant hire depot to the west, the residential properties of 1 to 24A Street Lane to the east, and the residential properties off Bradford Road and the electricity substation to the south.

3.The creation of a new site allocation.

3.1 The two site allocations (site 3000 and 3064) have been reviewed to see if a more logical site can be formed that would sit more comfortably within all the planning considerations that form the decision making process within this site allocation process. The resulting revised site can be seen on the accompanying plan (Drawing No: 13054/03). This plan shows an indicative layout that shows how the site could work for illustrative purposes only. Additionally, part of the site to the front which is understood formed part of the SHLAA site 3004 is included to possibly assist with the site access, should this be deemed necessary.

3.2. The creation of this site means that it is within the ownership of two individuals and is readily available should it be allocated as an housing site.

3.3. The revised site is located within the Green Belt and as such, this revised site is now suggested as it provides the best possible site available when assessed against the Green Belt methodology.

3.4 The revised site has physical boundaries to all sides. To the North of the site is a protected playing pitch in the form of Gildersome Sports and Cricket club. This club forms the whole of the Northern boundary and this would prevent further sprawl in a Northward direction (see fig 1 and 2 appendix). The Eastern boundary is formed by housing, again along its entire length (see fig 3 appendix). This also forms the Green Belt boundary as does the Southern boundary, which has an electrical substation and a house with Bradford Road beyond. Finally, the Western boundary is formed by a commercial premises, along two thirds its length, consisting of large buildings and open working areas (see fig 4 appendix). This site also forms the remaining part of site allocation 3064 and if this were to be confirmed as a housing allocation, the revised site proposed here would be totally enclosed by physical development. As it is now, only the Northern part of the Western boundary would form a connection with the more open aspect of the Green Belt beyond and the site would be almost totally enclosed within physical barriers that would prevent further encroachment into the Green Belt.

Site Comments - Outer South West

Site reference: 3064

Housing

Greystone Farm/Bungalow, Wakefield Road, Drighlington

3.5. As a result, it is considered that in terms of locating housing development within the Green Belt, this revised site would form one of the most acceptable sites within the whole site allocations document due to its enclosed nature and strong physical barriers.

4.Highway access.

4.1 The main issue raised within the site allocations document against site 3000 and 3064 was one of highways and in particular access to the site. This has been dealt with through the accompanying highways report. This demonstrates that access to both site 3000 or the proposed revised site can successfully be achieved to overcome these concerns and that this should not inhibit the site from being included as a Green coded housing allocation.

5.Summary.

5.1 The site is located within the Green Belt as are a large number of the sites proposed within the site allocations document. It appears to be generally accepted that to achieve the numbers of houses that the targets require, it will be inevitable that sites will be required that are located within the Green Belt. It is therefore necessary to find the best sites that have the least impact on the aims of the Green Belt and as described above, the site is considered to be as good as could be found, given its enclosed siting with strong physical boundaries that would prevent further sprawl into the Green Belt.

5.2. Confirmation of the acceptability of the site in highways terms with a good vehicular access as well as excellent multiple pedestrian links suggest that the site is ideally suited to housing development and that its sustainable nature shown within the highways report is further confirmed by the recent approval of a 26 house development (subject to the signing of a section 106 agreement) approximately 200 metres away on the Southern side of Bradford Road.

5.3 As a result, it is considered that the site currently considered as amber in the colour coding system of the site allocations document, should be coded green as it provides a sustainable, accessible site that fulfils best the Green Belt criteria for such sites. It is readily available and whilst obviously within the Green Belt, and therefore not as desirable as brownfield sites in terms of order of delivery, it should still be given a short term delivery phasing due to its availability and its standing as one of the very best Green Belt sites available.

5.4. It is therefore requested that this new site boundary be considered as the preferential manner of dealing with this housing allocation site bringing the most overall benefits and that the site be colour coded green and allocated a short term delivery phasing.

5.5 If this new site is not considered acceptable, then site 3000, using SHLAA site 3004 for access purposes, be considered suitable for housing allocation and that this be colour coded green and allocated a short term delivery phasing

Name: Jw Crowther & Son Ltd Jw Crowther & Son Ltd

Representor No: PRS05426

Representation ID: REP06017 Question Ref: H4

H5: Which Amber sites do you disagree with and why?

Our client owns land within site ref 3064 which is also adjacent to site ref 3000, which are identified as amber sites in the Issues and Options Draft Site Allocations Plan as a 'site which has potential but issues or not favoured as a green site' and considers that the land should be colour coded green as a site that is developable for housing.

NPPF Tests of soundness

Paragraph 182 states:

The Local Plan will be examined by an independent inspector whose role is to assess whether the plan has been prepared in accordance with the Duty to Cooperate, legal and procedural requirements, and whether it is sound. A local planning authority should submit a plan for examination which it considers is "sound" – namely that it is:

Positively prepared, Justified, Effective and Consistent with national policy.

Justification

The sites are located to the north of Bradford Road, Gildersome. It is in the south of the village. Drighlington is located a short way to the west. The site is within the outer south-west of Leeds District in a highly sustainable location being close to the aforementioned villages with a decent range of services and amenities (schools, local shopping facilities and restaurants), but is easily accessible to Morley, a town that has a wide range of shops, services and amenities. The site is also just to the north of facilities at Birstall Retail Park which provides a range of shops and restaurants as well as a cinema. The site is well located in terms of the local highway network and is close to Junction 27 of the M62 and the M621.

The land can be accessed via existing access points to the north of Bradford Road, an adopted road which formerly constituted the through road from Morley through Drighlington. The road has been more recently stopped prior to the construction of the new Drighlington bypass and the roundabout/major junction at Gildersome spur. As such road traffic is now minimal within this short road length and services only a limited number of properties. However, the road is significantly wide in terms of individual carriageways and footpaths, but has separation between carriageways relating to its previous role in the road network. The road therefore is capable of handling a substantial volume of traffic and links into the wider network via the B135 and A650.

Our clients land is in single family ownership and is available for development in the short term.

The site is suitable for residential development as an infill development opportunity with built development on three sides and in a very urbanised area close to the Motorway network and significant retail park. The site is in a highly sustainable location within Gildersome, a large village that is well served by local services and facilities (2 Primary Schools, nurseries, a Co-operative foodstore, an indian restaurant, various eateries/takeaways, public houses, clubs, a library and community centre and a Sure Start Children's Centre). It is also close to Drighlington which has a similar range of facilities and amenities. It is very close to key bus routes with stops in easy walking distance to the east and the west. There are playing fields to the east and a cricket club to the north. Morley is close by which is a key town in the south of Leeds that is served by a substantial range of schools, shops, leisure, services and facilities. To the immediate south of the Motorway is the Birstall Retail Park.

The site is achievable as it is located in a highly sustainable location and is in single family ownership. The owners are willingly promoting the land for development. The site can come forward for development within 5 years and certainly can be developed during the Plan Period.

Proposed Change

The sites reference 3064 and 3000 should be identified within the Site Allocations plan as 'green' sites as having 'greatest potential to be allocated for housing'.

Representation ID: REP06017 Question Ref: H4

Representation ID: REP06563 Question Ref: H4

Suggested sites from Amber to Red;

- 309
- 1067B
- 1069
- 1143F
- 1220A
- 1274
- 1275A
- 1279
- 1332
- 2105
- 2155
- 3000
- 3064
- 3078A
- 4004

These sites are almost all located within the existing Green Belt and expansion into the Green Belt would lead to increased urban sprawl between the various townships in the Outer South West, and lead to coalescence between communities

Development of the Green Belt sites would also reduce the open green area and provide encroachment into the countryside around Morley and other smaller townships.

In addition there is insufficient road capacity and little scope for expansion for other necessary services. There would be a requirement for new or upgrading of existing roads which would therefore favour development on sites that are already located within the Morley or the Leeds Urban areas rather than eroding the Green Belt further.

Site 3078A is close to potential development in Kirklees and could lead to the complete erosion of the Green Belt and open green space between Leeds and Kirklees.

Any further development at sites 1275A and 1279 would reduce the Green Belt between the existing residential boundary and the A653 Dewsbury Road to a narrow strip which would put pressure in future years to extend residential use further east.

See rep for full details.

Housing

Greystone Farm/Bungalow, Wakefield Road, Drighlington

Name: Liongate Developments Limited

Representor No: PRS06410

Representation ID: REP07389 Question Ref: H4

Site 3064

We regard our client's site as a sustainable option for a future residential allocation on the basis that the Site is well related to the existing built-up area of Gildersome and is in a location that provides easy access to key local services including shops, banks and schools; many within Gildersome itself and others in nearby Morley. The Site is also located in an area with a good public transport service with a bus stop around 250m from the site with services to Leeds City Centre, Huddersfield, Morley, Dewsbury and Birstall (routes 209 and 219). As a result of this it is

considered that a housing allocation on the site would be consistent with paragraphs 17, 34, 47 and 52 of the NPPF (detailed above) and draft Spatial Policy 6 of the emerging Core Strategy.

Paragraph 7 of the NPPF identifies three specific but interrelated roles that need to be considered; these are economic, social and environmental. It is considered that in the case of our client's site that it could contribute to all three of these roles by:

- Contributing to building a strong economy by ensuring sufficient land is available for housing which can be utilised by the local workforce, now and in the future and that new residents can help sustain existing local businesses in the area;
- Being capable of delivering much needed housing within this area of Leeds and is capable of offering an appropriate mix of housing sizes and types and so can make a positive impact on social and well-being; and
- Being a relatively unconstrained Site that is capable of addressing any environmental issue that may be associated with its redevelopment.

Site Specific Considerations

The assessment of the Site within the Council's SHLAA, along with the accompanying analysis within the draft Site Allocation Plan generally considers the Site favourably as a future residential allocation. Nevertheless two constraints are noted and are the reason why the Site is currently classified as amber. These constraints are:

- The Site's access
- The Site's current Green Belt designation.

Site Access

To explore site access in more detail we instructed PAH Highway Consultants Ltd to analyse the Site and to assess its potential for providing a safe and acceptable access. Their assessment is appended to this letter as Annex 1 and concludes that a safe and adequate access arrangement can be achieved off Bradford Road to serve residential accommodation and in doing so addresses Paragraph 34 of the NPPF.

This demonstrates that a viable access on to the Site can be achieved and so should no longer be regarded as a constraint when considering it as a future residential allocation.

Green Belt

The Green Belt assessment covers the criteria outlined within paragraph 80 of the NPPF to ascertain each site's suitability for removal. Overall our client's site performs well when judged against the criteria; in particular the assessment notes that the Site:

- Is well connected to built-up area;
- Has a low potential for unrestricted sprawl;
- Will not result in the merging of two settlements; and
- Provides an opportunity to 'round-off' the settlement.

Nevertheless for completeness we have also undertaken our own Green Belt assessment of the site below using the Council's pro-forma contained in Appendix 1 of the Site Allocations Plan Issues and Options draft [see rep for full Green Belt assessment].

Our own assessment is consistent with the Council's and concludes that the Site should be favoured for removal from the Green Belt on the basis that it scores well against the above criteria.

Summary of Site Specific Analysis

Our own analysis of the site specific constraints identified show the Site is both capable of providing a sufficient access and that it is a suitable candidate for removal from the Green Belt. This provides further justification that the Site should be considered positively as a housing allocation within the Site Allocations Plan.

1. Housing Sites

In order to assess the site we have considered the following accessibility criteria:

- Access to the Core Bus Network- within 400m of 4 buses per hour to Leeds, Wakefield or Bradford;
- 20 minutes to primary health;
- 20 minutes to primary education;
- 30 minutes to a secondary school.

The assessments undertaken are based on the current public transport network. For this consultation Metro have compared the outputs of these accessibility criteria against the RAG classifications given by the council. The results for the housing sites are shown in proceeding tables:

Table 1 -Green sites with poor accessibility

Table 2- Amber sites with poor accessibility

Table 3- Red sites with poor accessibility

Table 4- Green and Amber Sites within the Core Public Transport Network

Table 5- Red Sites within the Core Public Transport Network

[See full representation submitted for details of the tables]

Amber Sites outside the Core Public Transport Network

Table 2 below contains sites that are classified as 'Sites which have potential but issues or not as favoured as green sites' but fall outside 400m of the current core bus network. Consideration needs to be given to if this site would be able to meet the LDF public transport accessibility requirements should housing be brought forward. We are be minded to recommend that these site were not prioritised for housing until other more accessible site have been considered. Sites which fall marginally outside the 400m catchments and have high bus frequencies or are small low capacity sites are less of concern but are flagged up nonetheless.

Housing

Valley Road, Morley

Name: Persimmon Homes

Representor No: PRS05691

Representation ID: REP06835 Question Ref: H7

Site 3068

Persimmon does not agree with the red assessment of the site.

The basis of the Council's red rating is the sites location within the Green Belt and concerns about its isolation and access requirements. In reality, this site will come forward as a comprehensive masterplan with Sites 1282 and 1283 and will be a later phase once the requisite access infrastructure has been put in place.

Check the unrestricted sprawl of large built up areas.

The sprawl of Morley will be maintained by the railway line to the east. This is a defensible boundary and will, therefore, maintain separation between Morley and Middleton.

Prevent neighbouring towns from merging into one another.

The merging of Morley and Middleton will be prevented by the railway line to the east. This is a defensible boundary and will, therefore, maintain separation between Morley and Middleton.

Safeguarding the countryside from encroachment

Encroachment into the countryside will be restricted by the railway line.

Preserve the setting and special character of historic towns

The land north of Valley Mills does not contribute to the setting and special character of a historic town.

Assist urban regeneration

Releasing this site from the Green Belt for housing will contribute to a demonstrable need for housing in Morley that cannot be met fully by existing sites not identified as Green Belt.

We recommend the Council:

- Clarifies how it has assessed the distance to the rail station and nearest bus stop.
- States that the site is available, suitable and achievable.
- States that the development of this site conforms with the Core Strategy and is major settlement extension, along with site ref: 1283.
- Provide further information on what has been used to rank the site.

See rep for full details

Representation ID: REP06835 Question Ref: H11

We consider that site 3068 is available immediately for development. Therefore we consider development can be achieved on the sites in the short term i.e. within 5 years and leading into the medium to longer term.

Wide Lane/Dewsbury Road, Morley

Name: Mavis & Geoff Pell

Representor No: PRS00594

Representation ID: REP02553 Question Ref: H7

3069 Wide Lane - Amber to Red

Traffic

The volume of traffic using Wide Lane is extremely high. The council has installed two central islands and speed bumps adjacent to the entrance/exit of the Topcliffe estate to provide some means for the pedestrians to cross this 'river of death', I was going to say 'safely', however that is not the case since no definite break in traffic is provided. Presumably traffic lights are too expensive?

When driving, trying to exit the Topcliffe estate and enter the traffic flow can be quite a time consuming exercise, especially turning right during peak traffic times.

This again is the current situation not post development!

Wide Lane meets Dewsbury Lane, again an inordinately busy dual carriageway. Since the opening of the White Rose Centre the volume of traffic along this highway has increased massively and at peak times along with weekend shopping traffic this road cannot cope with extra traffic volumes and additional housing development will again exacerbate this situation.

Infrastructure

Medical services in the Morley area are already overstretched. Dental practices have no vacancies for additional patients. I know of people who have to attend practices at the other side of Leeds because of the local situation.

Doctors surgeries are close to the same situation with waiting times for an appointment spiralling.

Public transport (which for the area under consideration means bus service) is suffering along with all other road users from the increased volume of traffic and the condition of the road surfaces in this and the surrounding areas.

Roads are literally crumbling under the massive volume of traffic and there seems no coordinated scheme in place to effect repairs.

If the LDF is put in place by Leeds City Council, Morley will be as large as Harrogate but whereas Harrogate has its own hospital and full time fire service, Morley has neither.

Schools

It has already been stated in the local media that Morley secondary schools will be at 'full capacity' by 2016 and that does not take into account any new housing development in the area. Newlands Primary School is being rebuilt and expanded but again, the additional 250 places will only accommodate children already in the system.

Parking

The official estimate that every house will have 0.6 cars is farcical, most cars on modern estates have 2 to 3 cars and parking these additional cars is becoming a severe problem resulting in congested streets within the estates.

The Topcliffe estate off wide lane is a perfect example of this problem and householders there have been warned by the fire service that in the event of a fire lives could be at risk because of cars parked on both sides of the streets limiting access for the fire engines.

Surely the planners must know that the horse goes 'in front of the cart' and realise that the infrastructure of the area should be put in place to give a workable system before additional population expansion to avoid catastrophic overcrowding and misplacements which will only serve to worsen our already cramped living standards.

Infrastructure not capable of supporting expansion.

Medical services in the Morley area are already overstretched. Dental practices have no vacancies for additional patients. I know of people who have to attend practices at the other side of Leeds because of the local situation.

Doctors surgeries are close to the same situation with waiting times for an appointment spiralling.

Public transport (which for the area under consideration means bus service) is suffering along with all other road users from the increased volume of traffic and the condition of the road surfaces in this and the surrounding areas.

Roads are literally crumbling under the massive volume of traffic and there seems no coordinated scheme in place to effect repairs.

If the LDF is put in place by Leeds City Council, Morley will be as large as Harrogate but whereas Harrogate has its own hospital and full time fire service, Morley has neither.

Schools

It has already been stated in the local media that Morley secondary schools will be at 'full capacity' by 2016 and that does not take into account any new housing development in the area. Newlands Primary School is being rebuilt and expanded but again, the additional 250 places will only accommodate children already in the system.

Parking

The official estimate that every house will have 0.6 cars is farcical, most cars on modern estates have 2 to 3 cars and parking these additional cars is becoming a severe problem resulting in congested streets within the estates.

The Topcliffe estate off wide lane is a perfect example of this problem and householders there have been warned by the fire service that in the event of a fire lives could be at risk because of cars parked on both sides of the streets limiting access for the fire engines.

Surely the planners must know that the horse goes 'in front of the cart' and realise that the infrastructure of the area should be put in place to give a workable system before additional population expansion to avoid catastrophic overcrowding and misplacements which will only serve to worsen our already cramped living standards.

3069 Wide Lane - Red

Infrastructure not capable of supporting expansion

Traffic

The volume of traffic using Wide Lane is extremely high. The council has installed two central islands and speed bumps adjacent to the entrance/exit of the Topcliffe estate to provide some means for the pedestrians to cross this 'river of death', I was going to say 'safely', however that is not the case since no definite break in traffic is provided. Presumably traffic lights are too expensive?

When driving, trying to exit the Topcliffe estate and enter the traffic flow can be quite a time consuming exercise, especially turning right during peak traffic times.

This again is the current situation not post development!

Wide Lane meets Dewsbury Lane, again an inordinately busy dual carriageway. Since the opening of the White Rose Centre the volume of traffic along this highway has increased massively and at peak times along with weekend shopping traffic this road cannot cope with extra traffic volumes and additional housing development will again exacerbate this situation.

Infrastructure

Medical services in the Morley area are already overstretched. Dental practices have no vacancies for additional patients. I know of people who have to attend practices at the other side of Leeds because of the local situation.

Doctors surgeries are close to the same situation with waiting times for an appointment spiralling.

3069 Wide Lane - Red

Infrastructure not capable of supporting expansion

Traffic

The volume of traffic using Wide Lane is extremely high. The council has installed two central islands and speed bumps adjacent to the entrance/exit of the Topcliffe estate to provide some means for the pedestrians to cross this 'river of death', I was going to say 'safely', however that is not the case since no definite break in traffic is provided. Presumably traffic lights are too expensive?

When driving, trying to exit the Topcliffe estate and enter the traffic flow can be quite a time consuming exercise, especially turning right during peak traffic times.

This again is the current situation not post development!

Wide Lane meets Dewsbury Lane, again an inordinately busy dual carriageway. Since the opening of the White Rose Centre the volume of traffic along this highway has increased massively and at peak times along with weekend shopping traffic this road cannot cope with extra traffic volumes and additional housing development will again exacerbate this situation.

Infrastructure

Medical services in the Morley area are already overstretched. Dental practices have no vacancies for additional patients. I know of people who have to attend practices at the other side of Leeds because of the local situation.

Doctors surgeries are close to the same situation with waiting times for an appointment spiralling.

Public transport (which for the area under consideration means bus service) is suffering along with all other road users from the increased volume of traffic and the condition of the road surfaces in this and the surrounding areas.

Roads are literally crumbling under the massive volume of traffic and there seems no coordinated scheme in place to effect repairs.

If the LDF is put in place by Leeds City Council, Morley will be as large as Harrogate but whereas Harrogate has its own hospital and full time fire service, Morley has neither.

Schools

It has already been stated in the local media that Morley secondary schools will be at 'full capacity' by 2016 and that does not take into account any new housing development in the area. Newlands Primary School is being rebuilt and expanded but again, the additional 250 places will only accommodate children already in the system.

Parking

The official estimate that every house will have 0.6 cars is farcical, most cars on modern estates have 2 to 3 cars and parking these additional cars is becoming a severe problem resulting in congested streets within the estates.

The Topcliffe estate off wide lane is a perfect example of this problem and householders there have been warned by the fire service that in the event of a fire lives could be at risk because of cars parked on both sides of the streets limiting access for the fire engines.

Surely the planners must know that the horse goes 'in front of the cart' and realise that the infrastructure of the area should be put in place to give a workable system before additional population expansion to avoid catastrophic overcrowding and misplacements which will only serve to worsen our already cramped living standards.

Newlands Primary School is being rebuilt and expanded but again, the additional 250 places will only accommodate children already in the system.

Parking

The official estimate that every house will have 0.6 cars is farcical, most cars on modern estates have 2 to 3 cars and parking these additional cars is becoming a severe problem resulting in congested streets within the estates.

The Topcliffe estate off wide lane is a perfect example of this problem and householders there have been warned by the fire service that in the event of a fire lives could be at risk because of cars parked on both sides of the streets limiting access for the fire engines.

Surely the planners must know that the horse goes 'in front of the cart' and realise that the infrastructure of the area should be put in place to give a workable system before additional population expansion to avoid catastrophic overcrowding and misplacements which will only serve to worsen our already cramped living standards.

3069 Wide Lane - Red

Infrastructure not capable of supporting expansion

Traffic

The volume of traffic using Wide Lane is extremely high. The council has installed two central islands and speed bumps adjacent to the entrance/exit of the Topcliffe estate to provide some means for the pedestrians to cross this 'river of death', I was going to say 'safely', however that is not the case since no definite break in traffic is provided. Presumably traffic lights are too expensive?

When driving, trying to exit the Topcliffe estate and enter the traffic flow can be quite a time consuming exercise, especially turning right during peak traffic times.

This again is the current situation not post development!

Wide Lane meets Dewsbury Lane, again an inordinately busy dual carriageway. Since the opening of the White Rose Centre the volume of traffic along this highway has increased massively and at peak times along with weekend shopping traffic this road cannot cope with extra traffic volumes and additional housing development will again exacerbate this situation.

Infrastructure

Medical services in the Morley area are already overstretched. Dental practices have no vacancies for additional patients. I know of people who have to attend practices at the other side of Leeds because of the local situation.

Doctors surgeries are close to the same situation with waiting times for an appointment spiralling.

Public transport (which for the area under consideration means bus service) is suffering along with all other road users from the increased volume of traffic and the condition of the road surfaces in this and the surrounding areas.

Roads are literally crumbling under the massive volume of traffic and there seems no coordinated scheme in place to effect repairs.

If the LDF is put in place by Leeds City Council, Morley will be as large as Harrogate but whereas Harrogate has its own hospital and full time fire service, Morley has neither.

Schools

It has already been stated in the local media that Morley secondary schools will be at 'full capacity' by 2016 and that does not take into account any new housing development in the area. Newlands Primary School is being rebuilt and expanded but again, the additional 250 places will only accommodate children already in the system.

Parking

The official estimate that every house will have 0.6 cars is farcical, most cars on modern estates have 2 to 3 cars and parking these additional cars is becoming a severe problem resulting in congested streets within the estates.

Since the opening of the White Rose Centre the volume of traffic along this highway has increased massively and at peak times along with weekend shopping traffic this road cannot cope with extra traffic volumes and additional housing development will again exacerbate this situation.

Infrastructure

Medical services in the Morley area are already overstretched. Dental practices have no vacancies for additional patients. I know of people who have to attend practices at the other side of Leeds because of the local situation.

Doctors surgeries are close to the same situation with waiting times for an appointment spiralling.

Public transport (which for the area under consideration means bus service) is suffering along with all other road users from the increased volume of traffic and the condition of the road surfaces in this and the surrounding areas.

Roads are literally crumbling under the massive volume of traffic and there seems no coordinated scheme in place to effect repairs.

If the LDF is put in place by Leeds City Council, Morley will be as large as Harrogate but whereas Harrogate has its own hospital and full time fire service, Morley has neither.

Schools

It has already been stated in the local media that Morley secondary schools will be at 'full capacity' by 2016 and that does not take into account any new housing development in the area. Newlands Primary School is being rebuilt and expanded but again, the additional 250 places will only accommodate children already in the system.

Parking

The official estimate that every house will have 0.6 cars is farcical, most cars on modern estates have 2 to 3 cars and parking these additional cars is becoming a severe problem resulting in congested streets within the estates.

The Topcliffe estate off wide lane is a perfect example of this problem and householders there have been warned by the fire service that in the event of a fire lives could be at risk because of cars parked on both sides of the streets limiting access for the fire engines.

Surely the planners must know that the horse goes 'in front of the cart' and realise that the infrastructure of the area should be put in place to give a workable system before additional population expansion to avoid catastrophic overcrowding and misplacements which will only serve to worsen our already cramped living standards.

3069 Wide Lane - Red

Infrastructure not capable of supporting expansion

Traffic

The volume of traffic using Wide Lane is extremely high. The council has installed two central islands and speed bumps adjacent to the entrance/exit of the Topcliffe estate to provide some means for the pedestrians to cross this 'river of death', I was going to say 'safely', however that is not the case since no definite break in traffic is provided. Presumably traffic lights are too expensive?

When driving, trying to exit the Topcliffe estate and enter the traffic flow can be quite a time consuming exercise, especially turning right during peak traffic times.

This again is the current situation not post development!

Wide Lane meets Dewsbury Lane, again an inordinately busy dual carriageway. Since the opening of the White Rose Centre the volume of traffic along this highway has increased massively and at peak times along with weekend shopping traffic this road cannot cope with extra traffic volumes and additional housing development will again exacerbate this situation.

3069 Wide Lane - Red

Infrastructure not capable of supporting expansion

Traffic

The volume of traffic using Wide Lane is extremely high. The council has installed two central islands and speed bumps adjacent to the entrance/exit of the Topcliffe estate to provide some means for the pedestrians to cross this 'river of death', I was going to say 'safely', however that is not the case since no definite break in traffic is provided. Presumably traffic lights are too expensive?

When driving, trying to exit the Topcliffe estate and enter the traffic flow can be quite a time consuming exercise, especially turning right during peak traffic times.

This again is the current situation not post development!

Wide Lane meets Dewsbury Lane, again an inordinately busy dual carriageway. Since the opening of the White Rose Centre the volume of traffic along this highway has increased massively and at peak times along with weekend shopping traffic this road cannot cope with extra traffic volumes and additional housing development will again exacerbate this situation.

Infrastructure

Medical services in the Morley area are already overstretched. Dental practices have no vacancies for additional patients. I know of people who have to attend practices at the other side of Leeds because of the local situation.

Doctors surgeries are close to the same situation with waiting times for an appointment spiralling.

Public transport (which for the area under consideration means bus service) is suffering along with all other road users from the increased volume of traffic and the condition of the road surfaces in this and the surrounding areas.

Roads are literally crumbling under the massive volume of traffic and there seems no coordinated scheme in place to effect repairs.

If the LDF is put in place by Leeds City Council, Morley will be as large as Harrogate but whereas Harrogate has its own hospital and full time fire service, Morley has neither.

Schools

It has already been stated in the local media that Morley secondary schools will be at 'full capacity' by 2016 and that does not take into account any new housing development in the area. Newlands Primary School is being rebuilt and expanded but again, the additional 250 places will only accommodate children already in the system.

Parking

The official estimate that every house will have 0.6 cars is farcical, most cars on modern estates have 2 to 3 cars and parking these additional cars is becoming a severe problem resulting in congested streets within the estates.

The Topcliffe estate off wide lane is a perfect example of this problem and householders there have been warned by the fire service that in the event of a fire lives could be at risk because of cars parked on both sides of the streets limiting access for the fire engines.

Surely the planners must know that the horse goes 'in front of the cart' and realise that the infrastructure of the area should be put in place to give a workable system before additional population expansion to avoid catastrophic overcrowding and misplacements which will only serve to worsen our already cramped living standards.

Public transport (which for the area under consideration means bus service) is suffering along with all other road users from the increased volume of traffic and the condition of the road surfaces in this and the surrounding areas.

Roads are literally crumbling under the massive volume of traffic and there seems no coordinated scheme in place to effect repairs.

If the LDF is put in place by Leeds City Council, Morley will be as large as Harrogate but whereas Harrogate has its own hospital and full time fire service, Morley has neither.

Schools

It has already been stated in the local media that Morley secondary schools will be at 'full capacity' by 2016 and that does not take into account any new housing development in the area. Newlands Primary School is being rebuilt and expanded but again, the additional 250 places will only accommodate children already in the system.

Parking

The official estimate that every house will have 0.6 cars is farcical, most cars on modern estates have 2 to 3 cars and parking these additional cars is becoming a severe problem resulting in congested streets within the estates.

The Topcliffe estate off wide lane is a perfect example of this problem and householders there have been warned by the fire service that in the event of a fire lives could be at risk because of cars parked on both sides of the streets limiting access for the fire engines.

Surely the planners must know that the horse goes 'in front of the cart' and realise that the infrastructure of the area should be put in place to give a workable system before additional population expansion to avoid catastrophic overcrowding and misplacements which will only serve to worsen our already cramped living standards.

3069 Wide Lane - Red

Infrastructure not capable of supporting expansion

Traffic

The volume of traffic using Wide Lane is extremely high. The council has installed two central islands and speed bumps adjacent to the entrance/exit of the Topcliffe estate to provide some means for the pedestrians to cross this 'river of death', I was going to say 'safely', however that is not the case since no definite break in traffic is provided. Presumably traffic lights are too expensive?

When driving, trying to exit the Topcliffe estate and enter the traffic flow can be quite a time consuming exercise, especially turning right during peak traffic times.

This again is the current situation not post development!

Wide Lane meets Dewsbury Lane, again an inordinately busy dual carriageway. Since the opening of the White Rose Centre the volume of traffic along this highway has increased massively and at peak times along with weekend shopping traffic this road cannot cope with extra traffic volumes and additional housing development will again exacerbate this situation.

Infrastructure

Medical services in the Morley area are already overstretched. Dental practices have no vacancies for additional patients. I know of people who have to attend practices at the other side of Leeds because of the local situation.

Doctors surgeries are close to the same situation with waiting times for an appointment spiralling.

Public transport (which for the area under consideration means bus service) is suffering along with all other road users from the increased volume of traffic and the condition of the road surfaces in this and the surrounding areas.

Roads are literally crumbling under the massive volume of traffic and there seems no coordinated scheme in place to effect repairs.

Traffic

The volume of traffic using Wide Lane is extremely high. The council has installed two central islands and speed bumps adjacent to the entrance/exit of the Topcliffe estate to provide some means for the pedestrians to cross this 'river of death', I was going to say 'safely', however that is not the case since no definite break in traffic is provided. Presumably traffic lights are too expensive?

When driving, trying to exit the Topcliffe estate and enter the traffic flow can be quite a time consuming exercise, especially turning right during peak traffic times.

This again is the current situation not post development!

Wide Lane meets Dewsbury Lane, again an inordinately busy dual carriageway. Since the opening of the White Rose Centre the volume of traffic along this highway has increased massively and at peak times along with weekend shopping traffic this road cannot cope with extra traffic volumes and additional housing development will again exacerbate this situation.

Infrastructure

Medical services in the Morley area are already overstretched. Dental practices have no vacancies for additional patients. I know of people who have to attend practices at the other side of Leeds because of the local situation.

Doctors surgeries are close to the same situation with waiting times for an appointment spiralling.

Public transport (which for the area under consideration means bus service) is suffering along with all other road users from the increased volume of traffic and the condition of the road surfaces in this and the surrounding areas.

Roads are literally crumbling under the massive volume of traffic and there seems no coordinated scheme in place to effect repairs.

If the LDF is put in place by Leeds City Council, Morley will be as large as Harrogate but whereas Harrogate has its own hospital and full time fire service, Morley has neither.

Schools

It has already been stated in the local media that Morley secondary schools will be at 'full capacity' by 2016 and that does not take into account any new housing development in the area. Newlands Primary School is being rebuilt and expanded but again, the additional 250 places will only accommodate children already in the system.

Parking

The official estimate that every house will have 0.6 cars is farcical, most cars on modern estates have 2 to 3 cars and parking these additional cars is becoming a severe problem resulting in congested streets within the estates.

The Topcliffe estate off wide lane is a perfect example of this problem and householders there have been warned by the fire service that in the event of a fire lives could be at risk because of cars parked on both sides of the streets limiting access for the fire engines.

Surely the planners must know that the horse goes 'in front of the cart' and realise that the infrastructure of the area should be put in place to give a workable system before additional population expansion to avoid catastrophic overcrowding and misplacements which will only serve to worsen our already cramped living standards.

Parking

The official estimate that every house will have 0.6 cars is farcical, most cars on modern estates have 2 to 3 cars and parking these additional cars is becoming a severe problem resulting in congested streets within the estates.

The Topcliffe estate off wide lane is a perfect example of this problem and householders there have been warned by the fire service that in the event of a fire lives could be at risk because of cars parked on both sides of the streets limiting access for the fire engines.

Surely the planners must know that the horse goes 'in front of the cart' and realise that the infrastructure of the area should be put in place to give a workable system before additional population expansion to avoid catastrophic overcrowding and misplacements which will only serve to worsen our already cramped living standards.

3069 Wide Lane - Red

Infrastructure not capable of supporting expansion

Traffic

The volume of traffic using Wide Lane is extremely high. The council has installed two central islands and speed bumps adjacent to the entrance/exit of the Topcliffe estate to provide some means for the pedestrians to cross this 'river of death', I was going to say 'safely', however that is not the case since no definite break in traffic is provided. Presumably traffic lights are too expensive?

When driving, trying to exit the Topcliffe estate and enter the traffic flow can be quite a time consuming exercise, especially turning right during peak traffic times.

This again is the current situation not post development!

Wide Lane meets Dewsbury Lane, again an inordinately busy dual carriageway. Since the opening of the White Rose Centre the volume of traffic along this highway has increased massively and at peak times along with weekend shopping traffic this road cannot cope with extra traffic volumes and additional housing development will again exacerbate this situation.

Infrastructure

Medical services in the Morley area are already overstretched. Dental practices have no vacancies for additional patients. I know of people who have to attend practices at the other side of Leeds because of the local situation.

Doctors surgeries are close to the same situation with waiting times for an appointment spiralling.

Public transport (which for the area under consideration means bus service) is suffering along with all other road users from the increased volume of traffic and the condition of the road surfaces in this and the surrounding areas.

Roads are literally crumbling under the massive volume of traffic and there seems no coordinated scheme in place to effect repairs.

If the LDF is put in place by Leeds City Council, Morley will be as large as Harrogate but whereas Harrogate has its own hospital and full time fire service, Morley has neither.

Schools

It has already been stated in the local media that Morley secondary schools will be at 'full capacity' by 2016 and that does not take into account any new housing development in the area. Newlands Primary School is being rebuilt and expanded but again, the additional 250 places will only accommodate children already in the system.

Parking

The official estimate that every house will have 0.6 cars is farcical, most cars on modern estates have 2 to 3 cars and parking these additional cars is becoming a severe problem resulting in congested streets within the estates.

The Topcliffe estate off wide lane is a perfect example of this problem and householders there have been warned by the fire service that in the event of a fire lives could be at risk because of cars parked on both sides of the streets limiting access for the fire engines.
